

Request

Please advise:-

- 1) If you have a schedule for clearing gullies on residential roads and if so the frequency with which this work is carried out.
- 2) Is your maintenance work for clearing gullies carried by a contractor or your own staff?
- 3) What type of equipment is used? Eg do you own a gully sucker? Or do your contractors use a gully sucker?
- 4) Have you used new technology for your gully clearing? If so, please give details. Specifically have you used In Touch Ltd SmartWater sensors or do you have plans to do so? If so, what, if any, reductions in cost and/or reductions in blockages have resulted?

Response

General cyclic gully cleaning on residential roads is every three years.

In-house teams, with occasional support from contractor.

Gully Tanker; Jetter; CCTV

We are currently trialling InTouch Sensors. We do not have any reduction/savings data at this moment in time.
