

## **Request**

My research focuses on the long-term impact of local spending on public services, such as police and education. I am thus interested in collecting information on local authorities' revenue expenditure and financing data since the early 2000s.

I am aware that these data are publicly available on the UK government website starting from the financial year 2007/08, but I would be interested in accessing data for earlier years.

Specifically, under the FOI legislation, I seek local authorities' revenue expenditure and financing data broken down by standard categories (education, housing, police, roads, health services, etc.) for the period spanning the financial years 1999/2000 to 2006/2007.

Ideally, I would like to access a data set organized in the same way as the publicly available data. If this was not possible, I would like to obtain a document containing the following columns:

Name of the local authority.

ONS statistical local authority identifier (preferably if it was the 2000 identifier, but either the 2011 or 2021 are also fine, but please, indicate which one you are using); Income available for educational services Expenditure made for educational services Same two columns (income and expenditure) for other budget items, such as housing, police, roads, social care, etc. One row per year.

## **Response**

Data from 1999/2000 to 2003/2004 is no longer available due to the amount of time passed.

Data from 2004/2005 to 2006/2007 is provided in the attached document in the format submitted to Central Government as part of the Revenue Outturn report.
