## **Request**

Could you please supply me with information regarding traffic management licences and Street work licences.

In particular I require to know the date of the application, the details, and the date they were authorised and any conditions attached, for the following location and time scale. The B5207 Bryn Road, Wigan. From its junction with Nicol Road up to and including its junction with the A49 Wigan Road. During the timescale of the intended works to take place between 1-4-25 up to present day. I have tried to keep the parameters quite small so as not to create too much work.

I am aware of resurfacing work that required a full closure of Bryn Road that is of interest. Especially the dates the closure was in force etc. There is currently work being done on Bryn Road, that I believe is in relation to the Meridian 6 which I am also interested. Especially the application details and date, authorisation, dates implemented, extent of authorisation, any conditions. Any other works during the above time scale

## **Response**

I have attached data to show works scheduled/completed during the required period. The closure details for resurfacing are shown in this spreadsheet.

The permit for Ameen is a Section 50 licence for new apparatus in the highway, these permits are input by Wigan Council Streetworks personnel, therefore the dates aren't representative of the initial conversations around the work. The application for the electric connection was made via site meeting held on 1<sup>st</sup> July 2025 and followed up in writing. At the time of application, resurfacing works had already begun on Bryn Road. In addition to statutory permit conditions, shown on the attached spreadsheet for manning of temporary traffic lights and 7 day working, agreement is also in place that the carriageway must be resurfaced from centre line to kerb edge on completion of the work, thus restoring the carriageway to the new condition it was in before work began.
