- 2nd Response to Wigan Council (WC) comments (i.e. [redacted] comments dated 16 Jan 2024) – Doc ref: 21714-HYD-XX-XX-RP-TP-1003.P02
- 3rd Response to WC comments (i.e. [redacted] comments dated 11 Feb 2024) – Doc ref: 21714-HYD-XX-XX-RP-TP-1004.P02
- SCC Response (i.e. SCC's comments dated 19 Jan 2024) – Doc ref: 21714-HYD-XX-XX-RP-TP-1005.P01

We have submitted the responses as 3 x separate technical notes as we feel it would be easier for the different parties to review/address, given the number of appendices also included within the individual documents.

In terms of addressing the Mosley Common junction point, Hydrock have included the following paragraph in the '3rd WC response' document which should provide sufficient justification / comfort as to why the junction has not been assessed:

Para 2.3.4 - Notwithstanding the above, Hydrock have reviewed their Traffic Flow Figures (which were previously provided along with the previously submitted TA as part of the application), and identified that the only junction within close proximity of the Mosley common site impacted by the proposed development flows is the A580 / A577 junction. However, as shown in our Traffic Flows figures, the total 2-way vehicle trips (associated with the proposed development) travelling along the A580 to/from the A580 / A577 junction only equates to 19 in the AM peak, and 23 in the PM peak, which is less than the 30+vehicle 2-way trips assessment criteria suggested by WCC. Therefore, this junction was not requested to be assessed. Furthermore, it should also be noted that this junction was also recently upgraded in 2023.

We would hope it isn't necessary given the clarity provided in the various notes/responses but if a meeting is required to resolve any residual matters following review of the above, please can you coordinate as soon as feasibly possible.

Please can you confirm receipt and please can you re-consult the three parties and request their urgent review of the above/attached and confirmation that highways matters are indeed now resolved so that we can move forward to Committee.

Kind regards

Subject: A/23/96226/MAJOR Astley Business Park, Wigan

Good afternoon [redacted]

Apologies for the delay in providing an update for you but I can confirm that my highway colleagues have held further discussions earlier this week as planned, and the outcomes of those discussions have been shared with [redacted] and myself.

Taking all matters into account, I remain of the view that the points raised below must be addressed in full before Officers can make a positive recommendation to Members; the only exception to this is the reference made to the Mosley Common application. I accept that this was not a committed development when the application was submitted (nor did the Mosley Common application take this application into account in their transport studies). However, I would advise that providing some commentary on the combined impacts (now that it is a committed development) may provide some additional comfort to Members.

I appreciate that some of the points below were addressed in the Technical Note received early last week but it would be appreciated if this could be combined with a full response on all other points for publication and re-consultation.

The information is necessary to ensure that Officers can confirm that the proposed development is acceptable in highway terms and confidently relay this to Members. It is important to note that this application has attracted 100+ objections from local residents, a call in from local Councillors and an objection from James Grundy MP. One of the common themes running through all of these is the impact on the local highway network and as such, taking the application before Members at the present time and in advance of all matters raised by [redacted] and Salford Council being addressed, raises a significant possibility that Members could overturn or defer the application.

I appreciate that issues have been raised that were not done so at the pre-application stage and whilst that is regrettable, it is not a reason to move past them without addressing them in full to ensure that when this application is reported to Members, Officers can be confident of our positive recommendation being accepted.

On other matters, I can confirm receipt of the CGIs earlier this week. In addition, I have requested some further guidance from our ecology advisors on a potential financial contribution to achieve net gain off site but would welcome your position on this matter also as previously discussed.

Regards

- *Year of application assessment unacceptable. Year of opening assessment (2027) must be undertaken instead plus a future year assessment (2032).*
- *Committed developments – Mosley Common (1,050 units) recently approved at planning committee and will impact operation of the adjacent highway network.*
- *Disagree with the proposed trip distribution. Majority of LGV movements turn right onto Chaddock Lane, rather than left. There is then a 50/50 split of HGV movements turning right/left. Given the proximity to SRN, it is anticipated that the majority of HGV movements would turn left onto Chaddock Lane before heading east on the A580.*
- *Strongly suggest trip distribution is based on turning count data, rather than JTW information from 2011.*
- *Numbers on trip distribution diagram incorrect. Certain values do not add up (Salford reference the same issue)*
- *Extant permission includes improvement schemes at A580/A572 and A580/A577 junctions, but this assessment does not even consider impact at these junctions.*
- *Depending on the split between B2/B8 use at the development there is potential for a requirement of up to approximately 550 spaces. The proposed provision is much lower, and we need to understand why that is the case. There are already issues with on-street parking on the adjacent highway network and any additional pressure needs to be avoided at all costs.*

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

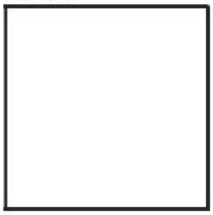
Hi [redacted]

You'll see from my email chasers to [redacted] (today and yesterday) that unfortunately we have not yet received an update from [redacted] following his meeting with [redacted] on Monday, despite what we had agreed at last week's meeting, which is clearly disappointing as we are no clearer as to what the Council's collective highways position is. Please can you chase internally and provide an urgent update?

It is worth noting the attached email trail between the transport consultants, Hydrock, and [redacted] (which [redacted] was cc'd to – I assume it is the same [redacted] that has now raised issues). The attached email trail clearly shows that [redacted] and others were provided with the draft TA and Framework Travel Plan prior to submission, comments which were picked up in the submission versions. It is therefore all the more confusing that despite having had sight of a draft TA that new issues have been raised.

I trust you can provide us with an urgent update so that we are clear where we stand.

Kind regards



[redacted]

Wigan Council

Report to Planning Committee

Application number: A/23/96226/MAJOR

Speaking arrangements:

One speaker against for 4 minutes. One speaker in favour for 4 minutes.

Applicant: Astley Unit Trust.

Development Proposed: Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths '014/145/10', '014/152/10', '014/154/10' and '014/159/10' and associated engineering, infrastructure and landscaping works.

Location: Land at Astley Park Way, Worsley.

Ward: Tyldesley and Mosley Common.

Site description

The application site relates to approximately 12.5 hectares of an existing Primary Employment Area (PEA), Chaddock Lane, and is part of an area known as Astley Business Park. The site is located to the north of the East Lancashire Road (A580). The site extends from the immediate rear of Applewood Farm Public House, northwards where it will lie adjacent with further areas of the Business Park to the west and existing residential areas to the north, north-west and east of the site.

The site is currently undeveloped and is dissected by a number of public footpaths. The site has areas of dense vegetation, especially in parts in the south-west.

A partly constructed internal access road is present leading from the south of the site, off Chaddock Lane, to its centre. This was constructed as part of the wider development approved under planning application reference 'A/15/81365/OUTMAJ' which is discussed in more detail in the following sections of this report.

The surrounding area has a mixture of uses, predominantly industrial and residential. The land to the south of Chaddock Lane and south-west of the site forms part of the PEA and consists of a range of industrial uses. The northern boundary of the site is demarcated by Garrett Lane which extends east to west. On the northern side of Garrett Lane, a large-scale residential development is situated and remains under construction at the present time. Other pockets of residential development are located along the eastern boundary of the site. Residential development also bounds the west and north-west boundaries of the site.

The site forms part of an outline planning permission granted in 2017 for a mixed-use development comprising employment floor space (use classes B1, B2 and B8), up to 165 residential dwellings along with associated infrastructure and landscaping (planning application reference 'A/15/81365/OUTMAJ'). The residential elements of the approved outline scheme received reserved matters approval under planning application references 'A/17/83910/RMMAJ' (62 no. dwellings) and 'A/19/87155/RMMAJ' (103 no. dwellings). These areas are located to the north and east of the application site and are now built out.

The area proposed for employment under this application replicates the development approved in 2017, however no application for reserved matters was applied for and the time for doing so has now lapsed, hence the need for this application to come forward in 'full' form.

The proposal

Planning permission is sought for the development of the site for warehousing units which would have planning use classes of B2 (general industrial) and B8 (storage and distribution). The proposed units will consist of four separate buildings totalling almost 33,000 square metres (sqm). Each unit will have ancillary office and reception space, parking and servicing areas. The wider scheme will also consist of the provision of internal road accessways, associated infrastructure and landscaping works.

The buildings will be laid out across the site, with the two larger buildings located to the north and west of the area and two smaller buildings located centrally and to the east of the site. The associated servicing and parking areas are located alongside each unit. The buildings will have a maximum height of 18.3 metres. As is typical of large-scale warehouses within these planning use classes, the buildings would be available for use 24 hours a day.

The proposed development includes a landscaping scheme which includes landscaped bunds running across the northern and eastern boundaries and also a section along the western boundary. New areas of hedges, trees and low planting area proposed within the centre of the site. Two existing attenuation ponds will be retained along part of the southern boundary of the site which will form part of the landscape and drainage strategy for the site.

The proposed development will result in the need to permanently divert four public footpaths. The proposal includes new 3 metre wide footpaths leading from Chaddock Lane through the site and connecting with bridleway routes that run adjacent to the site.

Vehicular access into the site will be from Astley Park Way, the aforementioned partially constructed access point (approved under the outline scheme reference 'A/15/81365/OUTMAJ' for the wider site). This will be progressed to provide an internal road network which leads directly to each of the proposed warehouse units and the associated car parking and servicing areas.

The following documents support the application and are available to view on the Council's website and at the request of the Local Planning Authority:

- Planning application form, notices and certificates.
- Location plan.

National and local planning policy and guidance context

Local Plan Allocation

- Primary Employment Area: Chaddock Lane.

  (Saved Wigan Replacement Unitary Development Plan Policy EM1A – Primary Employment Areas)

Relevant local and national planning policy and guidance

- National Planning Policy Framework (NPPF), revised 2023.

The NPPF sets out a presumption in favour of sustainable development. Paragraph 7 of the NPPF states that the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs.

Paragraph 9 of the NPPF states that plans and decisions need to take local circumstances into account, so that they reflect the character, needs and opportunities of each area.

The NPPF re-iterates that planning law requires that applications for planning permission must be determined in accordance with the development plan unless material considerations indicate otherwise.

- National Planning Practice Guidance (NPPG), as amended.

- Wigan Local Plan Core Strategy (Core Strategy) Policies

SP1 - Spatial Strategy for Wigan Borough
SP4 - Broad locations for new development
CP7 - Accessibility
CP10 - Design
CP16 - Flooding
CP17 - Environmental protection
CP18 - Developer contributions

- Saved Wigan Replacement Unitary Development Plan (UDP) Policies

A1S - Parking in New Development
EM1A - Primary Employment Areas
EV1B - Pollution

- Places for Everyone (Formerly Greater Manchester Spatial Framework) Policies

Places for Everyone (PfE) is a joint Development Plan Document being produced by nine Greater Manchester districts (Bolton, Bury, Manchester, Oldham, Rochdale, Salford, Tameside, Trafford and Wigan). Once adopted, the PfE Plan will form a key component of each district's development plan alongside individual district Local Plans.

PfE has now been adopted, and in effect from 21 March 2024.

The following PFE policies are considered to be of relevance to the proposal:

- *Strategy*

Policy JP-Strat8: Wigan-Bolton Growth Corridor
Policy JP-Strat14: A Sustainable and Integrated Transport Network

- *Sustainable and Resilient Places*

Policy JP-S1 - Sustainable Development
Policy JP-S2 - Carbon and Energy
Policy JP-S3 - Heat and Energy Networks
Policy JP-S4 - Flood Risk and the Water Environment
Policy JP-S5 - Clean Air
Policy JP-S6 - Resource Efficiency

- *Places for Jobs*

Policy JP-J1 - Supporting Long-Term Economic Growth
Policy JP-J2 – Employment Sites and Premises
Policy JP-J4 – Industry and Warehousing Development

- *Greener Places*

Policy JP-G1 - Landscape Character
Policy JP-G7 - Trees and Woodlands (2 for 1 replacement or other net enhancement)
Policy JP-G8 - A Net Enhancement of Biodiversity and Geodiversity (min. 10%)

- *Places for People*

Policy JP-P1 - Sustainable Places
Policy JP-P2 - Heritage
Policy JP-P5 - Education, Skills and Knowledge
Policy JP-P6 - Health
Policy JP-P7 - Sport and Recreation

- *Connected Places*

Policy JP-C1 - An Integrated Network (accessibility hierarchy)
Policy JP-C2 - Digital Connectivity
Policy JP-C3 - Public Transport
Policy JP-C4 - The Strategic Road Network (added)
Policy JP-C5 - Streets for All
Policy JP-C6 - Walking and Cycling
Policy JP-C7 – Freight and Logistics
Policy JP-C8 - Transport Requirements of New Development

- Development and Air Quality
- Planning for Health (2022)
- Development and Air Quality (2021)
- Landscape Design (2021)
- Travel Plans (2007)
- Access for All (2006)
- Policy Note: Car Parking Standards for New Development

Previous relevant planning decisions

Application reference A/19/87155/RMMAJ - Reserved matters application for A/15/81365/OUTMAJ seeking approval of appearance, landscaping, layout and scale for 103 dwellings and associated infrastructure. Approved September 2019.

Application reference A/17/83910/RMMAJ - Reserved matters for A/15/81365/OUTMAJ for residential development seeking approval of appearance, landscaping, layout and scale for 62 dwellings. Approved September 2017.

Application reference A/15/81365/OUTMAJ - Outline application for a mixed-use development comprising up to 28,000 SQM of employment floor space (use classes B1, B2 and B8), up to 165 dwellings, land for community use, open space, landscaping and association infrastructure (all matters reserved except employment access from Chaddock

Lane; residential access from Garrett Hall Road and Garrett Lane). Approved February 2017.

Application reference A/09/73189 - Provision of new access road and associated landscaping (Reserved Matters to A/08/72144, Outline application for employment park comprising up to 31,500 square metres of Class B1, B2 and B8 uses). Approved February 2010.

Application reference A/08/72144 - To vary condition 2 of planning approval A/06/67659 to accord with revised master plan and site access arrangement to outline application for an employment park comprising up to 31,500 square metres of class B1, B2 and B8 uses (All matters reserved except access). Approved April 2009.

Application reference A/06/67659 - Outline Application for employment park comprising up to 31500 square metres of Class B1, B2 and B8 uses (All matters reserved except access). Approved September 2007.

Consultation responses

- *Environment Agency:*

No objection subject to the following comments:

The development site appears to have been the subject of past industrial activity which poses a medium/high risk of pollution to controlled waters. However, we are unable to provide site-specific advice relating to land contamination and advise that the Council's Environmental Health team are consulted for advice on generic aspects of land contamination management. Where planning controls are considered necessary, we recommend that the environmental protection of controlled waters is considered alongside any human health protection requirements. This approach is supported by paragraph 180 of the National Planning Policy Framework.

- *Lead Local Flood Authority:*

No objection subject to confirmation on the following:

Please provide the hydraulic calculations to prove that no flooding will occur during the 1:1, 1:30 and 1:100 + CC events, this can be achieved through a suitably worded condition.

Plans have been provided which shown a culverted watercourse at the most southern point of the site boundary.

If a new connection into the culverted watercourse is required, then an application for Land Drainage Consent will need to be submitted to the LLFA although it is understood that the development will connect to an existing manhole which already has an existing connection to the culverted watercourse and no new connection is required.

- *Environmental Protection Officer:*

No objections, subject to the following conditions:

The applicant has submitted a noise report in support of this application. The installation of the acoustic fence must be carried out before the use of the development commences.

A Construction Environmental Management Plan (CEMP) is required to be submitted prior to any works taking place and this can be obtained through a condition.

Conditions are also required regarding electric charging points and land contamination.

- *Public Rights of Way Officer:*

No objection subject to a condition requiring details of surfacing, precise dimensions and a timetable for construction.

- *Highways Policy Officer:*

(18 April 2024) – No objection to the proposal on the basis the traffic generated by the development has minimal impact on the operation of the A580/A577 junction.

(16 January 2024) - No objection in principle subject to the following comments and conditions:

Trip generation and forecasting**:** The application relates to the proposed development for a B2 / B8 land use development comprising a Gross Floor Area [GFA] of circa 32,825sqm across a number of units, situated at Astley Park Way off Chaddock Lane.

The trip rates have been previously agreed and are acceptable.

It should be noted that growth factors and the following committed developments were used in this TA. The committed developments are:

- A/17/84108/OUTMAJ - Land North Of Garrett Lane, East Of Garrett Hall, West Of Mosley Common Road, And South Of The Guided Busway Tyldesley.
- A/17/83702/OUTMES - Parr Bridge Works, Mosley Common Road, Tyldesley, Manchester M29 8PR.
- A/17/84560/OUTMAJ - Land East Of Leigh Road South/West Of Bee Fold Lane.
- A/20/88849/MAJOR - North Leigh Park Nel Pan Lane Leigh.

Local junctions / network impact**:** The following modelling concerns have been identified:

- In terms of trip distribution, it is not clear how each MSOA area has been allocated to a particular route.
- The study area needs to be extended to all junctions on the network experiencing an increase of 30vph or more. All junctions experiencing an increase of 30vph should be modelled.

- The lane widths used in the modelling for both junctions are too high. The modelling should be corrected and resubmitted.

Public transport and sustainable travel**:** The proposed development site is in a reasonably accessible location and is well located to make use of the existing public transport links and pedestrian / cycle routes.

Road safety**:** The causes of road traffic accidents are random and multifunctional, with each accident having several different reasons and trying to spot one overall contributing factor may not be possible. It is for this reason that Greater Manchester Police (GMP) will normally attend and record accidents that occur on the borough's highway network, where the accident results in an injury to persons. As a part of this process, they will record the details of the accident; and undertake an accident investigation to try and determine the contributory factors that may have caused the accident. The Council will analyse this data over a 5 year period to see if any trends can be identified. It should be noted that 'damage' only incidents will not appear on the accident database.

Details of damage only accidents are held by insurance companies and because of data protection, the Council cannot access this information. Without a detailed accident investigation being undertaken, any information given to the Council cannot be verified and must be regarded as hearsay.

The Police database was checked for the A572 Chaddock Lane, which included its junctions with Coach Road and the A580 East Lancashire Road. During the last five-year period for which data was available, fourteen accidents were recorded. All accidents were attributed to road user behaviour and two accidents involved vulnerable road users.

The following conclusions can be made regarding the accident data:

- An average of 2.8 accident a year have been made per year in the study area.
- No accidents have occurred at the site access.
- No accident cluster have been identified.
- No accident trends have been identified.

Adoption record**:** It should be noted that the existing access is still subject to the certification process for adoption.

Visibility**:** The proposal uses an existing access and the visibility splays comply with Manual for Streets.

Servicing**:** Based on Drawing No: 21714-HYD-XX-XX-DR-TP-1003, a large articulated vehicle can enter and leave the site in forward gear.

Layout: The site highways layout is acceptable.

Parking**:** The basic car park layouts will allow for the free flow of traffic and a vehicle can enter and leave a bay in one manoeuvre. However, there are no pedestrian facilities and there should be a footpath at the rear of the parking bays that connects into building entrances. Cycle parking facilities will require a roof.

The applicant as offered no evidence that the proposed level of parking provision is suitable for the development site. The site should be self-sufficient in parking terms and not lead to inappropriate parking on the proposed highway network. This would raise concerns for highway safety and congestion.

Proposed mitigation measures**:** It is recommended that a contribution towards the upgrade and revalidation of MOVA at the junction of A580/Chaddock Lane is requested. TfGM anticipate that this would cost in the region of £15k. This would help to futureproof the development by mitigating any increased delay because of the increased traffic flows and changes in traffic patterns. Also, this would ensure that the network operates as efficiently as possible to ensure that congestion is minimised.

Conclusion on highways matters**:** No objections in principle, and the modelling concerns are addressed.

- *Transport for Greater Manchester:*

The accident data should be updated to 2022. In terms of trip distribution, it is not clear how each MSOA area has been allocated to a particular route. The study area needs to be extended to all junctions on the network experiencing an increase of 30vph or more. All junctions experiencing an increase of 30vph should be modelled. The lane widths used in the modelling for both junctions are too high. The modelling should be corrected and resubmitted.

- *Salford City Council:*

Neither objects nor supports for the following reasons:

A car park accumulation exercise should be undertaken to evidence that proposed car park provision. It should be considered why the previous planning permission for this site was required to mitigate its impact at the A5801 A577 junction and whether or not it is considered appropriate that this application does not assess its impact on that junction. The previous permission for this site secured financial contributions to improve the A5801 A572 junction yet the current TA concludes at paragraph 8.4.3 that this development of comparable scale will not have a material impact.

The submitted TA states at paragraph 8.2.1 that the Astley Park Access A572 Chaddock Land and A572 Chaddock Lane A580 Lancashire Road junctions had been assessed “given that the traffic impact was greater than +30 two way trips” yet figure 11 of the appendices shows 46 PCU movement to and from the A5801 A577 junction in the weekday AM peak and 54 in the PM peak. Whilst this exceeds the agreed threshold no consideration of the impact at this neighbouring junction has been considered.

There is also some confusion over the numbers shown on the flow diagrams where the spot checks focus on the right turn in the PM peak from the A1580 to the A572.

TfGM should be consulted on this application and a CEMP should be required which should include the routing of construction vehicles.

- *Greater Manchester Ecology Unit:*

The applicant has submitted an updated bat report and there is no reason/evidence to doubt the findings. No further information is required with respect to bats. It is recommended that section 4.2 of the Bat Report forms the basis of a condition.

The applicant has provided evidence from Natural England to confirm they are satisfied that the development is eligible for district licensing. Although this process is now in the hands of Natural England, a condition is recommended in the event that the changes to the mitigation approach are required.

Section 180 of the NPPF requires planning decisions to contribute to and enhance the natural and local environment. In this regard the DEFRA metric has been provided. The baseline value of the site appears fair (62.84 biodiversity units). The post development value has been calculated at 51.89 BU. As this application has been submitted prior to mandatory requirements on BNG, the shortfall can be accepted but must be off-set by a financial contribution for biodiversity enhancements off-site.

In addition to the above a habitat management and monitoring plan for the on-site provision and this can be achieved by condition.

No evidence of badger was recorded on the site, but habitats recorded as suitable. The consultant has therefore recommended updated surveys prior to earthworks and vegetation clearance. Whilst the risks would appear low, I accept that as this is a protected species, such an update is reasonable. I therefore recommend a condition requiring a survey of the site to be carried out prior to the commencement of earthworks.

It is accepted that other protected species such as water vole and otter can be reasonably discounted owing to a lack of suitable habitat on or near the site. No further information or measures are required.

Bird surveys determined that breeding birds were present but of only local value. The development will result in the loss of much of the existing nesting habitat. All British birds nests and eggs (with certain limited exceptions) are protected by Section 1 of the Wildlife & Countryside Act 1981, as amended. I recommend a condition to prevent works to trees, hedgerows and shrubs during the nesting season unless a detailed survey by a suitably experienced ecologist is carried out in the first instance.

The consultant has noted that the hedges and scrub on site provide potential cover for species such as hedgehog, a UK Biodiversity Priority Species as well as other mammals and amphibians. The levelling of the site could therefore lead to high an unnecessary mortality of mammals and amphibians if not carried out sympathetically.

Reasonable avoidance measures (RAMs) have been recommended as well as a Construction and Environmental Management Plan that includes ecology within its scope. Given the scale of the hedge removal, that RAMs are appropriate along the lines suggested within section 5.7.4 of the ecological report. A condition will be required to obtain the submission of a scheme for RAMs for mammals and amphibians.

Giant Hogweed is listed under schedule 9 part 2 of the Wildlife & Countryside Act 1981 (as amended), was recorded on the site. It is an offence to cause this species to spread in the

wild. This species also represents a public health risk. A condition is required detailing a method statement for its eradication.

- *United Utilities:*

Following review of the submitted Drainage Strategy, we can confirm that whilst the proposals are acceptable in principle, there is insufficient information on the detail of the drainage design. We request all foul and surface water manhole cover levels and finished floor levels be detailed on the plan in meters AOD and a hydraulic model of the 30 and 100yr+ climate change is submitted to assess surcharge/flooding on site. In addition, should planning permission be granted, we request a condition requiring the submission of a sustainable surface water drainage scheme prior to any development commencing.

- *Coal Authority:*

No objection, subject to a condition requiring further investigative works.

- *Urban/Landscape Design Officer:*

No objection subject to the submission of an amended landscaping scheme to ensure that a good mix of species, providing all year-round cover, is provided. The timing of the implementation of the scheme is critical to ensure the scheme achieves its goal of mitigating some of the harm of the scale of the buildings and this too can be achieved through a condition. The management and maintenance of the scheme can be controlled by way of BNG maintenance condition.

- *Cadent Gas:*

No objections. Information provided which should be made available to the applicant (a holding objection was originally submitted on 9 November 2023, but this was withdrawn as per their comments dated 16 November 2023).

Representations

The application was publicised in accordance with statutory requirements and the Wigan Council Code of Practice for the Publicity for Planning Applications.

Following this exercise, approximately 70 representations were received.

The representations raised the following summarised points in objection to the application:

- Significant harm to the character and appearance of the surrounding area.
- Impact on highway congestion in the local area and the local highway network cannot cope with existing developments.

- The investigation undertaken to determine the impact on traffic peak times is not reflective of the real situation.
- Noise and light pollution
- Impact on air quality
- Loss of green space and this impact on limited existing local provision, along with a loss of amenity area for local residents.
- Empty industrial units and brownfield sites should be used in the first instance.
- Impact on wildlife species, including protected species, who currently use the area.
- Devaluation of local houses.
- Increased drainage issues.
- No infrastructure in place to support more development in the area.
- A walkway circuit should be included.
- The proposed landscaping will not minimise the impact on local residents.
- No demand for more units in the area.
- 24-hour use will have a devasting effect on local residents
- Local housing estates could be used a cut through for associated vehicles and for parking for staff.
- Impact on local schools and the health and wellbeing of children who use them.
- Increase in potential hazardous materials in the local area.
- The well-being of local residents should be prioritised.
- Detrimental impact on climate change.
- Homes nearby would not have been purchased if it was known that this green area was going to be lost.
- This development does not support the NPPF's guidance on the need to transition to low carbon.
- With the recent new build homes, this area has become a predominantly residential area.
- Will the retained Public Rights of Ways be safe to use.
- The proposal is significantly different, in terms of scale, to the development approved in 2017 and there are now more homes in the local area.
- Residents are already impacted by noise and odours from local businesses.
- The associated benefits, including job creation, are a myth.
- Loss of daylight/sunlight to nearby resident.
- Impact on historic coal mines.
- Increase in crime rates in the local area.
- The proposal will undermine the sense of community in the local area.
- The provision of electrical vehicle charging point has been done without evidence to show if the grid can cope.
- Insufficient parking for staff.
- The inclusion of cycle parking does not off-set the resulting pollutants.
- Insufficient services to cope, such as doctors, dentists and schools.
- Loss of Green Belt land.
- The plans are incorrect, there is more housing in the area, especially to the east of the site.
- The path to Parr Bridge retail area needs to be upgraded and this area should be used to provide some high-street style service for local residents.
- The Travel Plan contains some discrepancies.
- The proposed landscaping will block light to residential properties.
- A thorough assessment of the socio-economic impacts should be conducted.

- A comprehensive assessment of flooding events, impact on gas main and traffic and pollution should be undertaken.
- The noise assessment considers volume of noise and not the nature of the noise.
- Concerns raised by Coal Authority, United Utilities and Cadent Gas
- Impact on land stability
- No site notice was displayed by the applicant.
- Unit 1 does not face internally, and the waste/recycling facility will be located immediately next to residential dwellings.
- The quiet nature of the area will be lost.
- Potential noise impacts exceed WHO guidelines.
- The development will outdo all the good work recently undertaken to rejuvenate the Mosley Common area.
- Heavy Goods Vehicles (HGVs) already cause harm to local roads and illegally turn right on Higher Green Lane
- The buildings are too tall.
- Roof cladding does not fit in with the character of the local area.
- The application was clearly submitted after the new housing estates were built and occupied.

Further to the above, James Grundy MP has objected to the development for the following reason:

- The warehousing units should not be built in such close proximity to the residential properties and schools.
- There will be an increase in pollution from ancillary vehicles and an increase in noise and lights 24 hours a day.
- Detrimental health effects on local residents and on local school children could arise.
- This area lacks the infrastructure for such development and it would cause congestion on the roads. The access road to this area is a single track and already very congested at certain times of the day.
- The local wildlife should be considered as this will take away more green space.
- The submitted site plan is not accurate, I have been informed that it does not reflect the residential aspects of the developments.

Representations are available to view on the Council's website.

Assessment

Decision-making and the 'Development Plan'

Section 38(6) of the Planning and Compulsory Purchase Act 2004 and Section 70(2) of the Town & Country Planning Act 1990 require planning applications to be determined in accordance with the statutory development plan, unless material considerations indicate otherwise. The 'Development Plan' for the borough of Wigan, in this instance, currently comprises:

- Saved Policies of the Wigan Replacement Unitary Development Plan (UDP, adopted 2006);

- Wigan Local Plan Core Strategy (Core Strategy, adopted 2013);
- Places for Everyone (adopted 21st Mach 2024);
- Greater Manchester Joint Minerals Plan (adopted 2013); and
- Greater Manchester Joint Waste Development Plan Document (adopted 2012).

Key material considerations in this respect include the national planning policies in the NPPF or 'The Framework' (revised 2021), National Planning Practice Guidance (as amended) and the Council's Supplementary planning guidance / documents, together with consultee responses and third-party representations.

Further to the above, the proposed development involves the erection of 4 no. units with a mixture of Planning Use Class B2 (General Industry) and Planning Use Class B8 (storage and distribution) uses and associated infrastructure at land off Astley Park Way. The following matters are therefore considered the key assessment criteria to be considered in the overall assessment of this application and are discussed within the report:

- **Principle of Development**

    - Sustainable development
    - The Primary Employment Area
    - Benefits as a result of the development
    - Developer contributions
    - Principle of development conclusion

- **Design and layout**

    - Planning policy and guidance
    - Design, layout, scale and appearance

- **Amenity relationships**

    - Planning policy and guidance
    - Design and layout in relation to amenity
    - Noise considerations
    - Air quality
    - Conclusion of amenity relationships

- **Transport, accessibility and parking**

    - Transport policy context
    - Impact on the local highway network
    - Site context/active travel
    - Vehicle and pedestrian access
    - Vehicle and cycle parking
    - Other matters
    - Conclusion on transport, accessibility and parking

- **Trees, landscaping, ecology and biodiversity**

- **Technical matters**

- Flooding and drainage arrangements
- Ground conditions

- **Observations on the representations**

Principle of development

- *Sustainable development*

The NPPF (or 'the Framework') sets out a presumption in favour of sustainable development. Paragraph 7 of the NPPF states that the objective of sustainable development is to meet the needs of the present without compromising the ability of future generations to meet their own needs. Paragraph 9 states that plans and decisions need to take local circumstances into account, so that they reflect the character, needs and opportunities of each area.

The Framework re-iterates that planning law requires that applications for planning permission must be determined in accordance with the development plan unless material considerations indicate otherwise.

Paragraph 85 of the NPPF sets out that planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development.

The NPPF states that the purpose of the planning system is to contribute to the achievement of sustainable development. So that sustainable development is pursued in a positive way, at the heart of the NPPF is a presumption in favour of sustainable development, which, for decision-taking, means approving development proposals that accord with an up-to-date development plan without delay.

PfE Policy JP-S1 echoes the NPPF in stating that when considering development proposals, a positive approach that reflects the presumption in favour of sustainable development will be taken. Planning applications that accord with the policies in the Core Strategy will be approved without delay unless material considerations indicate otherwise. In order to achieve transformation, regeneration and create attractive places for people to live and businesses to locate and thrive,

Local planning policies expand on national planning policy and the Core Strategy, along with the saved policies in the UDP, focuses on making the Borough a more attractive place to live and to attract new employment and investment through a sustainable balance between economic progress, social progress and environmental protection and enhancement. Core Strategy Policy SP1 sets out the spatial strategy for the borough and states that development will be direct primarily towards the east-west core of the borough.

- *The Primary Employment Area*

The site is located within the east-west core of the Borough and is designated as a Primary Employment Area (PEA), Chaddock Lane, within saved UDP Policy EM1A. This policy states that: development for, or changes of use to, uses within Classes B1, B2 and B8 or other employment uses will be permitted provided that there will be no unacceptable environmental, amenity, highway, road safety or other adverse impact. Whilst the impact of the proposed development on the subjects mentioned above will be discussed later in this report, in principle of the erection of 4 no. units for B2/B8 planning use class purposes is acceptable as it accords with saved UDP Policy EM1A.

Policy JP-J2 of the PfE states that existing employment areas are important to maintaining a strong and diverse supply of sites and premises in our boroughs and will be protected from redevelopment to other uses, nurtured to ensure they remain competitive, and their accessibility improved where necessary. This will include local employment areas as well as key growth locations.

Policy JP-J4 of the PfE advises that the need to provide the level of industrial and warehousing land within the Plan reflects the need for Greater Manchester to compete internationally for investment and provide sufficient choice and flexibility to respond to the varied needs of different businesses. This will help Greater Manchester to maximise its ability to attract and retain businesses and hence support its long-term economic growth prospects and the availability of local jobs.

- *Benefits as a result of the development*

The development represents a significant inward investment for the Borough and will create employment, both in operational and construction phases, together with supporting supply chains, local businesses and income for in the form of business rates for the Council. Conditions are also proposed relating to the provision of employment and training opportunities for local people. In support of these statements, the applicant has supplied the following details:

Construction Phase:

- Approximately £30 million in construction investment;
- Creating approximately 140 gross on-site direct temporary full time equivalent jobs (FTE);
- Creating approximately 150 net direct, indirect and induced employment FTE jobs across the wider area; and
- Generating approximately £8.5million for the wider area of which approximately £3.6million could help support local economic growth within Wigan.

Operational Phase:

- Generating net additional impacts of approximately £21.6 million of net additional GVA annually for Greater Manchester of which approximately £12.5 million GVA could help support local economic growth within Wigan.
- The proposed development will support approximately 500 on-site jobs. As these jobs will be flexible depending on the number of hours worked, the new employment opportunities will be a mix of part-time and full-time.

- The creation of approximately 460 net additional FTE jobs within existing business / supply chains across Greater Manchester.
- Generating a tax yield to the Council from fully developed/occupied sites of approximately £280,000 per annum; and
- Meeting the needs of the labour market and the demand for jobs in Wigan and the wider Greater Manchester region.

- *Developer contributions*

In relation to development contributions, Core Strategy Policy CP18 seeks to ensure that there is capacity for new development and help make the borough an attractive place for people to live by ensuring that development funds, or contributes to the funding of, necessary off-site works or programmes in accordance with the provisions of legislation, national planning policy and other local planning policies, providing that it is viable.

A Section 106 is in the process of being prepared and has been agreed between the applicant and Local Planning Authority (LPA) on the basis of the following secured contributions:

- Highway contribution of £15,000; and
- The provision of £199,332 for biodiversity enhancement at Bedford Colliery.

Details as to why these contributions are being secured are discussed in the following sections of this report, and, on this basis, demonstrate the proposals compliance with Core Strategy Policy CP18 and the relevant sections of the NPPF.

- *Principle of development conclusion*

The proposed erection of 4 no. industrial units is acceptable in principle; the units are considered to complement the wider PEA where such units are supported in local and national planning policy.

Whilst the site has naturalised and may currently be used for informal amenity purposes by local residents, it remains an allocated site for employment purposes and has a long planning history, dating back to 2006, for that purpose. In accordance with national and local policies, it is necessary for such land to be prioritised for the development of employment generating purposes in such a manner that it ties in with the PfE requirement for the delivery of national and international investments.

Given the above, the principle of development is considered to be acceptable and compliant with saved Policy EM1A of the UDP, Core Strategy Policy CP18 and Policies JP-J2 and JP-J4 of the PfE, along with the relevant policy objectives contained within the NPPF.

Design and layout

- *Planning policy and guidance*

Core Strategy Policy CP10 seeks to ensure that new development is well designed and has regard to the scale, design, layout and materials of the surrounding and existing buildings

with no adverse impacts on the amenity of nearby land uses. The revised NPPF also states that the government attaches great importance to the design of the built environment. Good design is a key aspect of sustainable development, is indivisible from good planning and should contribute positively to making places better for people.

- *Design, layout, scale and appearance*

The proposal's design results in the development being spread across the site, with the larger two units located in the north and west of the site and smaller two located in the south and east. The built development would be set back from all boundaries with a landscape buffer extending along the north, east and west boundaries. Access would be taken from an existing, unfinished access point (approved under outline permission 'A/15/81365/OUTMAJ' for the site) and direct access to each unit would lead directly from this and in particular to the parking and servicing areas for each unit.

The site is generally level, and the proposed development would respect the existing topography of the site. Some retaining features are required within the central areas of the site to reflect area of a lower level, but these features would be contained within the site and not visible from the surrounding area.

The unit proposed as 'Unit 1' measures 15.8 metres x 8.4 metres with a total height of 18.3 metres and located close to the northern boundary of the site. The associated loading bays (12 no. in total) and serving area would be located along the southern elevation of the building (facing internally within the site) along with the associated parking for HGVs. Car parking would be located to the west and a total of 113 no. bays are proposed which include 2 no. disabled bays, 11 no, electric vehicle parking spaces (EVPS) and 6 car share bays. The building would be finished in a mixture of horizontal and vertical cladding in different shades of grey.

Unit 2 as proposed is located to the west of the site and would measure 13.6 metres x 9 metres with a maximum height of 18.3 metres. The associated loading bays (16 no. in total) and serving areas would be located to the south of the building, while the vehicular parking, a total of 141 no. spaces, would wrap around the north and east of the building. The building would be finished as described above also.

Units 3 and 4 as proposed are located to either side of the main accessway. Unit 3 measures 8 metres x 3.6 metres with a maximum height of 13.7m and would have 4 loading bays along its eastern elevation together with a general servicing area. Associated parking would be located to the south of the building. Unit 4 is the smallest of the proposed units, measuring 7.6 metres x 3.7 metres with a maximum height of 13.6 metres. The loading bays and associated servicing area would be located to the west of the building, with associated car parking located to the east. Again, both of these units would be finished in a similar manner to that described above.

The proposed development includes a comprehensive landscaping scheme which includes bunding around the north, west and east site boundaries. The landscaping scheme has been included for two purposes; firstly, to mitigate the impact of the development on the character of the surrounding area and secondly as a mitigation for neighbouring amenity purposes (which will be discussed later in this report). There are other areas of landscaping throughout the site and most notably along the proposed diverted public rights of way which

will remain and ensure connectivity. It is to be noted that the site does not fall into any particular landscape category as outlined in Policy JP-G1 of the PfE.

Expanding on the above, the proposals provide a scheme which incorporates a generous amount of landscaping to assimilate the development into its surroundings. Two of the buildings are high and the proposed landscape buffer around the site perimeter will help to mitigate the impact of the scale of these building when viewed from the north, west or east of the site where residential properties are located. In this respect the applicant has submitted justification for the scale of Units 1 and 2 in particular, which centres on the need to provide internal eaves height of at least 15 metres for units between 100,000 and 200,000 square feet to attract suitable investors. A comparable exercise with other existing warehouse units in the wider area has been provided to show that the scale of units 1 and 2 are not excessive for the proposed purpose, and this is accepted by Officers.

To the south and south-west of the site, the area is industrial in nature and, in this context the proposed development will be characteristic of the wider PEA.

The proposed layout offers a legible scheme where there are clear routes around the site and to each unit. The retention of public rights of way through the site and wider connectivity is important, and it is imperative that a scheme, which facilitates the safe movement of those who utilise these paths, is obtained through a suitably worded condition, which has been secured by Officers. The principle of the scheme submitted at this stage is acceptable as it retains connectivity to existing routes located adjacent to the site.

In general terms, the proposed design, appearance and finish of the proposed units is acceptable; the proposed materials and their finishes are characteristic of typical warehousing schemes. The proposed materials for the hard surfaces have been provided and these offer a good mix, distinguishing the different areas such as pedestrian areas, parking areas and road surfaces.

Due to the aforementioned landscaped buffer zone around a large part of the site area, the proposed fencing for the site sits within the site rather than around its boundaries. The exception between the south-west boundary which will lie adjacent to an existing industrial site. Here, 2.4 metre high paladin fencing is proposed which is considered to be acceptable. Internal fenced areas include areas of mesh security fencing and close boarded acoustic fencing which are considered to be acceptable and will not be visible in the surrounding areas due to the landscaped bunds.

Areas of waste and recycling have been indicated on the plans and Officers are satisfied that there is sufficient space to ensure that appropriate areas for such purposes can be provided. Given the scale of the site and provision of dedicated servicing areas for each unit, no further details on the bin storage areas are required and will be secured through the permission if forthcoming.

A lighting assessment has been submitted in support of the proposed development. The scheme acknowledges the need to provide a scheme given the open use of the site, but also the need to prevent light pollution through a combination of optimal mounting heights and the use of low energy efficient LED lighting luminaires that limit glare. The scheme focuses on the buildings themselves and areas around the buildings and as such is removed

from the fringes of the site to avoid, as far as is practically possible, any overspill into neighbouring residential areas.

It is acknowledged that the proposed development will significantly alter the character and appearance of the existing site. The scale of the proposed development is significant, and it will be visible from surrounding viewpoints. However, this is a designated PEA site and there are many examples of industrial units to both the south and west of the site, which vary in size and scale. Furthermore, the proposed units will sit back from the main highway, Chaddock Lane, and will not therefore be overly visible from this perspective. From other areas around the site, it is acknowledged the character of the site will change significant for local residents, especially those close to the site boundaries to the north, west and east. However, a scheme for landscaping bunding has been provided to seek to mitigate this impact along with setting the units and their associated areas back from the site boundaries where these meet with residential areas. The development will be visible from certain areas, including the landscape bunds, however Officers are satisfied that a suitable scheme of mitigation has been provided to minimise these impacts as much as possible and to acceptable levels.

Given the above, on balance the proposals are deemed by Officers to be compliant with Core Strategy Policy CP10 and the relevant related objectives within the NPPF.

Amenity considerations

- *Planning policy and guidance*

To assess the amenity relationships of the development, the proposal is to be assessed against Core Strategy Policy CP17 and the amenity related objectives of the NPPF. An aim of Core Strategy Policy CP17 is to ensure that new development is planned and designed so that it does not have an unacceptable adverse impact on amenity and quality of life. This is also reflected in Saved Policy EM1A of the UDP which states that development on PEAs will only be permitted provided that there will be unacceptable amenity impact.

- *Design and layout in relation to amenity*

Having regard to proposals of this nature, the most likely issue that will cause unacceptable adverse impacts on amenity or quality of life is noise, including associated traffic movements, and odour.

Further potential issues can be related to overlooking, outlook, overbearing and overshadowing, especially given the scale of the units, and in particular in relation to these proposals, Units 1 and 2.

With respect to Unit 1, this is located to the south of a recent residential development, known as Land East of Garrett Hall, and to the east and west of further housing developments which were granted outline permission in 2017, along with the industrial redevelopment for this application site. The proposed unit will be set in approximately 5 metres from the northern boundary and 4 metres from the eastern boundary. A landscaped bund will be located in between the unit and these neighbouring boundaries. It is proposed to plant this bund with a range of tree to provide some screening from the residential dwellings.

Associated activity with the unit will be focused to the south of the building where the loading bays and servicing areas are proposed; the elevation facing the neighbouring residential properties is blank.

Proposed Unit 2 is located to the south of Garrett Hall Primary School and the residential properties previously mentioned and the east of residential properties on Tanhouse Avenue, Whittington Drive and Riding Close. The side elevation of Unit 2, which will be blank, will face towards these neighbouring properties and a gap of approximately 5 meters will be remain between the site boundary and the edge of the building. As before, a landscaped bund will be provided in between the site boundary and the proposed building. Associated activity will be focussed on the southern side of the building which faces towards adjacent industrial buildings.

Unit 3 is located centrally within the site and a significant distance from local residential properties. It will be located to the rear of the neighbouring Applewood Farm public house, but given the use of this building, Officers are satisfied that no significant issue will arise as a result of this relationship.

Unit 4 will be located to the west of a relatively new housing development, the outline permission for which was granted along with the industrial redevelopment of the application site in 2017 (Reference 'A/15/81365/OUTMAJ'). As above, a landscaped bund will be provided in between the site boundary and the eastern, blank elevation of Unit 4. Associated activity will be focussed on the western side of the building.

As can be seen from the breakdown of the units' position and design above, the units face away from local residential properties, a specific design consideration to assist amenity relationships, and further internal fencing has been provided around vehicle parking areas in order to provide a further 'barrier' between elements of the development and the nearby residential properties.

The proposed landscaping scheme is considered to be critical to ensuring this proposed mitigation measure is effective. It is important that the planting scheme to go within the bunds includes both deciduous and evergreen species to ensure there is some element of screening all year around. Phasing of the landscaping scheme implementation will also be critical and as much as possible should be planted up front to begin screening the units as soon as is feasible. Whilst the submitted landscaping scheme is good, further details on the particular species to be used and a landscape management plan will be requested by condition.

Officers accept that the proposed development will impact the existing level of amenity experienced by local residents, especially those will live immediately adjacent to this PEA site. It must be accepted that views of these units cannot be completely mitigated for local residents, they will be seen despite the proposed landscaping scheme. However, the proposed scheme will help break up these views and the visual impact will be further minimised by the use of grey graded cladding. Therefore, whilst the proposed units will be visible to local residents, due to the siting, design and landscaping scheme, Officers are satisfied that the level of harm to amenity is, on balance, acceptable.

Due to the set back from site boundaries and the use of landscaping as an intervening tool of mitigation, Officers are satisfied that no significant overshadowing or overbearing impact

would occur on the neighbouring properties. It is noted that some residents have raised concerns over the impact of the landscaping itself on their amenities, however it must be noted that planning consent is not required to plant trees and such features could be introduced onto this site without any prior consent being required.

It is noted that one of the main concerns raised by local residents is the loss of the existing green space. As outlined in an earlier section of this report, this land is designated as PEA and not as open space, and as such, it cannot be protected long term for the purposes of informal amenity. Whilst it is regrettable that this area will be lost for that purpose, public footpaths will be retained through the site with connectivity to the adjacent bridleways which will ensure that local residents can still avail of the site for amenity purposes.

- *Noise considerations*

The application is supported by a noise assessment which has modelled the proposed 24-hour use of the units to establish the likely impacts of neighbouring residents. The report also establishes the existing noise climate in the surrounding area and whether the proposed operations at the site, on a worst-case scenario, would give rise to any unacceptable impacts. This assessment has been reviewed by the Council's Environmental Protection Officer and no objections have been raised.

Associated noise from the movement of HGVs and staff parking during both day and night-time would not significantly harm local residents due to a number of factors, namely the location of the servicing areas which face internally within the site and away from residential boundaries, the use of acoustic fencing throughout the development and the landscape bund around the periphery of the site. The submitted acoustic report evidences that noise levels derived from plant is predicted to be equal to existing daytime and night-time background noise levels.

In terms of traffic movements and general activity within the site, it is accepted that the proposal will increase the number of vehicles visiting the site but given that the access is off an existing roundabout on Chaddock Lane, in a predominantly industrial area, this is unlikely to cause any direct impact on local residents. It is the activity within the site that could give rise to impact but as outlined above, there are migration measures contained within the proposed scheme to off-set those impacts to an acceptable extent.

The applicant has also submitted a Construction Environmental Management Plan (CEMP) which will control the noise and disturbance during the construction phase. The submitted document presents a suitable framework for establishing acceptable principles during this phase of the development, however some amendments are required, and these will be sought through a condition.

- *Air quality*

The application is accompanied by an Air Quality Assessment (AQA). Chapter 15 of the NPPF, Policy CP17 of the Core Strategy and Policy JP-S5 of the PfE require the maintenance, enhancement and protection of our environment for the benefit of people of wildlife and to make the Borough a better place for people to live and businesses to locate and thrive in by (inter alia) managing air quality, particularly in our Air Quality Management Areas, including by minimising the air pollution likely to arise from new development.

In accordance the Council's Development and Air Quality SPD electric vehicles charging points are required (5% of total number of spaces relating to the proposed B2/B8 planning use class units). The proposed number of electric vehicle charging points (EVCP) is considered in principle to be acceptable to Officers. Specific details of these points, including location within the development, can be obtained through a suitably worded condition.

The conclusions of this report are that the associated construction activities and vehicular movements are not predicted to have significant impacts on air quality due to dust and exhaust emissions. In order to mitigate the impact that the development will have, the proposal includes extensive tree planting and as outlined above and will be conditioned to provide appropriate numbers of EVCPs.

Furthermore, and as referenced, a CEMP has been provided which provides a suitable framework within which the construction phase will take place, minimising the impact on the local environment where possible. Whilst this document does not capture all required information, Officers are satisfied that it provides an account of how phases of the development can be controlled to ensure the impact on the local environment is managed. An updated CEMP will be required prior to any development taking place, through a condition.

For the reasons outlined above, Officers are satisfied that the proposal is compliant with Policy CP17 of the Core Strategy, and the related objectives within the NPPF and PfE.

- *Conclusion of amenity considerations*

The proposed development, within this PEA, seeks to co-exist with the surrounding land uses which is a mixture of both residential and industrial. Officers are fully aware of the full extent of housing that surrounds parts of the site and that some of these houses are relatively new additions to the area. These factors have been fully considered in this assessment. The transition between large scale industrial units and residential dwellings is difficult and Officers understand the concerns raised by local residents in this regard. However, weight must be given to the allocation of the site and the need, reiterated in the recently adopted PfE Plan, to develop allocated employment sites to encourage inward investment and increase employment opportunities within the locality.

This is a finely balanced issue but given the level of mitigation provided and as outlined earlier, Officers are satisfied that, subject to the conditions mentioned, the proposed development will not have an impact on the amenities of local residents to an unacceptable degree, and therefore achieves compliance with saved UDP Policy EM1A and Policy CP17 of the Core Strategy, as well as the relevant objectives of the NPPF and PfE Plan.

Transport, accessibility and parking

- *Transport policy context*

The NPPF states at paragraph 108 that transport issues should be considered from the earliest stages of development proposals so that:

- The potential impacts of development on transport networks can be addressed;
- Opportunities from existing or proposed transport infrastructure are realised;
- Opportunities to promote walking, cycling and public transport use are identified and pursued; the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account – including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains; and
- Patterns of movement, parking and other transport considerations are integral to the design of schemes and contribute to making high quality places.

In addition, the planning system should actively manage patterns of growth in support of these objectives. Paragraph 109 of the NPPF states that 'significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions and improve air quality and public health.'

In assessing specific applications for development, revised NPPF paragraph 114 states that it should be ensured that appropriate opportunities to promote sustainable transport modes can be taken up, that a safe and suitable access to the site can be achieved for all users and any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be effectively mitigated to an acceptable degree (if necessary).

All developments that will generate significant amounts of movement should be required to provide a travel plan, and the application should be supported by a transport statement or transport assessment so that the likely impacts of the proposal can be assessed (NPPF, paragraph 117). Importantly, the NPPF also confirms (at paragraph 115) that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.

At a local planning policy level, Core Strategy Policy CP7 'Accessibility' aims to improve accessibility to key destinations for people and goods a connect people to opportunities both within and outside the borough by a number of factors, including by:

- Maximising the capacity, efficiency and safety of the road network, reducing, as far as is practicable, the adverse impact of transport on our communities, town centres and the wider environment.
- Developing and enhancing on and off-road networks for walking and cycling, to, in part, connect local residents to employment facilities;
- Ensuring the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars and vans / lorries, including as part of new development; and
- Promoting the use of travel plans and requiring them to be produced and implemented for appropriate development; and supporting the appropriate provision of infrastructure for the charging of electric vehicles.

PfE Policy JP-C7 seeks to ensure that new development makes appropriate provision for deliveries and servicing in terms of road safety, traffic congestion and environmental impacts, in accordance with Policy JP-C8.

In regard to parking provision assessment, saved UDP Policy A1S 'Parking in New Development' is relevant and so is the Council's recent Parking Policy Note March 2023. This policy states that in new development, convenient, safe and secure provision will be required for:-

(a) Cycle and motorcycle parking and car parking for disabled people in accordance with the minimum standards adopted by the Council; and
(b) Car parking in line with the maximum standards adopted by the Council.

The revised Parking Policy Note March 2023 seeks to increase parking provision set out in saved UDP Policy A1S within new development sites, the maximum space numbers are not a fundamental requirement, and consideration can be given to site constraints, site locations and general design to allow a reduction in such provision.

The applicant has provided a Transport Assessment (TA) and a Travel Plan to support the application.

- *Impact on Local Highway Network*

The applicant has carried out an assessment of the impact of the development on the surrounding highway network and in particular the local junctions which will be affected by traffic associated with this development. Following the initial submission and consideration by the Highways Policy Officer, this required further assessment and in particular further remodelling of the A580 / A577 junction.

It was noted throughout the submitted information that HGVs would form the primary movements associated within the proposed development and Officers are satisfied that the surrounding highway network can accommodate the predicted levels of movements. Within the aforementioned assessment it was noted that the A580/A577 junction is currently operating over capacity; however, Committee will be aware that there is already a committed improvement scheme to take place at this junction funded by contributions from other developments including those at Garrett Hall, Parr Bridge and Mosley Common. With this improvement scheme in place, the impact of the development on this junction is acceptable.

In addition to the above it has been advised by the Council's Highway Policy Officer that this development should contribute to the upgrade and revalidation of MOVA (Microprocessor Optimised Vehicle Actuation) at the junction of A580/Chaddock Lane. The applicant has agreed to meet the £15,000 associated costs in this respect.

- *Vehicle and pedestrian access*

The proposed site access was fully approved under the outline permission for the site granted in 2017, and the access spine road is currently in situ. The access is considered appropriate for the movement of large vehicles that could be expected to arrive / exit the proposed development.

The proposed layout is considered to be acceptable and will be able to ensure that a large articulated vehicle can enter and leave the site in a forward gear. The vehicle parking layouts allow for the free flow of traffic and vehicles will be able to enter and leave a bay in one manoeuvre.

There is a need to improve pedestrian access from the proposed parking areas to each unit and such amendments can be obtained through a condition.

- *Vehicle and cycle parking*

Firstly, it is noted that the site is located in a sustainable location with access to public transport, walking and cycling opportunities.

The proposal provides a total of 328 no. car parking spaces and 77 no. HGV parking bays. In addition to this provision, 60 no. cycle parking spaces will be provided.

In line with the Council's adopted parking note, the maximum levels referred to with Appendix 9 of the saved UDP are for reference only and the site specifics must be applied. In this case, the proposed car parking levels for each unit fall within the maximum levels required for the class B8 storage planning use, i.e. 1 per 100sqm and a little below the maximum levels for B2 use, i.e. 1 per 100sqm. The applicant has submitted projected levels of staffing, being in the region of 500 employees. However, this is over a 24-hour period and not all staff would be present on site at any one time. When taking account of the sustainability of the site and the level of parking provided, which includes disabled parking, Officers are satisfied that the proposed car parking level is acceptable. The level of HGV parking is also considered to be acceptable when compared with the number of loading bays provided in each unit.

The level of cycle parking is considered to be acceptable, although further details of this provision will be required by way of a condition as local policies require such areas to be both secure and covered.

- *Conclusion on transport, accessibility and parking*

The application is accompanied by a Travel Plan and a Transport Assessment, and these documents have been reviewed by the Council's Highways Policy Officer.

It is accepted that the site is located in a sustainable meaning that future employees have a genuine alternative to car travel. Furthermore, all of the proposed units include cycle parking areas for future employees.

The proposed development would utilise an existing access, which has been partly constructed under the approved outline scheme for the site. This access, including its visibility splays, remain acceptable for the projected use associated with the proposed development.

A trip generation exercise has been undertaken and an assessment has been undertaken of the local highway network, including the junctions that are likely to be affected by associated traffic. Subject to a financial contribution for improvements at the A580/Chaddock Lane, Officers are satisfied that the submitted assessment is acceptable and the impacts on the local highway network will be minimal and would not meet the tests set down in the NPPF whereby developments can only be refused on highway grounds where an unacceptable impact on highway safety would arise or the impacts on road networks would be severe.

On the basis of the above, the proposal complies with Core Strategy Policy CP7, PfE Policies JP-C7 and JP-C8 and saved UDP Policy A1S from highways and parking perspectives respectively.

Trees, landscaping, ecology and biodiversity

Paragraph 180 (d) of the NPPF states that policies and decisions should contribute to and enhance the natural environment, resulting in net gain and no net loss. The Environmental Bill adopted by the Government requires a mandatory 10% net gain to be achieved and came into force in February 2024. This is a requirement for new major applications submitted following the adoption of this policy and can be achieved either on site, through biodiversity gains, registered off-site biodiversity gains or biodiversity credits and in all factors, must be managed long-term across a 30-year management period.

The revised NPPF and PfE Policy JP-G8 seek to support the policy objective of BNG, with the PfE policy requiring a net gain of no less than 10%.

In this respect, the applicant submitted a biodiversity metric which confirms that the proposed development will result in a loss of approximately 69 biodiversity units, however, 58 of these will be replaced through the proposed landscaping scheme on-site. A management and maintenance plan will be required to ensure that this scheme is delivered and retained on site. The applicant has acknowledged that the proposed scheme results in net loss on-site and has worked with the Council to provide a scheme whereby the required 10% net gain will be provided at Bedford Colliery. The Council has confirmed that it will cost just under £200,000 to provide the required net gain to achieve policy compliance at this site, and the applicant has agreed to meet these costs.

The applicant has provided an ecological assessment which has considered the impact on species who use or may use this site for foraging or habitat. The submitted assessments have been reviewed by the Council's ecology advisors and found acceptable. Subject to conditions, Officers are satisfied that the proposal will not have an unacceptable impact on the status of protected species in the local area.

As outlined earlier in this report, the proposed development will significantly alter the character of this PEA site as currently is. However, a comprehensive landscaping scheme has been provided which will mitigate this loss to some extent. This scheme is focused on the site boundary areas, but some cover will also be provided within the site, mainly to line the routes of the public footpaths which are being retained/redirected as part of the proposal. Further details of the scheme, such as the use of specific species, are required and these can be obtained through a condition.

On the basis of the above, Officers can confirm that the proposed development is fully compliant with the BNG requirements as required in Policy JP-G8 of the PfE and the NPPF. Furthermore, there are no unacceptable impacts on local species, subject to conditions and a suitable landscaping scheme has been provided in this context.

Technical matters

- *Flooding and drainage arrangements*

The site is located within Flood Zone 1 and the applicant has submitted a Flood Risk Assessment (FRA) which considers the potential impact of the development on flood risk within and around the application site. The application has also been assessed by the Environment Agency (EA) who raised no objections to the development.

The submitted report meets the requirements of the NPPF by considering the impact of runoff generated by the proposed development onto the downstream catchment area and assesses the risk of flooding on site and in the surrounding area from various sources.

The submitted FRA advises that the given the location of the site and the nature of the development proposed, there a low risk of flooding as a result of the proposal and that there are no known flooding events in this area and satisfactorily concludes that the risk of flooding as a result of the proposed development is low.

The proposed drainage scheme takes account of the details approved under the outline permission for the site in 2017 and also the fact that the residential parts of that permission have now been built out. It remains the case that surface water drainage by way of infiltration is not achievable on this site. The discharge point for the drainage strategy and the restricted discharge rates remains as previously approved.

The surface water drainage scheme is based on the collection of run-off water from the proposed units as well as the proposed hard surfaced areas in buried attenuation tanks located within the service yard areas of each unit, with outfall flows restricted to greenfield runoff rates.

There is an existing detention basin located in the south-east of the site which is to remain in situ. As part of the original outline approval (which approved the access details), this basin collects runoff from the existing spine road, and this will continue to be case going forward. Other sustainable urban drainage systems, or SuDS, will be used within the overall surface water drainage scheme including permeable paving.

In terms of foul water drainage, it is proposed to install a new pipe network to serve the building units on site which will connect to the existing system as a point within the spine road. This will utilise much of the pipe network previously installed as part of the outline approval.

The proposed drainage schemes have evidenced that the gas main located within the application site has been taken account of.

Whilst Officers are satisfied with the level of detail provided at this stage and the principle of the drainage proposals, it is considered necessary to obtain details of management and maintenance arrangements together with full details of the drainage schemes by way of a condition. Officers are satisfied that the applicant has given due consideration to the hierarchy of sustainable drainage methods as outlined in the NPPF and associated guidance.

In summary, Officers are satisfied that the proposal, subject to the aforementioned requirements to be controlled via condition, is in accordance with Policy CP16 of the Core Strategy, PfE Policy JP-S4 and section 14 of the NPPF.

- *Ground conditions*

The NPPF requires planning decisions to ensure that new development is appropriate for its location. Where a site is affected by contamination or land stability issues, the responsibility for securing a safe development rests with the developer and/or landowner (paragraph 179).

Core Strategy Policy CP17 'Environmental Protection' states that the Council will tackle land contamination and land stability issues, primarily on sites affected by past industrial uses and coal mining activities, by promoting the appropriate re-use of such sites and supporting the identification of contamination and stability issues and appropriate remediation.

In terms of land contamination, a Phase 1 Site Investigation report has been submitted which is considered to be an acceptable preliminary risk assessment. Further investigations and mitigation will be required following demolition and again prior to occupation and these investigations can be captured by a condition.

It is further recognised that the site falls within a Development High Risk Area in relation to coal mining. The applicant has submitted Coal Mining Risk Assessment which has been assessed and deemed acceptable by the Coal Authority. However, further intrusive works are required prior to any works taken place, but it is acceptable that these can be secured by a condition.

Observations on the representations

A number of the points of objection raised in the representations have been addressed within this report, particularly around noise, odour and traffic issues.

.

With regard to the remainder of the points that comprise of material planning considerations:

- The site is not located within the Green Belt, but within an allocated Primary Employment Area.

- The Outline permission granted for this site in 2017 did not include details of the industrial element of the development as the scheme was in outline form only with only details of the access fully approved. The linked residential schemes obtained reserved matters which determined their scale, size and appearance. The industrial element of the outline scheme never received such an approval, hence the need for this application.

Conclusion

Section 38(6) of the Planning and Compulsory Purchase Act 2004 and Section 70(2) of the Town & Country Planning Act 1990 require planning applications to be determined in

accordance with the statutory development plan, unless material considerations indicate otherwise. NPPF paragraphs 11 to 14 also emphasise this requirement.

Following assessment, the proposed development is considered compliant with the relevant national and local planning policy and guidance. The principle of the proposed development, within a Primary Employment Area is acceptable and no significant or unacceptable issues that haven't or can't be suitably mitigated to acceptable levels have been identified in relation to the impact on local residents, highway safety, parking capacity, design or appearance. The proposal therefore meets with the relevant material considerations and the objectives of Place for Everyone, the Core Strategy, saved UDP Policies and the national planning policy objectives contained within the revised NPPF.

The revised NPPF states that development proposals that accord with the development plan should be approved without delay. Whilst the concerns of local residents are noted and have been considered, the proposal is assessed to be consistent with the Development Plan as a whole, as well as the relevant policy objectives within the revised NPPF, the Council's adopted planning guidance and all other material considerations.

On this basis, and for the reasons detailed within this report, Members are therefore recommended to resolve to approve the application subject to the conditions listed within this report.

Human Rights Act 1998

Officers have considered the Human Rights Act 1998 in reaching a recommendation to grant planning permission, subject to conditions. Officers have considered the potential interference with the rights of the owners/occupiers of surrounding properties under Article 8 and/or Article 1 of the First Protocol of the Act and consider that it is proportionate.

Officers have also considered the interference with the human rights of the applicant under Article 8 and/or Article 1 of the First Protocol caused by imposing conditions.

Officers consider that the conditions are necessary to protect the rights and freedoms of others and to control the use of property in accordance with the general interest. The interference is therefore justifiable and proportionate.

Section 17 of the Crime and Disorder Act 1998

Officers have considered, with due regard, the likely effect of the proposal on the need to reduce crime and disorder as part of the determination of this application, in accordance with section 17 of the Crime and Disorder Act 1998. In reaching a recommendation to approve, officers consider that the proposal will not undermine crime prevention or the promotion of community safety.

Officer recommendation

(1). That Committee resolve to approve the application and grant planning permission for the proposed development for the reasons given in this report, subject to the following:

- The conditions specified in this report below;
- Satisfactory completion of a Section 106 Agreement containing the following financial contributions and provisions:
    - Highway contribution of £15,000; and
    - The provision of £199,332 for biodiversity enhancement at Bedford Colliery.

(2) Authority be delegated to the Assistant Director – Legal, Governance and Elections to enter into the said Agreement and to the Director of Place to issue the Decision Notice subject to the satisfactory completion of the above matters; or, if the Section 106 Agreement is not completed within six months of the date of this Committee, to refuse the application at their discretion.

Proposed conditions and reasons for the conditions:

1. The development hereby approved must be begun not later than the expiration of three years beginning with the date of this permission.

Reason: *Required to be imposed pursuant to Section 91 of the Town and Country Planning Act 1990 (as amended).*

2. The development hereby approved shall be carried out in accordance with the details indicated on the following plans and drawings:

- WIG-PHP-00-00-DR-A-4557-001-P37 (site plan);
- WIG-PHP-00-00-DR-A-4557-005- P12 (GA site sections);
- WIG-PHP-00-00-DR-A-4557-004-P12 (site finishes); and
- Drawing number 900 (existing and proposed site levels layout).

<u>Unit 1</u>

- WIG-PHP-01-DR-A-4557-200-P6 (GA Plan – level 00);
- WIG-PHP-01-ZZ-DR-A-4557-400-P4 (GA Section);
- WIG-PHP-01-ZZ-DR-A-4557-300-P6 (elevations);
- WIG-PHP-01-XX-DR-A-4557-202-10 (GA Plans – office);
- WIG-PHP-01-RF-DR-A-4557-205-P4 (roof plan); and
- WIG-PHP-01-01-DR-A-4557-201-P6 (GA Plan – level 01).

<u>Unit 2</u>

- WIG-PHP-02-01-DR-A-4557-200-P3 (GA Plan – level 00);
- WIG-PHP-02-ZZ-DR-A-4557-400-P4 (GA Sections);
- WIG-PHP-02-ZZ-DR-A-4557-300-P3 (elevations);

- WIG-PHP-02-XX-DR-A-4557-202-P4 (GA plans office);
- WIG-PHP-02-RF-DR-A-4557-205-P4 (roof plan); and
- WIG-PHP-02-RF-DR-A-4557-201-P3 (GA Plan – level 01).

Unit 3

- WIG-PHP-03-01-DR-A-4557-201-P7 (GA plan – level 01);
- WIG-PHP-03-01-DR-A-4557-200-P7 (GA Plan – level 00);
- WIG-PHP-03-ZZ-DR-A-4557-400- P5 (GA section A-A);
- WIG-PHP-03-ZZ-DR-A-4557-300-P8 (elevations);
- WIG-PHP-03-XX-DR-A-4557-202-P9 (GA plans office); and
- WIG-PHP-03-RF-DR-A-4557-205 P5 (roof plans).

Unit 4

- WIG-PHP-04-01-DR-A-4500-201-P6 (level 01);
- WIG-PHP-04-00-DR-4500-200-P6 (level 00);
- WIG-PHP-04-ZZ-DR-A-4500-400-P6 (section A-A);
- WIG-PHP-04-ZZ-DR-A-4500-300-P5 (elevations);
- WIG-PHP-04-XX-DR-A-4500-202-P6 (GA office plans); and
- WIG-PHP-04-RL-DR-A-4500-205-P6 (Roof plan).

Reason: *For the avoidance of doubt and to ensure a satisfactory standard of development that is carried out only as approved by the Local Planning Authority, in accordance with the policies contained within the Wigan Local Plan Core Strategy, Places for Everyone, the saved policies of the Wigan Replacement Unitary Development Plan and the National Planning Policy Framework.*

3. Prior to the commencement of any part of the development hereby approved, including site clearance, excavation or construction works or the entry of vehicles or plant into the site, all existing retained trees and hedges on and adjacent to the site, shall be physically protected from damage by plant, equipment, vehicles, excavation, deposit of excavated material and any other cause in accordance with the Tree Protection Plan reference '2262-22-04 rev 02 (1 of 2 and 2 of 2)'. The fencing shall be maintained for the duration of the development operations and no operations or storage whatsoever shall take place within the fenced protection areas of the development site.

Reason: *The measures are necessary prior to the commencement of development since they are fundamental to the initial site preparation works and the existing trees and shrubs represent a visual amenity which the Local Planning Authority consider should be substantially maintained, having regard to Policy CP10 of the Wigan Local Plan Core Strategy, Policies JP-G1, JP-G2 and JP-G8 and saved Policy EV2C of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

4. The use of the development hereby approved shall not commence until the following measures to protect the existing residential properties from noise from the proposed development have been fully implemented:

- The installation of acoustic fencing as detailed in Figure 6.1 “Noise Contour Plot Daytime with Mitigation (LAeq1hour)” of Tetra Tech’s noise report number 784-B034505, Revision 7, dated 14th May 2024, and submitted by the applicant.

Once fully installed, the above approved measures shall be retained thereafter.

Reason: *To minimise the impact of noise on existing development in the vicinity, having regard to Policy CP17 of the Wigan Local Plan Core Strategy, saved Policy EV1B of the Replacement Wigan Unitary Development Plan and the National Planning Policy Framework.*

5. No development approved by this planning permission shall commence until a remediation strategy to deal with the risks associated with contamination of the site in respect of the development hereby permitted, has been submitted to, and approved in writing by, the local planning authority. This strategy will include the following components:

Post any demolition necessary but prior to any further development commencing:

1. An updated site investigation scheme following on-site pressure grouting, including the results of subsequent additional gas monitoring, an updated ground gas risk assessment, and a combustion assessment, identifying the risk to all receptors that may be affected, including those off-site.
2. The results of the updated site investigation and the detailed risk assessment referred to in (1) and, based on these, an options appraisal and an updated remediation strategy giving full details of the remediation measures required, including a Gas Protection Design Report if gas protection measures are required, and how they are to be undertaken.
3. A verification plan providing details of the data that will be collected in order to demonstrate that the works set out in the remediation strategy in (2) are complete and identifying any requirements for longer-term monitoring of pollutant linkages, maintenance and arrangements for contingency action.

Prior to the occupation of the development:

4. Prior to any part of the permitted development being occupied a verification report demonstrating the completion of works set out in the approved remediation strategy and the effectiveness of the remediation shall be submitted to, and approved in writing, by the local planning authority. The report shall include results of sampling and monitoring carried out in accordance with the approved verification plan to demonstrate that the site remediation criteria have been met.

Any changes to these components require the written consent of the local planning authority. The scheme shall be implemented as approved.

Reason: *Prior approval of such details is necessary since they are fundamental to ensure the development does not contribute to and is not put at unacceptable risk from or adversely affected by contamination having regard to Policy CP17 of the Wigan Local Plan Core Strategy, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

6. No development hereby approved shall commence until;

a) A scheme of intrusive investigations has been carried out on site to establish the risks posed to the development by past coal mining activity, and;

b) Any remediation works and/or mitigation measures to address land instability arising from coal mining legacy, as may be necessary, have been implemented on site in full in order to ensure that the site is safe and stable for the development proposed development.

The intrusive site investigations and remedial works shall be carried out in accordance with authoritative UK guidance.

Reason: *To ensure that the development is not put at unacceptable risk from or adversely affected by stability issues arising from coal legacy issues having regard to policies CP10 and CP17 of the Wigan Local Plan Core Strategy, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

7. Prior to the first occupation of any part of the development hereby approved, or it being taken into beneficial use, a signed statement or declaration prepared by a suitably competent person confirming that the site is, or has been made, safe and stable for the approved development shall be submitted to the Local Planning Authority for approval in writing. This document shall confirm the methods and findings of the intrusive site investigations and the completion of any remedial works and/or mitigation necessary to address the risks posed by past coal mining activity.

Reason: *To ensure that the development is not put at unacceptable risk from or adversely affected by stability issues arising from coal legacy issues having regard to policies CP10 and CP17 of the Wigan Local Plan Core Strategy, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

8. Notwithstanding the details hereby approved, the first occupation of any building hereby approved shall not commence until all screen walls and/or fences associated with that building have been installed in accordance with plan reference 'WIG-PHP-00-00-DR-A-4557-001-P37'.

Reason: *To ensure that the details of the development are satisfactory and in order to protect the amenities of local residents, having regard to Policies CP10 and CP17*

of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.

9. Prior to occupation of any part of the buildings hereby approved, an Electric Vehicle Infrastructure Strategy and Implementation Plan shall be submitted to, and approved in writing by, the Local Planning Authority. The scheme shall include details of the number, location and maintenance of electric vehicle charging points for each unit, amounting to a minimum of 5% of the total vehicle parking provision within the development. The electric vehicle charging points shall be implemented in accordance with the approved details and timescales for implementation, with the agreed details maintained in a working manner thereafter. The Implementation Plan will provide details of how the future installation of electric charging points associated with that phase could occur in parking or servicing areas not provided with charging points from the outset.

Reason: *To ensure that adequate provision is made for smart electric vehicle charging points on the site; and to establish measures to encourage non-car modes of transport having regard to Policies CP7 and CP17 of the Wigan Local Plan Core Strategy, Places for Everyone Policy JP-S5 and saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

10. Prior to the first occupation of the buildings hereby approved, a scheme for the provision of cycle parking for the respective building, in accordance with the Council's relevant standards in force at the time, must be submitted to, and approved in writing by, the Local Planning Authority. The scheme shall also be implemented as approved before the respective building is brought into use and shall be retained as such thereafter. Notwithstanding the provisions of the Town and Country Planning Act (General Permitted Development) Order 1995 (or any Order revoking or re-enacting that Order) no building works, which reduces this provision, shall take place except following the express grant of planning permission by the Council.

Reason: *To provide secure cycle storage arrangements, and to encourage sustainable modes of transport having regard to Policies CP7, CP10 and CP17 of the Wigan Local Plan Core Strategy, Policy JP-C6 of Places for Everyone and the revised National Planning Policy Framework.*

11. The use of the development hereby approved shall not commence until the provision of vehicle parking spaces within the site has been implemented in accordance with the details shown on approved drawing reference 'WIG-PHP-00-00-DR-A-4557-001-P37'. Notwithstanding the details hereby agreed within Condition 2 (plans) of this permission, any new hard surface(s) shall be made of porous materials, or provision shall be made to direct run-off water from the hard surface(s) to a permeable or porous area or surface within site.

Reason: *To ensure there is not a negative impact on the surrounding highway network, having regard to Policy CP7 of the Wigan Local Plan Core Strategy, saved*

Policy A1S of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework, and to protect neighbouring amenity having regard to Policy CP17 of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.

12. The development hereby approved shall be constructed and undertaken in accordance with the physical security specifications as set out in the Crime Impact Statement (reference '2022/0247/CIS/01, Version A', dated:11 May 2023).

Reason: *To ensure the development is designed to reduce the risk of crime and anti-social behaviour, in accordance with Wigan Local Plan Core Strategy Policies CP10 and CP17 and the revised National Planning Policy Framework.*

13. No development works shall take place until details of a Construction Training and Employment Management Plan (CT&EMP) relevant to the development hereby approved has been submitted to, and approved in writing by, the Local Planning Authority. The CT&EMP will aim to promote training and employment opportunities for local people and include:

- Measures to ensure the owner and contractors work directly with local employment and training agencies;
- Targets for employing local labour;
- Targets for work experience opportunities;
- Measures to provide training opportunities in respect of any new jobs created; and
- Requirements to submit monitoring information on the plan at regular intervals to the Local Planning Authority.

The development shall be carried out in accordance with the agreed CT&EMP and any amendments to the CT&EMP shall be agreed in writing with the Local Planning Authority.

Reason: *Prior approval of these details is required as they are fundamental in order to ensure the development contributes positively to the local economy and employment provision in the area, in accordance with Policies JP-J1 and JP-J2 of Places for Everyone and the revised National Planning Policy Framework.*

14. No development hereby approved shall be occupied until details of a Training and Employment Management Plan (T&EMP) relevant to that phase / hereby approved building, has been submitted to, and approved in writing by, the Local Planning Authority. The T&EMP(s) will aim to promote training and employment opportunities for local people and include:

- Measures to ensure the owner and contractors work directly with local employment and
- training agencies;
- Targets for employing local labour;
- Targets for work experience opportunities;

- Measures to provide training opportunities in respect of any new jobs created; and
- Requirements to submit monitoring information on the plan at regular intervals to the Local Planning Authority.

The development shall be occupied in accordance with the agreed T&EMP(s) and any amendments to the T&EMP(s) shall be agreed in writing with the Local Planning Authority.

Reason: *Prior approval of these details is required as they are fundamental in order to ensure the development contributes positively to the local economy and employment provision in the area, in accordance with Policies JP-J1 and JP-J2 of Places for Everyone and the revised National Planning Policy Framework.*

15. Notwithstanding the details hereby approved, prior to the commencement of any development hereby approved including site clearance and remediation, no development shall take place until a site-specific Construction Environmental Management Plan (CEMP) has been submitted to, and has been approved in writing by, the Local Planning Authority. The CEMP must demonstrate the adoption and use of the best practicable means to reduce the effects of noise, vibration, dust and site lighting and shall include, as a minimum, the following details:

-Schedule of demolition and construction works and programme dates.
- Hours of construction which shall not exceed the following hours:
08:00-18:00, Monday to Friday,
08:00-13:00 on Saturdays,
- No construction work taking place on Sundays or Public Holidays, and
- Deliveries to the site, the removal of plant, equipment, machinery and waste from the site and the exportation or importation of materials to the site will not be allowed to take place between 08:00-09:00 and 15:00-16:00, Monday to Saturday, and not all on Sundays or Public Holidays
- Traffic Routes.
-Measures to control disruption.
- Methods to be employed to control and monitor noise, dust (based on a risk assessment in accordance with the latest Institute of AQM document 'Guidance on the assessment of dust from demolition and construction - 2014') and vibration impacts.
- Health and Safety requirements.
- Monitoring and Management.
- Construction Heavy Goods Vehicle routing.
- Details of the precautions to be taken to prevent the deposit of mud, grit and dirt on public highways by vehicles travelling to and from the site.
- A management plan to control surface water runoff during the construction phase and measures to be adopted to mitigate the risk to ground and surface waters from contaminated surface runoff.
- Measures for controlling the use of site lighting whether required for safe working or for security purposes.
- Procedures for maintaining good public relations including complaint management, public consultation and liaison.

The approved scheme shall be implemented to the full written satisfaction of the Local Planning Authority before the construction works are commenced and shall be maintained for the duration of the construction works.

Reason: *Prior approval of such details is necessary since they are fundamental to the initial site preparation works, to safeguard the amenities of the adjoining premises and the area generally, to provide an acceptable level of mitigation for air quality and to ensure surface water is appropriately managed during the construction phase and to provide for the safety and convenience of users of the highway and for the free flow of traffic, having regard to Policies CP7, CP16 and CP17 of the Wigan Local Plan Core Strategy, Policies JP-S5 and JP-C4 of Places for Everyone, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

16. The development hereby approved shall be carried out in accordance with the submitted Energy Statement (CPW, 220568) at all times.

Reason: *To ensure that the development provides a suitable amount of energy from low carbon sources in accordance with Policies CP10 and CP13 of the Wigan Local Plan Core, Places for Everyone Policy JP-S2 and the revised National Planning Policy Framework.*

17. The development hereby approved in relation to the employment units, as shown on drawing reference 'WIG-PHP-00-00-DR-A-4557-001-P37 (Proposed Site Layout)', shall be constructed to achieve a minimum rating of Building Research Establishment Environmental Assessment Method (BREEAM) 2014 'Very Good'. Within 12 months of the occupation of each unit, or within alternative timescales to be previously agreed in writing with the Local Planning Authority, the relevant certification demonstrating that BREEAM 'Very Good' has been achieved for the relevant unit shall be submitted to, and approved in writing by, the Local Planning Authority.

Reason: *To provide opportunities to maximise the sustainability of the development and to contribute to air quality improvements, having regard to Policy CP17 of the Wigan Local Plan Core Strategy, Policies SD1, JP-P6, JP-S2 and JP-S3 of Places for Everyone, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

18. With the exception of the detailed matters referred to by the conditions of this planning permission, the development hereby approved shall be carried out in accordance with the material details as specified in the approved plans listed in Condition 2 of this planning permission.

Reason: *To ensure that the external appearance of the buildings is satisfactory, having regard to Policy CP10 of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.*

19. Prior to the commencement of development hereby approved (excluding any demolition works), details of a sustainable surface water drainage scheme and a foul water drainage scheme shall be submitted to, and approved in writing by, the Local Planning Authority. The drainage schemes must include:

(i) An investigation of the hierarchy of drainage options in the National Planning Practice Guidance (or any subsequent amendment thereof). This investigation shall include evidence of an assessment of ground conditions and the potential for infiltration of surface water in accordance with BRE365;

(ii) A restricted rate of discharge of surface water agreed with the local planning authority (if it is agreed that infiltration is discounted by the investigations);

(iii) Levels of the proposed drainage systems including proposed ground and finished floor levels in AOD;

(iv) Incorporate mitigation measures to manage the risk of sewer surcharge where applicable; and

(v) Foul and surface water shall drain on separate systems.

The approved schemes shall also be in accordance with the Non-Statutory Technical Standards for Sustainable Drainage Systems (March 2015) or any subsequent replacement national standards. Prior to first occupation of any part of the proposed development, the drainage schemes shall be completed in accordance with the approved details and retained thereafter for the lifetime of the development.

Reason: *Prior approval of such details is necessary since they are fundamental to promote sustainable development and ensure that the development will be safe for its lifetime and to ensure flood risk is not increased elsewhere having regard to Policies CP16, CP17 of the Wigan Local Plan Core Strategy, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

20. Prior to the first use of the development hereby approved, a sustainable drainage management and maintenance plan for the lifetime of the development shall be submitted to the Local Planning Authority and agreed in writing. The sustainable drainage management and maintenance plan shall include as a minimum:

(i). Arrangements for adoption by an appropriate public body or statutory undertaker, or, management and maintenance by a management company; and

(ii). Arrangements for inspection and ongoing maintenance of all elements of the sustainable drainage system to secure the operation of the surface water drainage scheme throughout its lifetime.

The development shall subsequently be completed, maintained and managed in accordance with the approved plan.

Reason: *Prior approval of such details is necessary since they are fundamental to promote sustainable development and ensure that the development will be safe for its lifetime and to ensure flood risk is not increased elsewhere having regard to Policies CP16, CP17 of the Wigan Local Plan Core Strategy, saved Policy EV1B of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

21. The use of each building within the development hereby approved shall not commence until a scheme including the siting and appearance of refuse and recycling storage facilities within the site, has been implemented for the respective building in accordance with details previously submitted to, and approved in writing by, the Local Planning Authority. The agreed details shall be maintained at all times thereafter.

Reason: *To provide a secure waste and recycling area within the development and to assimilate the scheme into the wider area, having regard to Policies CP10 and CP17 of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.*

22. The development hereby approved shall adhere to the approved External Lighting Statement and Plan (reference: 70090159, September 2023, WSP). The approved details shall be maintained for the lifetime of the development.

Reason: *To ensure safe pedestrian access is provided along the planned footpath routes, to promote active travel, to safeguard the ecological value of the area and to safeguard the amenity of neighbouring amenity, having regard to Policies CP7, CP10, CP12 and CP17 of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.*

23. Prior to any earthworks or vegetation clearance taking place at the site, a method statement detailing control and/or avoidance measures Giant Hogweed present on, or affecting, the site shall be submitted to, and agreed in writing by, the Local Planning Authority. The agreed method statement shall be adhered to and implemented in full accordance with the approved details at all times.

Reason: *Prior approval of such details is necessary since they are fundamental to ensure the development is not put at unacceptable risk from, or adversely affected by, and would not lead to the spread of invasive species, having regard to Policy JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

24. Prior to any vegetation clearance or earthworks being undertaken at the site, a reasonable avoidance measures method statement for mammals and amphibians covering both the site clearance and construction phase, shall be submitted to, and

agreed in writing by, the Local Planning Authority. Development shall only be carried out in complete accordance with the approved details.

Reason: *Prior approval of such details is necessary since they are fundamental to ensure the development does have a detrimental impact on mammals having regard to Policy JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

25. No removal of, or works to, any trees and shrubs or works to or demolition of buildings and structures that may be used by breeding birds shall take place on site between 1st March and 31st August inclusive, unless a competent ecologist has undertaken a careful, detailed check of vegetation and structures for active birds' nests immediately before the vegetation is cleared or works commence and provided written confirmation that no birds will be harmed and/or that there are appropriate measures in place to protect nesting bird interest on site. Any such written confirmation should be submitted to the local planning authority.

Reason: *To ensure that the proposals would not have a detrimental impact on nesting birds, having regard to having regard to Policy JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

26. The development hereby approved shall proceed in accordance with the agreed mitigation approach for Great Crested Newts as outlined in the submitted Ecological Assessment (reference '19314-Eco_B', dated: 7 September 2023 and prepared by The Ecology Practise) and the submitted District Level Licensing Certificate (enquiry number: 'DLL-ENQ-GMAN-00027') unless otherwise agreed in writing by the Local Planning Authority before any works take place.

Reason: *To ensure that the proposals would not have a detrimental impact on great crested newts, having regard to having regard to Policy JP-G8 of Places for Everyone and the National Planning Policy Framework.*

27. The development hereby approved shall adhere to the submitted Ecological Assessment (reference: '19314-Eco_B', dated 7 September 2023 and prepared by The Ecology Practise) at all times.

Reason: *To ensure that the proposals would not have a detrimental impact on protected species, having regard to having regard to Policy JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

28. The development hereby approved shall adhere at all times to the recommendation outlined in section 4.2 of the accompanying Bat Report (reference: '19314-BR_A', dated: April 2024 and prepared by The Ecology Project).

Reason: *To ensure that the proposals would not have a detrimental impact on bats, having regard to having regard to Policy JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

29. Notwithstanding the details shown on the hereby approved plans, prior to the commencement of any above ground works on site, a biodiversity management and maintenance plan for a period of 30 years, including the initial management and maintenance for new tree planting within the development, shall be submitted to, and approved in writing by, the Local Planning Authority. The agreed plan shall be implemented in full accordance with the agreed details thereafter.

Reason: *To enhance the ecological value and biodiversity across the development site, in accordance with Policy JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

30. Notwithstanding the details hereby approved, prior to the commencement of the construction of any buildings or hard surfaces hereby approved, full details of the soft landscape works, with an associated implementation plan, shall be submitted to, and approved in writing by the Local Panning Authority. These details shall include:-

- Schedules of plants and trees, noting species, plant sizes and proposed numbers/densities.

All planting shall be implemented in accordance the management and maintenance plan to be secured under Condition 29. Any trees or plants which die, become diseased, or are removed during the maintenance period shall be replaced with specimens of an equivalent species and size.

Reason: *Prior approval of such details is necessary since they are fundamental to ensure the development would be assimilated into its surroundings and for the protected of neighbouring residents, and to enhance the ecological value and biodiversity across the development site, having regard to Policies CP10 and CP17 of the Wigan Local Plan Core Strategy, Policies JP-G1, JP-G2 and JP-G8 of Places for Everyone and the revised National Planning Policy Framework.*

31. Except for site clearance and remediation, and notwithstanding the details hereby approved, no development shall take place until full details in the form of scaled plans and/or written specifications have been submitted to, and approved in writing by, the Local Planning Authority to illustrate the following:

a) The measures to be taken to protect the use of the retained Public Right of Way during the construction phase.
b) Method(s) of surface materials and edging of the diverted Public Rights of Way.

The development shall be carried out in accordance with the approved drawings and details.

Reason: *To ensure a satisfactory development of the site and a satisfactory standard of the finished design of the Public Right of Way in the interests of the amenity, accessibility and convenience of users of the Public Right of Way, having regard to Policies CP7 and CP10 of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.*

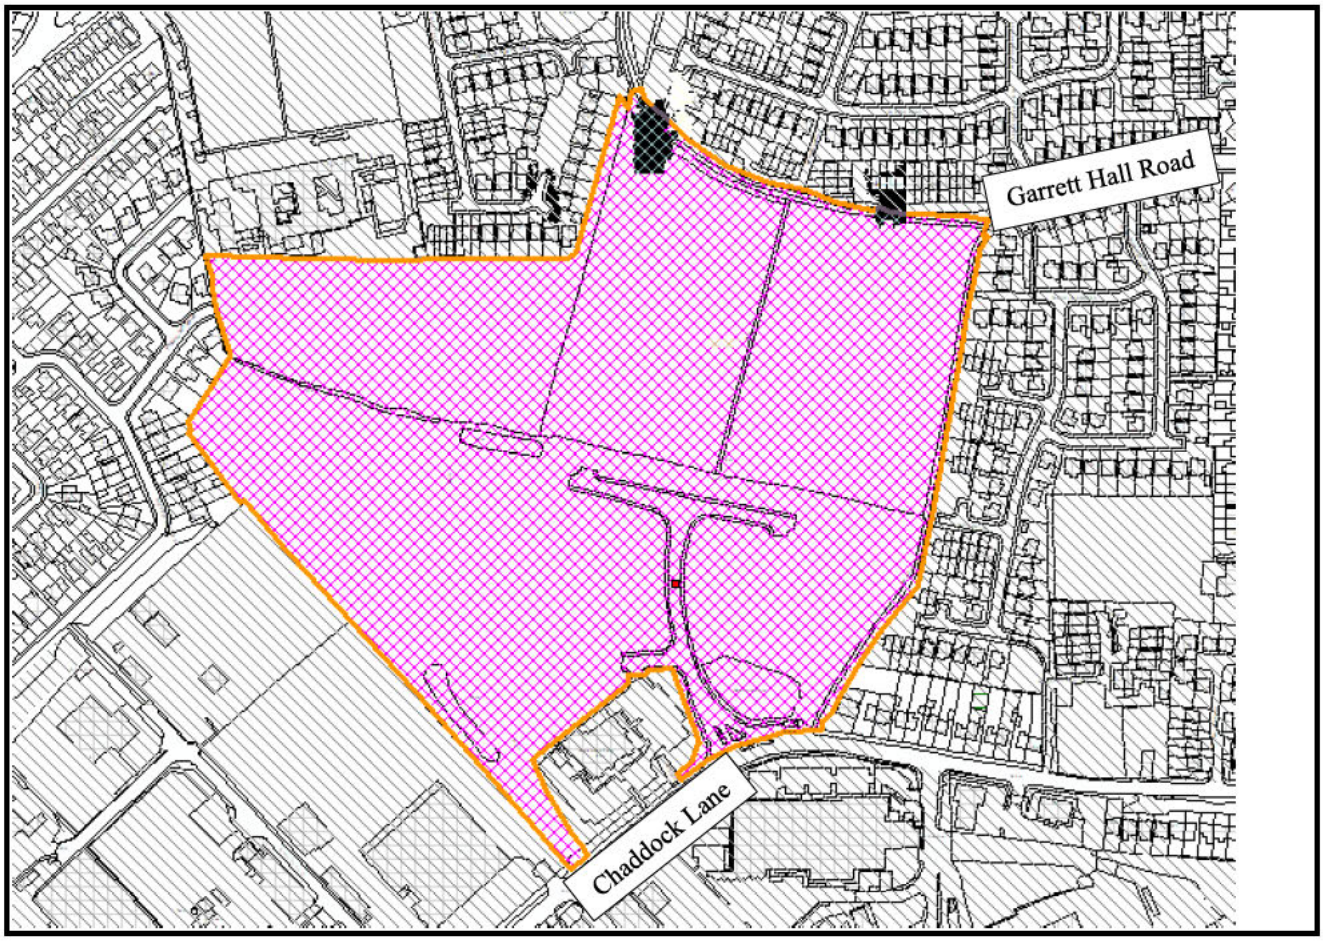
32. Except for site clearance and remediation, and notwithstanding the details hereby approved, no development shall take place until full details in the form of scaled plans and/or written specifications have been submitted to, and approved in writing by, the Local Planning Authority to illustrate the following details:

a) All types of surfacing (including tactile paving), kerbing and edging, and
b) full working drawings for showing the parking areas with pedestrian links to each of the units hereby approved.

The development shall be carried out in accordance with the approved drawings and details prior to first occupation of the development unless otherwise agreed in writing by the Council as Local Planning Authority.

Reason: *To ensure a satisfactory development of the site and a satisfactory standard of highway and footpath design and construction in the interests of highway and pedestrian safety and the amenity and convenience of highway users and pedestrians having regard to Policies CP7 and CP10 of the Wigan Local Plan Core Strategy, saved Policy A1S of the Wigan Replacement Unitary Development Plan and the revised National Planning Policy Framework.*

33. No materials or equipment shall be stored on the site outside the hereby approved buildings, save that waste and/or recycling materials that may be kept in appropriate facilities for removal periodically.



Reason: *To safeguard the amenities of the adjoining premises and the area generally and to ensure the appearance of the development is satisfactory, having regard to Policies CP10 and CP17 of the Wigan Local Plan Core Strategy and the revised National Planning Policy Framework.*

Application number: A/23/96226/MAJOR

Development Proposed: Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works

Location: Land at Astley Park Way, Worsley.

Ward: Tyldesley and Mosley Common.

Site Area

Subject: March Planning Committee Items

Afternoon all,

According to the Planning Committee tracker, the following items are potential applications for March Planning Committee:

- A/22/94743/MAJOR - Railway Rd Building Railway Rd Leigh, Construction of new buildings to accommodate 20 three storey dwellings and four storey apartment block with 20 apartments following partial demolition of a former gymnasium building [redacted]
- A/23/96503/CU - 131 Wigan Lane, Wigan, Change of use from dwelling house (Class C3) to 7 bed, 7 person house of multiple occupation Class Sui Generis) together with associated external alterations [redacted]
- A/23/95089/RMMAJ - Beefold Lane/Crab Tree Lane, RM 170 dwellings [redacted]
- A/23/96226/MAJOR - Land at Astley Park Way, Worsley, Development of warehousing units [redacted]
- A/23/96091/LB - Eckersley Mill, Outdoor Food and drink area [redacted]
- A/23/96090/FULL - Eckersley Mill, Outdoor food and drink area [redacted]
- A/23/95513/MAJOR and A/23/95514/MAJOR Residential Development, new access road, with separate application for new access road on its own. [redacted]

I'm in receipt of draft reports for A/23/96090/FULL & A/23/96091/LB, thank you [redacted].

I'm aware that A/22/94743/MAJOR and A/23/96226/MAJOR might need to pushed back to April, if so, [redacted] and [redacted] can you update the tracker please.

[redacted], we have a Teams called scheduled for A/23/95513/MAJOR and A/23/95514/MAJOR tomorrow – can I have updates on UU, EA and Drainage please as I assume the request for their responses has been escalated. I also need your take on why we still need to progress both applications for this development. Important that this one makes the March agenda.

[redacted], can I have urgent updates on A/23/95089/RMMAJ and A/23/96503/CU respectively please, and if these applications will be going to March (and if not, why not and what are the outstanding issues).

For reference I'm on leave next Monday and Friday, so we need to have the agenda & reports all concluded for close of play on Thursday, ready to be passed through to Dem Services on Friday.

[redacted], copying you in for reference on potential agenda items for March.

Any issues let me know, regards,

[redacted]

Hi [redacted]

Further to my email below, please could you confirm that the Council did not receive any notification of a legal challenge to the grant of planning application ref: A/23/96226/MAJOR?

Kind regards

Hi [redacted]

I hope you're well.

In [redacted] absence, for our comfort please could you confirm that the Council did not receive any notification of a legal challenge to the grant of planning application ref: A/23/96226/MAJOR? I believe the JR period would have passed on 25th September 2024 (6 weeks from decision date of 14th August 2024).

We haven't received any such notification from the Council so I assume that is because there has been no challenge – please can you confirm.

Kind regards

[redacted]

Sent: 07 May 2024 11:06
To: [redacted]
Subject: RE: A/23/96226/MAJOR Astley Business Park, Wigan

Morning [redacted]

Has the below moved on last week?

If not, my view is that firstly they need to secure 10% BNG as required by development plan policy in the PfE, and if not, why not? The landscape has moved on since [redacted] S.Lancs application, their proposal needs to be assessed on its own merits and there isn't a precedent here to fall back on.

On the cost of a unit, you need to understand what is driving the difference in figures, where does this come from? Is it the type of habitat being lost, the type of habitat they're replacing, where the new habitat is being located? From here I would suggest you're in a position to push back to the applicant on what is required.

My take here though is that we're confusing/muddying the BNG process for pre & post mandatory requirements, are they just paying £x amount for units, and if so, where are they being paid to? That's easy then once a cost of the units is agreed. If we're collecting money on the basis of spending it on Council land (on the basis the application came in before mandatory BNG and the land doesn't need to be formally registered – because no Council land is in respect of the latter), then between [redacted] and GMEU, we need to agree an ecological scheme that (with whatever they're putting on site) achieves 10% gain (that the applicant is in agreement with), then ask for a financial amount through a UU to implement such a scheme on Council land (no need to work out credits or units, just a scheme to get 10% and what that'll cost). This will need coordinating with Martin, GMEU and the applicant – [redacted], in his emails, has identified Council sites, in my mind what can he do on that land to achieve 10% and how much will it cost?

Hope the above helps and happy to discuss if easier, probably with [redacted] in the room.

Regards,

[redacted]

Subject: FW: A/23/96226/MAJOR Astley Business Park, Wigan

Hi [redacted]

Agreement on the BNG contribution is (I hope) the final point to agree on for the Astley Business Park application that will come before Members in June.

The total loss is agreed now at 10.95 units but we have yet to settle on the financial contribution which will achieve net gain.

The applicant is comparing it to the appeal decision on one of [redacted] at Lockett Road (see ref below) where by circa £5k per units appears to have been accepted. But lately the Council has been seeking around £20k per unit.

GMEU have advised using a formula to work out the contribution (see email attached) and [redacted] confused me as he included £12k per unit but this wouldn't be consistent with cases brought lately before Members and he has confirmed its up to us what we charge.

I have informed the agent that their offer is very low but I need some guidance on how to proceed given that we don't have a great degree of consistency on costs. See email attached from [redacted] too.

The agent is looking for another meeting on this one next week to discuss progress; I've been told they have paid the full PPA fee today.

[redacted]

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

[redacted]

On a separate matter, I write to set out our position in respect of the BNG offsetting and specifically a reasonable value to be ascribed to the biodiversity units to be offset to reach the 'no net loss' position. I note that Wigan Council with input from GMEU will also be providing its own view on this matter.

Having reviewed recent planning permissions in Wigan for comparable examples of offsetting requirements for a logistics scheme, we refer you to the Meridian 6 scheme by Glenbrook (Application Ref: A/21/92036/OUTMAJ) which was allowed on appeal in May 2023 following the refusal of consent.

The appeal decision and Committee report prior to the application being refused both refer to a £125,000 BNG contribution in order to reach a 'net gain' position (but not 10%, just a 'no net loss' – the same approach we are taking with the Astley scheme).

Looking at applicant's Planning Statement (see attached at page 62), it refers to a significant habitat loss of 24.99 units (59% net loss) and a 100% loss of hedgerow units. Dividing the £125k contribution by the habitat loss of 24.99 units it is essentially £5,000 a habitat unit.

Given the similarities of this scheme insofar as the type of development/use classes proposed on a greenfield site, we consider the habitat value of £5,000 per habitat unit to be a useful precedent and one that we feel should be applied to the PLP Astley scheme.

We welcome your view and how we progress matters pertaining to BNG offsetting / the S106 mechanism.

Kind regards

[redacted]

Hi [redacted]

Thank you for your email.

The re-consultations will be carried out by the end of the day.

As this application will not go before Members in March, please can you agree to an extension of time until April 12th (which is the Friday following April's planning committee).

Regards

Importance: High

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi [redacted]

Thank you for your email. Whilst clearly disappointing to have reached this position so very late in the process, we are where we are and are eager to resolve matters as soon as possible. As such, for completeness, the transport consultant has provided technical notes in response to each party's highway comments, as follows:

- 2nd Response to Wigan Council (WC) comments (i.e. [redacted] comments dated 16 Jan 2024) – Doc ref: 21714-HYD-XX-XX-RP-TP-1003.P02
- 3rd Response to WC comments (i.e. [redacted] comments dated 11 Feb 2024) – Doc ref: 21714-HYD-XX-XX-RP-TP-1004.P02
- SCC Response (i.e. SCC's comments dated 19 Jan 2024) – Doc ref: 21714-HYD-XX-XX-RP-TP-1005.P01

We have submitted the responses as 3 x separate technical notes as we feel it would be easier for the different parties to review/address, given the number of appendices also included within the individual documents.

In terms of addressing the Mosley Common junction point, Hydrock have included the following paragraph in the '3rd WC response' document which should provide sufficient justification / comfort as to why the junction has not been assessed:

Para 2.3.4 - Notwithstanding the above, Hydrock have reviewed their Traffic Flow Figures (which were previously provided along with the previously submitted TA as part of the application), and identified that the only junction within close proximity of the Mosley common site impacted by the proposed development flows is the A580 / A577 junction. However, as shown in our Traffic Flows figures, the total 2-way vehicle trips (associated with the proposed development) travelling along the A580 to/from the A580 / A577 junction only equates to 19 in the AM peak, and 23 in the PM peak, which is less than the 30+vehicle 2-way trips assessment criteria suggested by WCC. Therefore, this junction was not requested to be assessed. Furthermore, it should also be noted that this junction was also recently upgraded in 2023.

We would hope it isn't necessary given the clarity provided in the various notes/responses but if a meeting is required to resolve any residual matters following review of the above, please can you coordinate as soon as feasibly possible.

Please can you confirm receipt and please can you re-consult the three parties and request their urgent review of the above/attached and confirmation that highways matters are indeed now resolved so that we can move forward to Committee.

Kind regards

[redacted]

From: [redacted]
Sent: Friday, February 23, 2024 3:07 PM
To: [redacted]
Subject: A/23/96226/MAJOR Astley Business Park, Wigan

Good afternoon [redacted],

Apologies for the delay in providing an update for you but I can confirm that my highway colleagues have held further discussions earlier this week as planned, and the outcomes of those discussions have been shared with [redacted] and myself.

Taking all matters into account, I remain of the view that the points raised below must be addressed in full before Officers can make a positive recommendation to Members; the only exception to this is the reference made to the Mosley Common application. I accept that this was not a committed development when the application was submitted (nor did the Mosley Common application take this application into account in their transport studies). However, I would advise that providing some commentary on the combined impacts (now that it is a committed development) may provide some additional comfort to Members.

I appreciate that some of the points below were addressed in the Technical Note received early last week but it would be appreciated if this could be combined with a full response on all other points for publication and re-consultation.

The information is necessary to ensure that Officers can confirm that the proposed development is acceptable in highway terms and confidently relay this to Members. It is important to note that this application has attracted 100+ objections from local residents, a call in from local Councillors and an objection from James Grundy MP. One of the common themes running through all of these is the impact on the local highway network and as such, taking the application before Members at the present time and in advance of all matters raised by [redacted] and Salford Council being addressed, raises a significant possibility that Members could overturn or defer the application.

I appreciate that issues have been raised that were not done so at the pre-application stage and whilst that is regrettable, it is not a reason to move past them without addressing them in full to ensure that when this application is reported to Members, Officers can be confident of our positive recommendation being accepted.

On other matters, I can confirm receipt of the CGIs earlier this week. In addition, I have requested some further guidance from our ecology advisors on a potential financial contribution to achieve net gain off site but would welcome your position on this matter also as previously discussed.

Regards

www.facebook.com/WiganCouncilOnline

- *Year of application assessment unacceptable. Year of opening assessment (2027) must be undertaken instead plus a future year assessment (2032).*
- *Committed developments – Mosley Common (1,050 units) recently approved at planning committee and will impact operation of the adjacent highway network.*
- *Disagree with the proposed trip distribution. Majority of LGV movements turn right onto Chaddock Lane, rather than left. There is then a 50/50 split of HGV movements turning right/left. Given the proximity to SRN, it is anticipated that the majority of HGV movements would turn left onto Chaddock Lane before heading east on the A580.*
- *Strongly suggest trip distribution is based on turning count data, rather than JTW information from 2011.*
- *Numbers on trip distribution diagram incorrect. Certain values do not add up (Salford reference the same issue)*

- *Extant permission includes improvement schemes at A580/A572 and A580/A577 junctions, but this assessment does not even consider impact at these junctions.*

- *Depending on the split between B2/B8 use at the development there is potential for a requirement of up to approximately 550 spaces. The proposed provision is much lower, and we need to understand why that is the case. There are already issues with on-street parking on the adjacent highway network and any additional pressure needs to be avoided at all costs.*

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi [redacted]

You'll see from my email chasers to [redacted] (today and yesterday) that unfortunately we have not yet received an update from [redacted] following his meeting with [redacted] on Monday, despite what we had agreed at last week's meeting, which is clearly disappointing as we are no clearer as to what the Council's collective highways position is. Please can you chase internally and provide an urgent update?

It is worth noting the attached email trail between the transport consultants, Hydrock, and [redacted] (which [redacted] was cc'd to – I assume it is the same [redacted] that has now raised issues). The attached email trail clearly shows that Kenny and others were provided with the draft TA and Framework Travel Plan prior to submission, comments which were picked up in the submission versions. It is therefore all the more confusing that despite having had sight of a draft TA that new issues have been raised.

I trust you can provide us with an urgent update so that we are clear where we stand.

Kind regards

[redacted]

Planning Performance Agreement

Relating to

Land at Astley Park Way, Tyldesley, Wigan
Ref: A/23/96226/MAJOR

Made between

Wigan Council

and

Astley Unit Trust

12/12/23

1. Introduction

1. A Planning Performance Agreement (PPA) is a framework agreed between a Local Planning Authority and potential applicants for planning permission relating to the management of complex development proposals within the planning process. A PPA allows both the applicants and Local Planning Authority to agree a Project Plan and programme which will include the appropriate resources necessary to prepare, submit and determine the planning applications to a firm timetable.

2. This PPA in relation to the Astley Park Way site ("the site") has been developed between Wigan Council ("the Council") and Astley Unit Trust collectively referred to as "the Parties". The PPA sets out:

- A high level project structure capturing roles, contacts, reporting routes, and key dependencies / risks;
- A documented planning strategy including the form of each proposed application;
- A list of the information that will be required to support each application;
- A Project Plan incorporating a timetable for the submission of the various applications, and target dates for their validation and determination; and,
- The resource that the Council will make available with the intention of delivering the agreed planning programme, including planning case officer capacity, internal consultee capacity and senior oversight.

3. The ultimate aim of the PPA will be to ensure prompt, predictable, clear and robust decision making up to and including committee resolutions and finalisation of s106 agreement(s), and thereby facilitate the high-quality development of the site.

4. It should be noted that PPAs do not constitute a legally binding contract, nor are they intended to pre-judge or influence the determination of planning applications in any way. Their purpose is to assure the Parties that there is agreement as to the manner in which the Project is being taken forward.

5. At any given time during the Project, the agreed PPA can be updated or amended with the agreement of the Parties. Any proposed changes to the document will be discussed and agreed by the Project Group.

2. Background

1. The site is greenfield land allocated as a Primary Employment Area in the Wigan Local Plan Core Strategy and is located within the area known as Astley Business Park within the Borough of Wigan, situated towards the eastern part of the Borough. The site is also located to the north of the East Lancashire Road (A580). The site is an irregularly shaped parcel of land. The site largely comprises approx. 12.71ha of land primarily used as agricultural fields used for grazing, separated by hedgerows and a number of trees. A Site Location Plan can be found at **Appendix A**.

2. The description of the proposed development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

3. Project Structure

Project Group

1. The Parties will establish a Project Group whose remit will cover activity under this PPA. In relation to this PPA, the Project Group will:

- Keep the Project Plan and this PPA up to date, agreeing any necessary changes
- Oversee progress and delivery against the current Project Plan
- Act as the escalation route for issues arising that have not been resolved operationally

2. The Project Group will have the following core membership (lead contacts in **bold**):

The Council:

Name	Title / Company (Role)	Contacts	Role
[redacted]	[redacted]		[redacted]
[redacted]	[redacted]		[redacted]

Astley Unit Trust:

Name	Title / Company	Contacts	Role
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]

3. The Project Group will meet monthly or as required. In addition, the Lead Contacts for each party will meet on a fortnightly basis to progress the application, with third party consultants and officers attending meetings as necessary to progress and resolve technical planning matters.

4. Action notes from the Project Group's meetings will be circulated as soon as possible following each meeting. The Parties will ensure that all actions attributed to them are closed within the required timescales.

5. The Parties will also make themselves available for ad-hoc meetings or discussions as reasonably required to enable the planning process to progress in a timely fashion.

Lead Contacts

6. All communications should be channelled through the Lead Contacts identified in 3.2 above unless agreed otherwise:

4. Planning Strategy

Planning Submissions [for sites with multiple applications, or outline / RMs / conditions]

1. The Developer's intention is to lawfully commence development as soon as feasibly possible following the grant of consent. An application to discharge all pre-commencement planning conditions will therefore be prepared during the latter stages of the determination period for the full planning application and submitted to WMBC immediately after full planning consent is granted. As such, it is intended that the following planning submissions will be made:

Planning Application Schedule	Status
Full Planning Application	Submitted 03/10/23 and validated on 1st November 2023
Discharge of Pre-Commencement Conditions	Likely to be submitted end February 2023 / March 2024 (immediately following the grant of full planning consent)

5. Overarching Information

1. The full package of planning documents is available to view as necessary on the planning register (ref: A/23/96226/MAJOR)

6. Programme

Subject to the dependencies identified in Section 10, the Parties will use best endeavours to adhere to the programme set out below, in respect of the planning process. Any risks to the delivery of the Project in accordance with this programme will be identified and escalated through the reporting structures described in Section 3; and the Parties, acting reasonably, will seek to agree appropriate steps to mitigate the risk and / or adjustments to the programme.

Task	Responsibility	Timescale
Commence consultation	WMBC	On day of confirmation of valid application.
Initial meeting to discuss consultation responses, emerging officer feedback and to commence S106 discussions (namely highways and BNG offsetting obligations)	WMBC / Developer	Within 5 working days of the PPA being signed.
Summarise and circulate consultation response received	WMBC	Within 7 working days of closure of consultation period

Meeting to discuss officer feedback and current recommendation on the scheme and consultation responses	WMBC / Developer	Within 5 working days of receiving the consultation responses, or 10 working days if attendance from external consultees is required
Meeting to discuss application progress, draft conditions and draft S106 obligations	WMBC / Developer	At a point to be agreed by the Parties
Circulate proposed recommendation, draft conditions and draft S106 for final comment	WMBC	1 week prior to agenda being published
Planning Committee Agenda Published	WMBC	1 week before the committee meeting
Planning Committee Meeting	WMBC	Target Committee Meeting – 13th February 2024 or 12th March 2024 (subject to agreement of the recommendation, draft conditions and draft S106 Agreement)
S106 Agreement to be executed by required parties	WMBC / Developer	48 hours upon positive recommendation of Committee, subject to legal input and considerations.
Decision Notice issued (final decision notice subject to legal agreement if required)	WMBC	24 hours following completion of a legal agreement.

7. Council and PPA Fee

1. The Council will make available the following resource to support the delivery of the agreed programme and the management of the Project.

- Principal Planning Officer – 0.2FTE (to maximise flexibility and utilisation of the Council's resource this may be made up from the time of more than one officer).
- Service Manager – senior oversight, sponsor within Wigan Council, point of contact on Planning matters (nominally 0.2 days/week though this will be applied flexibly to suit the requirements of the Project).
- Other officers – to include but not limited to highway officers, drainage officers, Environmental Protection Officers, Senior Environmental Planner and GMEU.

2. To cover the costs incurred by the Council in committing to this guaranteed level of resource and providing a development team / project coordination function over this timescale/ and targeting the timescale described in this PPA, Astley Unit Trust will pay to the Council the sum of £[redacted] of the application fee (the "PPA Fee") upon signing of the PPA.

8. Key Dependencies and Risks

The key risks (R1-R2) and dependencies (D1) for the Project are identified as:

No.	Description	Consequence	Mitigation	Owner
R1	Delay to programme	Delay to determination of application	Revision of programme to be agreed between Astley Unit Trust and Wigan	Astley Unit Trust and Wigan Council

			Council and PPA period extended	
R2	Insufficient Council Resource	Potential delays to programme/determination of application	Wigan Council to discuss with Astley Unit Trust as soon as matter arises and appropriate mitigation to be agreed.	Wigan Council and Astley Unit Trust.
D1	Delayed / no response from Consultees	Delay to programme/insufficient information to determine application.	Mitigation will be dependent on the consultee who has failed to respond and appropriate mitigation agreed.	Wigan Council / Astley Unit Trust.

9. **Map of the site**

10. **PPA Signatories**

AGREEMENT

The above Planning Performance Agreement has been agreed between Wigan Council and Astley Unit Trust.

Hi

This was a major that went to committee in June. A copy of the Section 106 is attached, and on civica and needs to be redacted please.

The decision is due on 16 August, but if it can go before then that would be great.

Thanks

RECITALS

(A) The Council is the local planning authority for the purposes of the 1990 Act for the area in which the Site is located and a local authority for the purposes of the Acts.

(B) The Council is the highway authority for the purposes of the 1980 Act.

(C) The obligations contained in this Deed are planning obligations for the purposes of section 106 of the 1990 Act and covenants under the 1990 Act.

(D) The First Owner owns the freehold interest in the First Property registered at the Land Registry with Title Absolute.

(E) The Second Owner owns the freehold interest in the Second Property registered at the Land Registry with Title Absolute.

(F) The Chargee has an interest in the First Property by way of two registered charges over title number MAN117935 dated 19 September 2013 and 6 July 2020.

(G) The Application was submitted to the Council on 3 October 2023.

(H) On 11 June 2024 the Council's Planning Committee resolved to approve the Application subject to conditions and the completion of this Deed.

(I) The parties have agreed to enter into this Deed to secure the planning obligations and covenants contained herein with the intention that they may be enforced by the Council against the First Owner and its respective successors in title.

IT IS AGREED

1. DEFINITIONS AND INTERPRETATION

1.1 The following words and phrases shall, unless the context otherwise requires, bear the following meanings:-

"1980 Act"	means the Highways Act 1980 (as amended);
"1990 Act"	means the Town and Country Planning Act 1990 (as amended);
"2007 Agreement"	means the agreement made pursuant to Section 106 of the 1990 Act dated 28 August 2007 between the Council (1) and Peel Investments (North) Limited (2)
"2009 Agreement"	means the agreement made pursuant to Section 106 of the 1990 Act dated 27 March 2009 between the Council (1) and Peel Investments (North) Limited (2)
"2012 Agreement"	means the agreement made pursuant to Section 106 of the 1990 Act dated 19 November 2012 between the Council (1) and Peel Investments (North) Limited (2)
"2017 Agreement"	means the agreement made pursuant to Section 106 of the 1990 Act dated 24 February 2017 between the Council (1) and Peel Investments (North) Limited (2) and Lloyds Bank Plc (3) as varied by the 2018 Agreement
"2018 Agreement"	means the agreement made pursuant to Section 106 of the 1990 Act dated 20 December 2018 between the Council (1) and Peel Land (Intermediate) Limited (2) and Peel Investments (North) Limited (3) and Lloyds Bank Plc (4)
"Acts"	means section 111 of the Local Government Act 1972, section 33 of the Local Government (Miscellaneous Provisions) Act 1982 and section 1 of the Localism Act 2011;
"Application"	means the application for planning permission for the Development received by the Council and allocated reference number A/23/96226/MAJOR;
"BCIS Index"	means the Building Cost Information Service All in tender Price Index produced by RICS or if such index is no longer maintained, such replacement or alternative index as the Council and the First Owner may agree in writing;
"Biodiversity Net Gain"	means the system of enhancement of habitat in respect of the authorisation of new development

	pursuant to part 6 and schedule 14 of the Environment Act 2021;
"Biodiversity Off-setting Contribution"	means the sum of £199,332 (one hundred and ninety nine thousand three hundred and thirty two pounds) Index Linked to off-set the loss of habitats on the Site and to provide a net gain of 10% for the purposes of Biodiversity Net Gain and to be used by the Council or its nominee towards the establishment of new or improved habitat in accordance with the Biodiversity Off-setting Scheme.
"Biodiversity Off-setting Scheme"	means the establishment of new or improved habitat by the Council at Bedford Colliery.
"Development"	means the Development of warehousing units (Use Class B2/B8) including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/20 and 014/159/10 and associated engineering, infrastructure and landscaping works;
"First Property"	means that part of the land edged red on the Plan which is registered at the Land Registry at the date hereof under title number MAN117935
"Highway Contribution"	means the sum of £15,000 (fifteen thousand pounds) Index Linked payable to the Council towards the upgrade and revalidation of MOVA at the junction of A580/Chaddock Lane;
"Implementation"	means implementation of the Planning Permission by the carrying out of any material operation as defined in section 56(4) of the 1990 Act but excluding operations consisting of site clearance, demolition work, archaeological investigations, investigations for the purpose of assessing ground conditions, remedial work in respect of any contamination or other adverse ground conditions, diversion and laying of services, erection of any temporary means of enclosure, the temporary display of site notices or advertisements (and the expressions or phrases 'Implement', 'Implemented' and 'Implementation of the Development' shall be construed accordingly);
"Implementation Date"	means the date the Planning Permission is Implemented;
"Index Linked"	means increased (or decreased if applicable) in proportion to movements in the BCIS Index between

	the date of this Deed and the date when the particular payment is made;
"Interest"	means interest at 4 per cent above the base lending rate of Barclays Bank plc from time to time;
"Occupation"	means occupation for the purposes permitted by the Planning Permission but not including occupation by personnel engaged in construction, fitting out or decoration or occupation for marketing or display or occupation in relation to security operations during construction or as a show unit and 'Occupy' and 'Occupying' shall be construed accordingly;
"Planning Permission"	means the planning permission to be granted by the Council pursuant to the Application;
"Plan"	means the plan attached to this Deed;
"RICS"	means the Royal Institution of Chartered Surveyors;
"Second Property"	means that part of the land edged red on the Plan which is registered at the Land Registry at the date hereof under title number MAN192479
"Site"	means the First Property and the Second Property shown edged red on the Plan;
"Working Day"	means any day which is not a Saturday, a Sunday, a bank holiday or a public holiday in England.

2. CONSTRUCTION OF THIS DEED

2.1 Unless the context otherwise requires, a reference to any particular statute includes any statutory extension, modification, amendment or re-enactment of such statute and also includes any subordinate instruments, regulations or orders made in pursuance of it.

2.2 The headings appearing in this Deed are for ease of reference only and shall not affect the construction of this Deed.

2.3 References to clauses and Schedules (unless the context otherwise requires) are to the clauses and Schedules of this Deed.

2.4 Unless the context otherwise requires, words in the singular shall include the plural and in the plural shall include the singular.

2.5 Unless the context otherwise requires, a reference to one gender shall include a reference to the other genders.

2.6 A person includes a natural person, corporate or unincorporated body (whether or not having separate legal personality).

2.7 A reference to a company shall include any company, corporation or other body corporate, wherever and however incorporated or established.

2.8 A reference to any party shall include that party's personal representatives, successors and assigns and in the case of the Council the successors to its respective statutory functions.

2.9 A reference to this Deed or to any other Deed or document referred to in this Deed is a reference to this Deed or such other Deed or document as varied or novated (in each case, other than in breach of the provisions of this Deed) from time to time.

2.10 Any words following the terms including, include, in particular, for example or any similar expression shall be construed as illustrative and shall not limit the sense of the words, description, definition, phrase or term preceding those terms.

2.11 Where an obligation falls to be performed by more than one person, the obligation can be enforced against every person so bound jointly and against each of them individually.

2.12 An obligation on a party to do any act or thing includes an obligation to procure that it be done and a covenant not to do any act or thing includes a covenant not to permit or allow the doing of that act or thing.

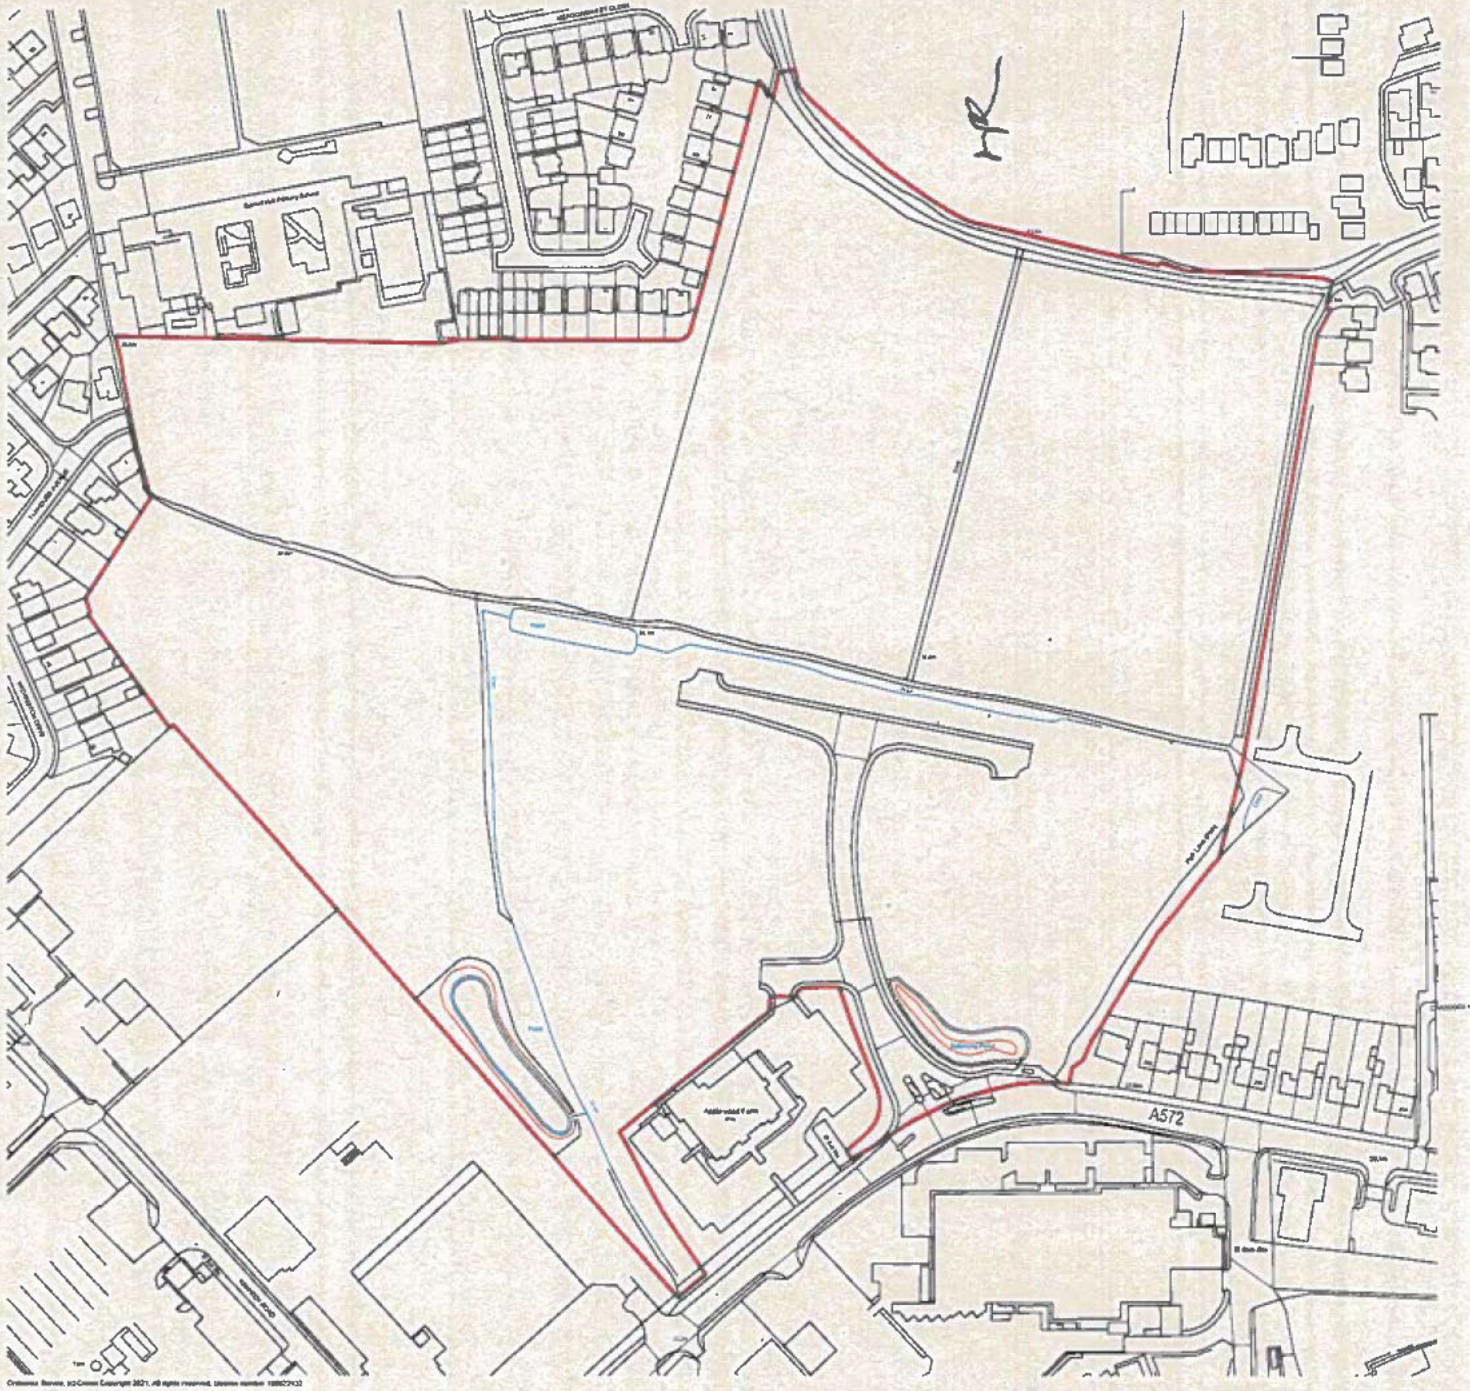
3. STATUTORY PROVISIONS

3.1 This Deed constitutes a planning obligation for the purposes of section 106 of the 1990 Act, section 111 of the Local Government Act 1972, section 1 of the Localism Act 2011 and any other enabling powers.

3.2 The covenants, restrictions and obligations contained in this Deed are planning obligations for the purposes of section 106 of the 1990 Act and are entered into by the First Owner and the Second Owner with the Council with the intention that they will bind the interests held by those persons in the Site and their respective successors and assigns as set out in this Deed.

3.3 The covenants, restrictions and obligations contained in this Deed are enforceable by the Council and in accordance with section 106 of the 1990 Act.

4. CONDITIONALITY



4.1 With the exception of clauses 5.4 and ~~10~~ 11 (which take effect immediately), this Deed is conditional upon:

(a) the issuing of the Planning Permission; and

(b) the Implementation of the Development pursuant to the Planning Permission.

5. FIRST OWNER'S COVENANTS WITH THE COUNCIL

The First Owner covenants with the Council:

5.1 to observe and perform the obligations set out in this Deed (including the Schedules hereto);

5.2 to give at least 5 Working Days written notice to the Council of the intended Implementation Date; and

5.3 to give the Council immediate written notice of any change in ownership of any of its interest in the Site occurring before all the obligations under this Deed have been discharged such notice to give details of the Transferee's full name and registered office (if a company or usual address if not) together with the area of the Site purchased by reference to a plan;

5.4 on the signing of this Deed to pay the Council's reasonable legal costs and disbursements of and incidental to the preparation and execution of this Deed in the amount of £500 (five hundred pounds).

6. SECOND OWNER'S COVENANTS WITH THE COUNCIL

6.1 The Second Owner covenants with the Council to give the Council immediate written notice of any change in ownership of any of its interest in the Site occurring before all the obligations under this Deed have been discharged such notice to give details of the Transferee's full name and registered office (if a company or usual address if not) together with the area of the Site purchased by reference to a plan;

7. COVENANTS BY THE COUNCIL

The Council covenants with the First Owner and separately the Second Owner to:

7.1 observe and perform the obligations which are to be observed and/or performed by the Council as set out in in this Deed (including the Schedules hereto);

7.2 grant the Planning Permission within 5 Working Days of completion of this Deed.

8. LIMITATION OF LIABILITY

8.1 No person shall be liable for any breach of a covenant, restriction or obligation contained in this Deed after parting with all of its interest in the Site or the part to which such breach relates, except in respect of any breach subsisting prior to parting with such interest.

9. EXCLUSIONS OF LIABILITY

9.1 No obligations contained in this Deed shall be binding upon or enforceable against any statutory undertaker in respect of any part of the Site (or interest therein) that they have acquired solely for the purpose of the supply of electricity, gas, water, drainage, telecommunication services.

9.2 This Deed shall not be enforceable against owners or occupiers of individual units constructed on the Site pursuant to the Planning Permission.

9.3 This Deed shall not be enforceable against any person whose interest in the Site is of the nature of an easement or covenant.

10. DETERMINATION OF DEED

10.1 If the Planning Permission shall expire before the Implementation of the development or shall at any time be quashed, revoked or otherwise withdrawn or (without the consent of the First Owner and the Second Owner) is modified by any statutory procedure this Deed shall forthwith determine and cease to have effect (to the extent that it has not already been complied with).

11. LOCAL LAND CHARGE

11.1 This Deed is a local land charge and shall be registered as such by the Council.

12. EFFECT OF PLANNING OBLIGATIONS

12.1 It is acknowledged that the 2012 Agreement replaced the 2007 Agreement and the 2009 Agreement and it was agreed that the planning obligations not already discharged under the 2007 Agreement and the 2009 Agreement were no longer enforceable under those agreements FOR THE AVOIDANCE OF DOUBT the 2007 Agreement and the 2009 Agreement ceased to have effect pursuant to the 2012 Agreement and shall be removed from the Register of Local Land Charges by the Council. With effect from the date of this Deed the Site shall be released from the 2012 Agreement and the 2017 Agreement (as varied by the 2018 Agreement) and the obligations therein will be treated as revoked and of no further effect in relation to the Site only FOR THE AVOIDANCE OF DOUBT the Site shall be bound by this Deed only.

12.2 [redacted]

13. REASONABLENESS

13.1 Any approval, consent, direction, authority, agreement or action to be given by the Council under this agreement shall not be unreasonably withheld or delayed.

14. CANCELLATION OF ENTRIES

14.1 Once the First Owner has discharged its obligations under this Deed the Council shall on the written request of the First Owner cancel all entries made in the local land charges register in respect of this Deed within 10 Working Days of the Council receiving such a request and issue a written confirmation of such cancellation to the First Owner and the Second Owner.

15. RESOLUTION OF DISPUTES

15.1 In the event of any dispute relating to or arising out of the terms of this Deed, the Council or the First Owner or the Second Owner may invite the other party to resolve the dispute by mediation in such manner as the parties may agree.

15.2 [redacted] Clause ~~10~~ 11.1 notwithstanding and without prejudice to the exercise by the Council of its statutory functions, in the event of a dispute relating to or arising out of the terms of this

Deed (other than a dispute relating to a matter of law or in relation to the interpretation of this Deed) the matter in dispute will on the application of either party be referred to a surveyor acting as an expert (hereinafter referred to as "**the Expert**") (being a member of the Planning Division of RICS) with not less than ten years recent experience in the field of town and country planning and development whose identity will be agreed between the parties or in default of agreement appointed by or on behalf of the President for the time being of RICS on the application of any party and:

(a) The determination of the Expert will be final and binding on the parties save in the case of manifest error;

(b) The parties will be entitled to make representation and counter-representations in accordance with such timetable as the Expert shall direct; and

(c) The Expert's costs will be borne in such proportions as he may direct failing which each party will bear its own costs of the reference and determination and one half each of the Expert's costs.

16. NO FETTER OF DISCRETION

16.1 Nothing (contained or implied) in this Deed shall fetter or restrict the Council's statutory rights, powers, discretions and responsibilities.

17. FUTURE PERMISSIONS

17.1 Nothing in this agreement shall prohibit or limit the right to develop any part of the Site in accordance with any planning permission (other than the Planning Permission or modification, variation or amendment thereof) granted after the date of the Planning Permission.

18. SECTION 73 VARIATION

18.1 In the event that the Council shall at any time hereafter grant a planning permission pursuant to an application made under Section 73 of the 1990 Act in respect of conditions attached to the Planning Permission, save and in so far as this Deed has been amended by way of a deed of variation prior to the grant of such planning permission, references in this Deed to the Application and the Planning Permission shall (save for the purposes of the definition of Planning Permission in clause 1) be deemed to include any such subsequent planning applications and planning permissions as aforesaid and this Deed shall henceforth take effect and be read and construed accordingly.

19. THE CHARGEE

19.1 The Chargee for itself and its successors in title consents to the First Owner entering into this Deed and covenants with the Council that in the event that the Chargee takes possession of the Site or any part of it and/or exercises its power of sale under the provisions of the charge then the Chargee and its successors in title will observe and perform and be bound by the terms and conditions of this Deed so far as the same remains to be observed and performed.

20. NOTICES

20.1 Any notice or other communication to be given under this Deed must be in writing and must be:

(a) delivered by hand; or

(b) sent by pre-paid first class post or by guaranteed next day delivery (via Royal Mail).

20.2 Any notice or other communication to be given under this Deed must be sent to the relevant party as follows:

(a) to the Council at Town Hall, Library Street, Wigan WN1 1YN and marked for the attention of the Assistant Director – Legal, Governance and Elections;

(b) to the First Owner at their registered office address from time to time and marked for the attention of the Legal Department;

(c) to the Second Owner at their registered office address from time to time and marked for the attention of the Legal Department;

(d) to the Chargee whose Registered Office is at 25 Gresham Street, London EC2V 7HN;

or as otherwise specified by the relevant party by notice in writing to each other party.

20.3 Any notice or other communication given in accordance with clause 20.1 ~~18.1~~ and clause 20.2 ~~18.2~~ will [redacted] be deemed to have been received:

(a) if delivered by hand, on signature of a delivery receipt or at the time the notice or document is left at the address provided that if delivery occurs before 9.00 am on a Working Day, the notice will be deemed to have been received at 9.00 am on that day, and if delivery occurs after 5.00 pm on a Working Day, or on a day which is not a Working Day, the notice will be deemed to have been received at 9.00 am on the next Working Day; or

(b) if sent by pre-paid first class post or by guaranteed next day delivery (via Royal Mail), at 9.00 am on the second Working Day after posting.

20.4 This clause does not apply to the service of any proceedings or other documents in any legal action or, where applicable, any arbitration or other method of dispute resolution.

21. INTEREST

21.1 Without prejudice to any other right remedy or power herein contained or otherwise available to the Council if any payment of any sum referred to herein shall have become due but shall remain unpaid for a period exceeding seven days the First Owner shall pay on demand to the Council Interest thereon from the date when the payment became due until payment has been made.

22. NO WAIVER

22.1 No waiver (whether express or implied) by the Council of any breach or default by the First Owner in performing or observing any of the covenants, obligations or restrictions contained in this Deed shall constitute a continuing waiver and no such waiver shall prevent the Council from enforcing any of the said covenants, obligations or restrictions, or from acting upon any subsequent breach or default in respect thereof by the First Owner.

23. THIRD PARTY RIGHTS

23.1 A person who is not a party to this Deed shall not have any rights under the Contracts (Rights of Third Parties) Act 1999 to enforce any term of this Deed. For the avoidance of doubt the successors-in-title and Assignees to the First Owner and the Second Owner and the successors to the Council's statutory functions shall have the right to enforce any of the obligations rights and covenants within this Deed.

24. GOVERNING LAW

24.1 This Deed and any dispute or claim arising out of or in connection with it or its subject matter or formation (including non-contractual disputes or claims) shall be governed by and construed in accordance with the law of England.

25. INVALIDITY

25.1 It is agreed and declared that if any clause or sub-clause of this Deed shall be deemed to be unenforceable or ultra vires the remainder shall remain in full force and effect provided severance from this Deed is possible.

This document has been executed as a Deed and is delivered and takes effect on the date stated at the beginning of it.

SCHEDULE 1 BIODIVERSITY OFFSETTING

1. COVENANTS BY THE FIRST OWNER

1.1 The First Owner covenants with the Council as follows:

(a) to pay the Biodiversity Off-setting Contribution to the Council on or before the Implementation Date;

(b) not to Implement the Development until the Biodiversity Off-setting Contribution has been paid to the Council;

(c) to notify the Council of such payment within 5 Working Days of it being made.

2. COVENANTS BY THE COUNCIL

2.1 The Council covenants with the First Owner as follows:

(a) to use the Biodiversity Off-setting Contribution towards the establishment of new or improved habitat in accordance with the Biodiversity Off-setting Scheme and for no other purpose;

(b) in the event that the Biodiversity Off-setting Contribution has not been so expended within 30 years from receipt of the Biodiversity Off-setting Contribution then the Council shall refund the unexpended part of the Biodiversity Off-setting Contribution to the person(s) who paid it together with Interest thereon for the unexpended part only (such interest to be calculated at the Base Rate from and including the date of receipt of the payment by the Council to the date of its repayment.)

SCHEDULE 2 HIGHWAY CONTRIBUTION

1. COVENANTS BY THE FIRST OWNER

1.1 The First Owner covenants with the Council as follows:

(a) to pay the Highway Contribution to the Council prior to first Occupation of the Development;

(b) not to Occupy or permit Occupation of the Development until the Highway Contribution has been paid to the Council;

(c) to notify the Council of such payment within 5 Working Days of it being made.

2. COVENANTS BY THE COUNCIL

2.1 The Council covenants with the First Owner as follows:

(a) to use the Highway Contribution towards the upgrade and revalidation of MOVA at the junction of A580/Chaddock Lane and for no other purpose;

(b) in the event that the Highway Contribution has not been so expended within 5 years from receipt of the Highway Contribution then the Council shall refund the unexpended part of the Highway Contribution to the person(s) who paid it together with Interest thereon for the unexpended part only (such interest to be calculated at the Base Rate from and including the date of receipt of the payment by the Council to the date of its repayment.)

Hi [redacted]

We have received a complaint from Cllr Eastoe on behalf of local residents in respect of the above and that its not built in accordance with the approved plans – summary below.

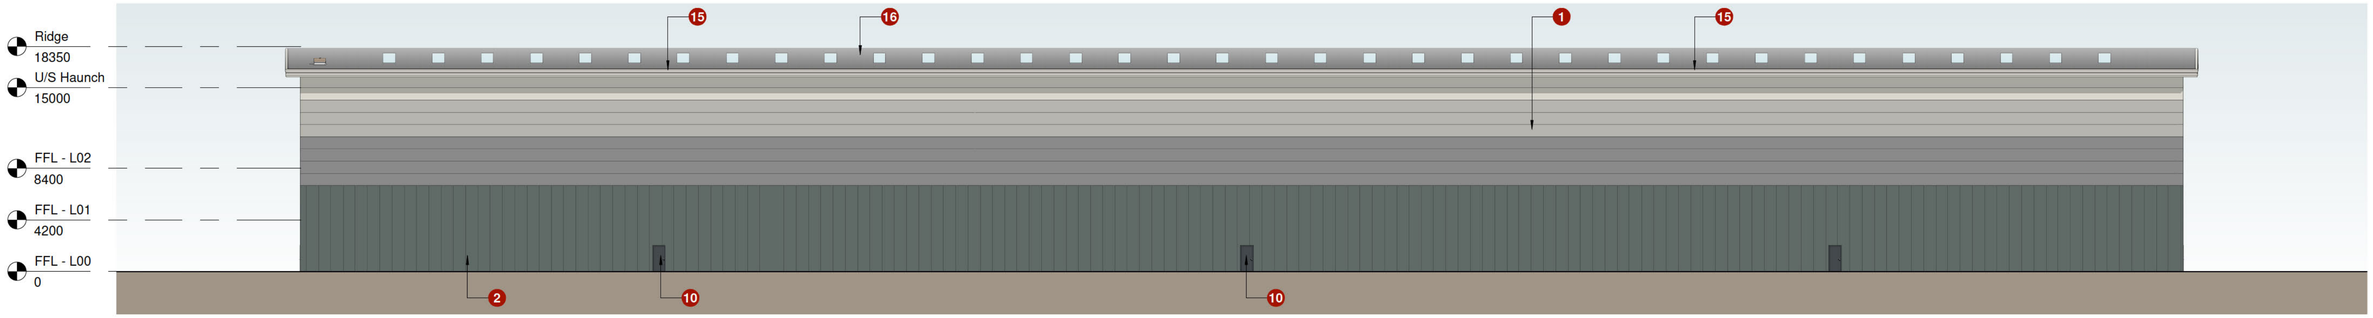
[redacted] – can you go out on site this week please and report back. We need to see whether what has been built is in accordance with the approved plans.

Therese, as it was your app, can you assist [redacted] please.

Thanks both.

[redacted]

I can't find the original plans for the business park on the planning portal.



It was agreed to well before I was a Cllr and before the boundary changes.
Residents are adamant this is a lot bigger than originally planned.
Some residents weren't aware of it when they bought their houses and now can't sell their homes because of the size of it.
People are getting in touch with us and Michael Wheelers office to say they think something is untoward with how the planning has gone about and the sheer size of the frame they have erected.
Theres rumours of the conveyancers of the new builds didn't disclose the information of the building to residents who bought the new build, especially those who moved in from out of town.

Residents are also complaining about the lack of response or lack of action from the council to the developer building this huge building.
Any advice?

[redacted]

KEY

EXISTING HEDGEROW AND TREES TO BE RETAINED AND PROTECTED

EXISTING HEDGEROW AND TREES TO BE REMOVED

SEMI-MATURE TREE
(Tree pit size: 2000x2000x1000mm)
20-25cm stem girth
5.0-5.5m height
3m clear stem
Rootballed
Species
Acer campestre
Acer x freemanii 'Autumn Blaze'
Carpinus betulus 'Lucas'
Tilia cordata 'Greenspire'

EXTRA HEAVY STANDARD TREES
(Tree pit size: 1500x1500x900mm)
18-20cm stem girth
4.5-5.0m height
1.8-2.1m clear stem
Rootballed
Species
Acer campestre 'Streetwise'
Betula pendula
Carpinus betulus 'Lucas'
Tilia cordata 'Greenspire'

EXTRA HEAVY STANDARD TREES
(Tree pit size: 1000x1000x750mm)
14-16cm girth
4.0-4.5m height
1.8-2.1m clear stem
Rootballed
Species
Acer pseudoplatanus
Acer rubrum
Alnus incana 'Aurea'
Betula pendula 'Tristis'
Carpinus betulus
Prunus avium
Sorbus aucuparia
Sorbus aria
Quercus palustris

MULTI-STEM TREES
(Tree pit size: 1000x1000x750mm)
3.0-3.5m height
3x transplanted
Rootballed
Species
Acer griseum
Betula nigra
Betula albosinensis
Cercis siliquastrum
Cornus controversa

CONIFEROUS TREES
(Tree pit size: 1000x1000x750mm)
2.0-2.5m height
4x transplanted
Rootballed
Species
Pinus nigra
Pinus sylvestris

FEATHERED TREES
1.75-2.0m height
2x transplanted
Well furnished with lateral shoots to base
Root wrapped
Species
Alnus glutinosa
Betula pubescens
Sorbus aucuparia

SPECIMEN SHRUBS
(300mm depth of topsoil)

WOODLAND MIX PLANTING
(300mm depth of topsoil + minimum 600mm depth subsoil)
Where woodland or thicket is planted next to a hard surface/kerb/fence, it should be positioned 1m from the edge.Feathered trees planted in single species groups of 3-5 at 3m apart and 3m from extra heavy standard trees. Whip/Transplants to be planted in groups of 3-9 of the same species on a 1.5m grid.

Feathered Trees - Well furnished with lateral roots to the base

%	Species	Common Name	Size	Age	Root
	Acer campestre	Field Maple	1750-2000mm	2x Transplanted	OG
	Betula pendula	Silver Birch	1750-2000mm	2x Transplanted	OG
	Prunus avium	Wild Cherry	1750-2000mm	2x Transplanted	OG
	Quercus robur	Common Oak	1750-2000mm	2x Transplanted	OG

Whip/Transplants

%	Species	Common Name	Size	Age	Root/Pot Size
	Cornus sanguinea	Dogwood	600-800mm	1+1	OG
	Corylus avellana	Hazel	600-800mm	1+2	OG
	Crataegus monogyna	Hawthorn	600-800mm	1+1	OG
	Ilex aquifolium	Holly	400-600mm		3L
	Ligustrum vulgare	Privet	600-800mm	0/2	OG
	Prunus spinosa	Blackthorn	600-800mm	1+1	OG

THICKET (WOODLAND EDGE) MIX PLANTING
(300mm depth of topsoil + minimum 600mm depth subsoil)
Where woodland or thicket is planted next to a hard surface/kerb/fence, it should be positioned 1m from the edge. Whips/Transplants planted in groups of 3-9 of the same species on a 1.0m grid.

Whip/Transplants

%	Species	Common Name	Size	Age	Root/Pot Size
	Cornus sanguinea	Dogwood	600-800mm	1+1	OG
	Corylus avellana	Hazel	600-800mm	1+2	OG
	Crataegus monogyna	Hawthorn	600-800mm	1+1	OG
	Euonymus europaeus	Spindle	600-800mm	1+2	OG
	Ilex aquifolium	Holly	400-600mm		3L
	Ligustrum vulgare	Privet	600-800mm	0/2	OG
	Prunus spinosa	Blackthorn	600-800mm	1+1	OG
	Rosa canina	Dog Rose	600-800mm	1+1	OG
	Sambucus nigra	Elder	600-800mm	1+1	OG
	Viburnum opulus	Guelder Rose	600-800mm	1+2	OG

MIXED SPECIES NATIVE HEDGEROW
(300mm depth of topsoil + minimum 600mm depth subsoil)
Planted at 450mm centres in a double staggered row. Rows to be 500mm apart.

%	Species	Common Name	Size	Age	Root/Pot
	Acer campestre	Field Maple	600-800mm	1+1	OG
	Carpinus betulus	Hornbeam	600-800mm	1+1	OG
	Cornus sanguinea	Dogwood	600-800mm	1+1	OG
	Corylus avellana	Hazel	600-800mm	1+2	OG
	Crataegus monogyna	Hawthorn	600-800mm	1+1	OG
	Ilex aquifolium	Holly	400-600mm		3L
	Ligustrum vulgare	Privet	600-800mm	0/2	OG
	Prunus spinosa	Blackthorn	600-800mm	1+1	OG
	Rosa canina	Dog Rose	600-800mm	1+1	OG
	Viburnum opulus	Guelder Rose	600-800mm	1+2	OG

ORNAMENTAL HEDGEROW
(300mm depth of topsoil + minimum 600mm depth subsoil)
Planted at 450mm centres in a double staggered row. Rows to be 500mm apart.

%	Species	Size	Pot	
100%	Carpinus betulus	1000-1250mm	1m	Trough

TALL ORNAMENTAL SHRUB PLANTING
(300mm depth of topsoil + minimum 300mm depth subsoil)
Ultimate plant height is above 1m.

LOW ORNAMENTAL SHRUB/HERBACEOUS PLANTING
(300mm depth of topsoil + minimum 300mm depth subsoil)
Ultimate plant height is below 1m.

GRASS SEEDED AREAS
(150mm depth of topsoil + minimum 150mm depth subsoil)
To be sown with Emorgsate Flowering Lawn Mixture - EL1 or similar approved. To be sown at a rate of 4g/m²

PROPOSED TRANSLOCATED GRASSLAND
To be carried out in accordance with ecologists recommendations & methodologies.

SPECIES RICH GRASSLAND AREAS
(Cultivated subsoil to a depth of 300mm)
To be sown with Emorgsate EM2 Seed mix or similar approved.
Sown at a rate of 4g/m²

DAMP TOLERANT GRASS AREAS
(Cultivated subsoil to a depth of 300mm)
To be sown with Emorgsate EM8 Pond edge mix or similar approved.
Sown at a rate of 4 g/m²

CONTOURS
Refer to BE DESIGN 'Proposed Levels Plan'
(Drawing no: WIGAN BED ST 00 DR S 0900)

EXISTING LANDSCAPING TO BE RETAINED AS PART OF THE PROPOSALS
Existing landscape to be protected and made good where required.

GRAVEL MARGIN
Gravel margins to be located between service yard kerb & security fencing.

SECTION LINES
Refer to BCA drawing 2266-22-07 'Landscape Cross Sections' for detail.

SECURITY FENCING
Refer to PHP drawing:

Subject: A/23/96226/MAJOR - due 16 August

Hi

This was a major that went to committee in June. A copy of the Section 106 is attached, and on civica and needs to be redacted please.

The decision is due on 16 August, but if it can go before then that would be great.

Thanks

Subject: RE: A/23/96226/MAJOR - Enforcement Site Visit Required this week

Hi [redacted]

Yes, that is correct. The biggest units are the 18.3m ones and I suspect they are the ones which have been erected.

If I can get the laser tool and be shown how to use it, I will pop out to site to take some measurements and ask the question about ground levels.

Thank you

Subject: RE: A/23/96226/MAJOR - Enforcement Site Visit Required this week

Hi [redacted]

Two of the units are 18.3m in height (units 1 and 2) and two are 13.7m (units 3 and 4) so I suppose it depends on which frame has gone up.

It would be good to get a measurement on site and to see if they have done any work to raise to the ground level.

[redacted] does the team have access to a laser measuring tool?

Thanks

Subject: RE: A/23/96226/MAJOR - Enforcement Site Visit Required this week

Hi [redacted]

I've already looked into this one and it seems like the complainant has referred to the Design and Access Statement (which apparently states that the height was limited to 13m) rather than the approved plans showing the height to be 18.35m, which are attached in the email response I sent to him.

I am happy to go out on site but not sure how I'd take the height measurement...

Thank you

Subject: A/23/96226/MAJOR - Enforcement Site Visit Required this week

Hi [redacted]

We have received a complaint from Cllr Eastoe on behalf of local residents in respect of the above and that its not built in accordance with the approved plans – summary below.

[redacted] – can you go out on site this week please and report back. We need to see whether what has been built is in accordance with the approved plans.

Therese, as it was your app, can you assist [redacted] please.

Thanks both.

[redacted]

I can't find the original plans for the business park on the planning portal.

It was agreed to well before I was a Cllr and before the boundary changes.
Residents are adamant this is a lot bigger than originally planned.
Some residents weren't aware of it when they bought their houses and now can't sell their homes because of the size of it.
People are getting in touch with us and Michael Wheelers office to say they think something is untoward with how the planning has gone about and the sheer size of the frame they have erected.
Theres rumours of the conveyancers of the new builds didn't disclose the information of the building to residents who bought the new build, especially those who moved in from out of town.

Residents are also complaining about the lack of response or lack of action from the council to the developer building this huge building.
Any advice?

Subject: FW: A/23/96226/MAJOR - Extension of time

Hi [redacted]

As this may come up in the next couple of weeks, I just wondered how you would like me to leave it.

This app went to Planning Committee in June, but the legal agreement has taken some time to finalise. It looks like [redacted] may be able to seal it next week or the week after, but he is still awaiting some documentation so its hard to know for sure.

The agents want to know who they can contact in my absence if we're in a position to issue the decision? I don't really want to say no one (I would have said [redacted] as he

knows all about this!) but do you want me to say that or can I give them your email address, or JD's or [redacted]?

Uniform is up to date re conditions and informatives and there is an EOT agreed until Wed 14th Aug so it would just be someone putting an X in uniform and advising [redacted] team the decision is good to go once [redacted] has confirmed the legal agreement has been finalised.

[redacted] is one of the agent but he is also going on leave on Friday; any emails over the next couple of weeks will come from [redacted].

Thanks

Hi [redacted]

Thanks for your response.

I was copied into an email from your client's solicitor on Monday to confirm that she is awaiting receipt of some signed documentation which will need to be posted on to the Council's solicitor so it looks like there will be another short delay.

I go on leave on Friday for a couple of weeks too, but I will update the record with the agreed EOT.

Regards

Good morning [redacted]

Many thanks for your email and update.

We understand that the S106 will be completed this week and therefore agree to an extension of time until Wednesday 14 August however, should you be able to issue the decision notice earlier than this date it would be appreciated.

Just fyi – I'm heading off on annual leave from close on Friday but [redacted] returns on Tuesday to pick up the baton.

Kind regards

Hi [redacted]

I hope you are well and thanks for your help on the condition 5 matter to date.

Just picking up on your response to [redacted] below I thought it was worth myself providing a observation on the matter as unfortunately unless we can achieve flexibility on the Councils proposed wording for condition 5 (as suggested in [redacted] email below dated 10th July) which in our opinion achieves the same outcome the Council require we have a material viability issue with the project as we will effectively have a 4-6 month timing implication on the construction programme with associated cost and delay which unfortunately means we would need to return to investors for approval as this could be a material variance to the currently approved construction budget and programme (we currently have a fixed price and programme offer from a Contractor) this investor approval may not be forthcoming meaning the scheme does not happen.

We are also at early-stage discussions with a potential occupier of the larger unit and again this delay would mean we could not meet their occupational timescales so potentially we would lose this opportunity.

We found our last call productive so given the significance of the issue we face here I was hoping we could again convene to discuss this and hopefully make some progress.

We would be available any time on Monday up until 3 pm on TEAMS if this would work for you and colleagues?

Thanks,

[redacted]

Subject: RE: A/23/96226/MAJOR - Land Condition

Hi [redacted]

Thanks for your email.

Myself and [redacted] do not consider there to be any other possible amendments to the agreed wording of the condition which could fall under a non-material amendment. I have therefore asked [redacted] for advice on what next steps he wants us to take and once he has come back to me, I will let you know.

I imagine the developer is gathering the information needed for clause 1 of the condition at the present time. Please submit any results from that work for [redacted] to consider but in the absence of that information, as I said, I don't see any other acceptable non-material amendments to the agreed condition.

I will come back to you with [redacted] direction as soon as possible.

Regards

Hi [redacted]

Hope you are well.

I'm just following up on [redacted] email below to check if you've had chance to review the issues raised, and also if you have found a space in diaries for the quick TEAMS call James suggested.

This one issue is starting to impact significantly on our construction programme, so we are very keen to bottom things out as speedily as possible. With this in mind if you could come back to me with your availability, I'll ensure we can work around it at this side.

Look forward to hearing from you.

Many thanks

Subject: RE: A/23/96226/MAJOR - Land Condition

Hi [redacted]

Thanks again for your response and continued efforts to help resolve our concerns and to reach an agreeable position regarding condition 5.

I've reviewed your latest response below with the team and whilst it reassuring that you advise that clauses 2 and 3 would not prevent site enabling works being carried out following the satisfaction of clause 1 (which I assume you mean to be the provision of an updated ground gas risk assessment, we still have concerns which are rooted in the sequencing of works required in the lead in to the updated ground gas risk assessment – concerns that I've set out in previous emails.

In any case, I'm also not sure the currently proposed condition 5 wording is clear in that site enabling works could be commenced after clause 1 as there is no reference to site enabling works being excluded and the preceding text refers to "*following demolition*" (which there isn't any required on site) and then "*prior to any further development commencing…"* but the first part of the condition also refers to the submission/approval of a Remediation Strategy prior to commencement of any development. So, there is no part of the condition that clearly refers to when site enabling works can commence, which if it proved to be a workable comprise for us (which I'm not sure it is) would to have some additional/amended wording shoe-horned in as part of an amended condition for clarity/precision.

I appreciate this is becoming a laboured matter and really do appreciate the Council's willingness to resolve and be flexible where possible. If the Council is amenable, please could we arrange a further short Teams meeting to try and set out our concerns and discuss a potential compromise that works for all parties as I think the concerns on both sides are being missed in the email back and forth. We shouldn't need any more than 15-20 minutes and I think it will allow us to all reach a definitive conclusion on the matter one way or another.

If you could please advise of your and [redacted] availability over the next week or so we can get coordinate the necessary team members from our side to suit your diaries.

I'm on leave myself the next two weeks but my colleagues [redacted], both cc'd, are on hand to progress this matter in my absence.

Kind regards

[redacted]

To: [redacted]
Cc: [redacted]
Subject: RE: A/23/96226/MAJOR - Land Condition

Hi [redacted]

Thanks for your email.

I can confirm that the content has been considered by our EP colleagues and concern remains about shifting clause 2 and 3 to pre-occupation for the reasons discussed at our last meeting and doing so could not be considered a non-material amendment to the development as approved.

However, as [redacted] has previously advised, clause 2 and 3 does not prevent works up to the build phase commencing; so enabling works such as roads, drainage, site levelling etc can be commenced following

the submission of the details required under clause 1 (and subject to the requirements of the other agreed pre-commencement conditions). Furthermore, the information required by clause 1 could be obtained now, submitted and, depending on the result, provide the justification to amend clause 2 and 3 later down the line.

The importance of clause 1 also needs to be stressed, as additional considerations relating to the potential gas risk following the proposed grouting works affecting both on-site and off-site needs to be explored, as well as the combustion assessment. These assessments required through clause 1 may indicate significant considerations or proposals that will inform the requirements of clauses 2 and 3.

As previously advised, the decision notice for the development will include the condition as agreed prior to the application going before Members (once the legal agreement has been finalised). Hopefully the above will provide your client with the time needed to obtain the information needed to comply with clause 1 and potentially further consider clause 2 and 3 and/or the comfort that the proposed wording does not prevent enabling works taking place as outlined above following compliance with clause 1.

Subject: RE: A/23/96226/MAJOR - Land Condition

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi [redacted]

Thank you for your response below following our meeting last month and apologies for the delay in responding to your email below of 25th June - I've been stuck at a seemingly never ending planning inquiry but I have now managed to review your email below and suggested alternative condition 5 wording with the team.

As I expressed following our meeting last month we are grateful for the Council's willingness to work with us to find agreeable amendments to the condition 5 wording and to show flexibility in the approach in which we formalise such amendments (i.e. as a Non-Material Amendment). To that end we are grateful for you and colleagues taking time to discuss the matter further and to provide suggested alternative condition wording.

However, having reviewed with the team, unfortunately the alternative amendments suggested in your email would not materially change the issue of the trigger point and sequence of events required to satisfy the condition and would still cause significant issues to the build programme, for the reasons summarised below:

- The sequencing of the required works means that ground gas monitoring can only take place following completion of on-site pressure grouting.
- As such, the amended condition 5, clause 1 and retained clauses 2 and 3 as pre-commencement elements do not really change anything in that on-site pressure grouting would need to take place, after which an updated ground gas risk assessment and combustion assessment can be undertaken and submitted to the Council for discharge following completion, which as identified in my email attached could potentially mean a lead-in time of 6 months before construction can commence.
- As clause 1 requires all the above prior to development commencing, the significant programme constraint remains.

As such, whilst we can agree to the revision to clause 1 suggested in your email, it is critical that clauses 2 and 3 drop down to beneath the 'pre-occupation' line to alleviate this significant programme constraint and the condition wording you've provided below instead reads as follows:

"No development approved by this planning permission shall commence until a remediation strategy to deal with the risks associated with contamination of the site in respect of the development hereby permitted, has been submitted to, and approved in writing by, the local planning authority. This strategy will include the following components:

Post demolition but prior to any further development commencing:

1. An updated ground gas risk assessment (considering on-site pressure grouting works and the subsequent ground gas risk), and a combustion assessment, identifying the risk to all receptors that may be affected, including those off-site.

Prior to the occupation of the development:

2. The results of the updated site investigation and the detailed risk assessment referred to in (1) and, based on these, an options appraisal and an updated remediation strategy giving full details of the remediation measures required, including a Gas Protection Design Report if gas protection measures are required, and how they are to be undertaken.

3. A verification plan providing details of the data that will be collected in order to demonstrate that the works set out in the remediation strategy in (2) are complete and identifying any requirements for longer-term monitoring of pollutant linkages, maintenance and arrangements for contingency action.

4. Prior to any part of the permitted development being occupied a verification report demonstrating the completion of works set out in the approved remediation strategy and the effectiveness of the remediation shall be submitted to, and approved in writing, by the local planning authority. The report shall include results of sampling and monitoring carried out in accordance with the approved verification plan to demonstrate that the site remediation criteria have been met.

Any changes to these components require the written consent of the local planning authority. The scheme shall be implemented as approved."

I note also your reference to the risks on the developer side: "*as the recently proposed condition wording of 'prior to occupation' does not ensure that the appropriate gas protection measures will be incorporated into the design of building foundations prior to being installed. This prevents the development from progressing beyond a stage*

where changes become difficult and costly to amend." – whilst we appreciate your concerns, I must be clear that the developer is willing to take on this risk as any such risk would either fall with the developer or contractor and be their responsibility and cost to deal with and is not a matter that the Council should be concerned about nor would it prevent the Council enforcing the condition wording above. Fundamentally, the condition is focused on the risks to future occupiers of the development / site and not on the developer during the construction phase.

With the above in mind, please can you re-consider the amendments to the condition wording and confirm whether you can agree to the revised wording I've suggested above? If concerns remain or the above explanation is not clear, then it will be important for all parties that attended the Teams meeting last month to jump on another meeting ASAP so that we can resolve this matter.

I trust that you can understand our position and the significant issue we have currently and that an agreeable way forward can be reached.

Kind regards

[redacted]

From: [redacted]
Sent: Tuesday, June 25, 2024 5:08 PM
To: [redacted]
Subject: FW: A/23/96226/MAJOR - Land Condition

Hi [redacted]

Further to my email yesterday, we have held some internal discussions and have made some amendments to the condition – see attached.

The reasoning behind the suggested amendment is as follows:

Initially, we would require the submission of a new ground gas risk assessment and refined conceptual site model, including a detailed lines of evidence approach and more justification when considering appropriate standards and guidance as to the final risk from ground gases following the proposed grouting work.

If this revised assessment determines that post grouting gas monitoring is required, then a proposal will need to be submitted. On the other hand, if it is deemed that no further monitoring is required and the proposals & justification is agreed, then we can move forward from there.

Regarding post grouting gas monitoring (if required), we would be open to any proposals such as a more intensive monitoring regime - e.g a continuous 24/7 set up over a shorter period of time – as long as this is fully explored and presented appropriately. Similarly, any other methodology that would be considered best fit and falls within the standards and guidance could be proposed with justification and lines of evidence.

I can advise that the amended wording, as attached, would be considered a non-material amendment to the permission.

After discussion, it has been decided that these elements would need to be submitted prior to the build phase and so cannot accept your amendments in full; this is to prevent additional risk on the developer side, as the recently proposed condition wording of 'prior to occupation' does not ensure that the appropriate gas protection measures will be incorporated into the design of building foundations prior to being installed. This prevents the development from progressing beyond a stage where changes become difficult and costly to amend.

We hope the attached wording offers a reasonable and workable compromise for your client.

Regards

Dear Cllr Eastoe

Thanks for the email, I've copied in David Proctor, as his team can review the situation as part of the planning enforcement powers (if this hasn't already been done) to check whether what is being built confirms to the planning permission.

In terms of conveyancing advice, and potentially being incorrect, this is something the relevant owners would need to seek independent legal advice on, particularly if they think they have been misled.

Many thanks

1 INTRODUCTION

1.1 BACKGROUND

1.1.1 This report provides an ecological assessment of the proposals to carry out development of a site adjacent to Astley Business Park in Astley, near Wigan in Greater Manchester (hereby referred to as "the site"). The assessment follows a guidance from CIEEM (2018[1]) and complies with recommendations in BS4202[2] and BS8683[3].

Site details

1.1.2 The Site (12.6 ha) is at the address Astley Park Way, Parr Bridge, Wigan, Greater Manchester, England, M28 1FJ, with a central grid reference SD 70827 01215. The wider area comprises of urban development with Bolton to the north, Wigan to the West, agricultural land to the south and Manchester to the east. The Site is bounded to the south by Chaddock Lane and Applewood Farm, a school to the north and residential properties from the east and west (see Figure 1).

1.2 PROPOSALS

1.2.1 The proposals are for the development of up to 32,825 sqm (353,343 sq ft) B2/B8 floorspace (including ancillary integral office space (Use Class E(g)) with associated car parking and service yard; new internal access road; diversion of existing Public Rights of Way; and, associated engineering, infrastructure and landscaping. A proposals layout is in Figure 2 and the landscape scheme in Figure 3 and Figure 4.

1.3 REGULATORY FRAMEWORK

Legislation

1.3.1 This report has been prepared taking relevant statutory instruments into account; including domestic legislation such as Acts of Parliament, and Regulations to comply with European Directives. This is described in full in 6.1, and in summary as follows:

- The Environment Act 2021
- The Conservation of Habitats and Species Regulations 2017 (as amended)
- Wildlife and Countryside Act 1981 (as amended)
- Protection of Badgers Act 1992
- Countryside and Rights of Way (CRoW) Act 2000
- Natural Environment and Rural Communities (NERC) Act 2006
- ODPM Circular 06/2005 Biodiversity and Geological conservation (withdrawn March 2014, but report remains compliant)

Priority Species

1.3.2 As well as species and habitats formerly protected through statute, this assessment will consider 'Habitats and Species of Principal Importance', otherwise referred to as 'Priority Habitats and Species', if present. In accordance with obligations set out in Section 40 of the NERC Act 2006, the planning authority refers to these habitats and species as material considerations, which are defined in a List through Section 41 of the Act.

National Planning Policy Framework (NPPF)

1.3.3 National policy for nature conservation is determined through the NPPF 2012[4] (updated 2021) and with respect to wildlife supersedes Planning Policy Statement 9 (PPS 9). The tools for species protection are still fully present since NPPF policy does not alter statutory legal requirements.

[4] **Ministry of Housing, Communities & Local Government 2012** National Planning Policy Framework (updated July 2021 edition). London. ISBN 978-1-5286-1033-9

Habitats and biodiversity

1.3.4 These are provided for in paras 174 – 182. In particular:

- Protection and enhancement of biodiversity (para 179)
- Local Planning Authority principles (para 180)
- Site protection (para 181)

Biodiversity Net Gain

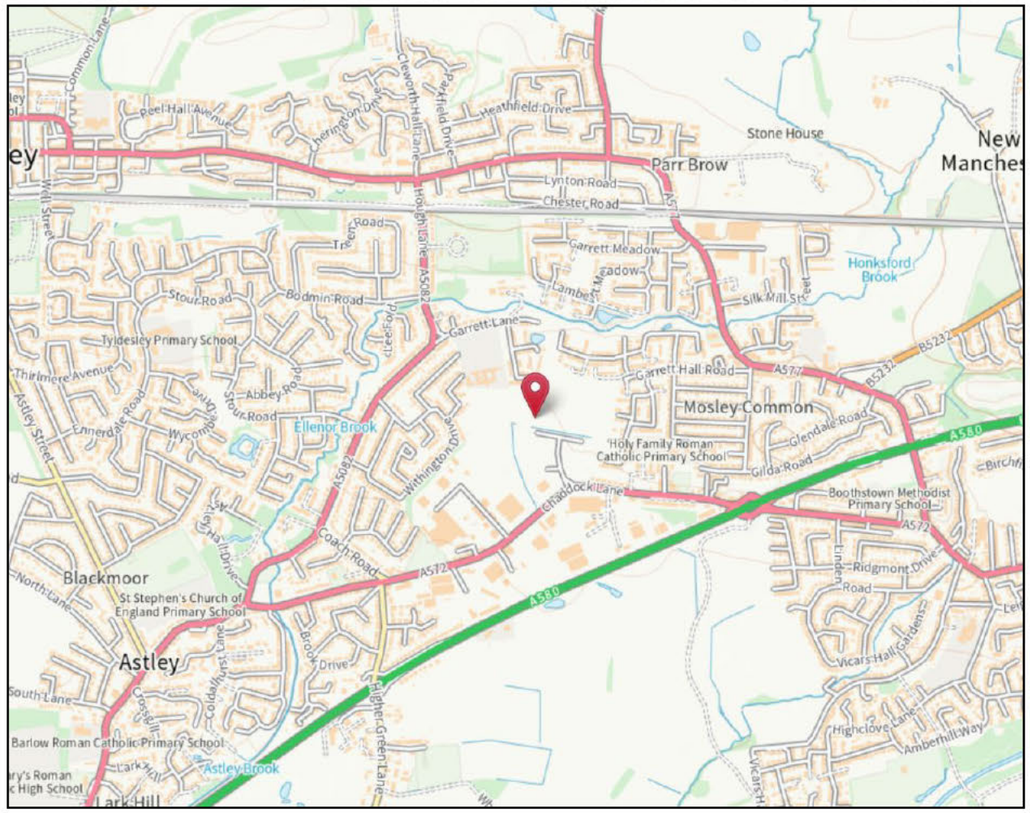
1.3.5 Within Part 6: Nature and Biodiversity of the Environment Act 2021, section 98, entitled "Biodiversity gain as condition of planning permission" states that "Schedule 14 makes provision for biodiversity gain to be a condition of planning permission in England"'. Part 1 of Schedule 14 contains the requirement for biodiversity net gain, as detailed below.

Biodiversity gain objective

1.3.6 The principles of Net Gain are enshrined in the NPPF para 179 (b), "…*identify and pursue opportunities for securing measurable net gains for biodiversity*." The biodiversity gain objective is met in relation to development for which planning permission is granted if the biodiversity value attributable to the development exceeds the pre-development biodiversity value of the onsite habitat by at least the relevant percentage that is specified in local planning policy[5]. DEFRA has produced a Metric tool to measure the biodiversity losses and gains that result from development projects, updated in 2023 to v4.0 (Natural England 2023[6]). Local requirements are discussed in 3.4.

UK Biodiversity Policy

1.3.7 There is a 'Biodiversity Duty' for local authorities set out in the NERC Act 2006 Sections 40 and 41, guiding national policy for priority habitats and species



[5] The Environment Act was passed in 2021 and it requires a 10% net gain from new development, but only once the Sec of State issues secondary legislation to implement that part of the Act.

[6] **Natural England 2023**. Biodiversity metric 4.0: Auditing and accounting for biodiversity – User Guide. Natural England Joint Publication JP039. ISBN: 978-1-7393362-1-9. First published March 2023.

(i.e., the S41 List), and importantly linking these to both the National Biodiversity Action Plan for the UK and local Biodiversity Action Plans (BAPs).

1.3.8 The UK BAP describes the UK's biological resources and commits a detailed plan for the protection of these resources. Although not statutorily binding, nonetheless it provides policy direction at a national, regional and local scale. It currently has 391 Species Action Plans, 45 Habitat Action Plans and 162 Local Biodiversity Action Plans with targeted actions. This list, a result of the most comprehensive analysis ever undertaken in the UK, contains 1149 species and 65 habitats that have been listed as priorities for conservation action.

2 METHODS

2.1 DESKTOP

2.1.1 A desk study was carried out by The Environment Partnership (TEP 2021)[7] in 2021 collecting records from the Greater Manchester Ecology Unit (GMEU) and the results are summarised here. The Area of Search (AoS) was within 2km of the Site. The GMEU also provided records for non-statutory sites (Sites of Importance for Nature Conservation [SINCS]).

2.1.2 The Department of the Environment and Rural Affairs (DEFRA) Map and Geographic Information Centre (MAGIC) website[8] was searched for information on:

- Statutory designated wildlife sites of international importance within 10km of the Site
- Statutory designated wildlife sites of national importance within 5km of the Site
- Statutory designated wildlife sites of local importance within 2km
- Relevant European Protected Species licensing data in a 2km AoS
- Distribution of Priority Habitats in a 2km AoS

2.1.3 Planning policies with respect to the Biodiversity of the Site have been reviewed so that recommendations comply.

2.2 FIELDWORK

Phase I Habitat Survey

2.2.1 An initial site visit was carried out by The Environment Partnership on 29th June 2021. The Ecology Practice verified and expanded upon the Phase I survey on the 1st June 2022. The 2022 survey was carried out by Mark Morgan BSc, MCIEEM, an experienced botanist and Senior Ecologist. The survey involved identifying and mapping the dominant habitat types following the

[7] **The Environment Partnership 2021** Preliminary Ecological Assessment. Report Ref: 8908.002. August 2021. Consultant report to PLP Investments (North) Ltd.
[8] https://magic.defra.gov.uk/ (website accessed 03/07/23)

Phase I habitat survey methodology recommended by Natural England (JNCC 2010[9]). Dominant plant species were noted (including aliens), as were any uncommon species or species indicative of habitat types, but not all species would have been visible and there was no attempt to compile exhaustive species lists.

2.2.2 During this field survey, attention was paid to habitats and features that may provide opportunities for protected species to be present at other times of year and thus inform the recommendations for further survey where appropriate. For example, the survey included at least 30m from the boundary to ensure badgers will not be affected, employing method as set by Cresswell et al 1990[10].

Invasive plants

2.2.3 On the 9th June 2022 an invasive species survey was carried out as a result of the findings of the Phase I survey. This survey specifically looked at the distribution of giant hogweed, although other species were recorded if present.

Bats

2.2.4 A Ground Level Tree Survey (GLTA) was carried out in 2021 and reported in TEP 2021[7]. This was verified by field investigation in 2022 by licensed bat worker [redacted], following guidance provided by Collins 2016[11].

2.2.5 Bat activity was investigated by use of transects as defined in the guidance provided by Collins 2016[11].

2.2.6 Following the GLTA, trees were climbed using appropriate methods to access and inspect PRFs using a torch and endoscope, according to Andrews 2018[12] as follows:

[9] **Joint Nature Conservation Committee 2010** Handbook for Phase I habitat survey: a technique for environmental audit. JNCC, Peterborough.

[10] **Cresswell, P., Harris, S. and Jefferies, D.J. 1990.** The history, distribution, status and habitat requirements of the badger in Britain. NCC, Peterborough. ISBN 0-86139-651-0.

[11] **Collins, J. (ed.) (2016)** Bat Surveys for Professional Ecologists: Good Practice Guidelines. 3rd Edition. The Bat Conservation Trust, London. ISBN 13978-1-872745-96-1.

[12] **Andrews, H. 2018.** Bat Roosts in Trees: A guide to identification and assessment for tree-care and ecology Professionals, 1st Edition. Pelagic Publishing.

i Teams of surveyors were led by a Natural England Level 2 licenced surveyor with other experienced climbers, using roped access to PRFs.

ii All visits were separated by at least two weeks apart with surveys conducted during the optimal bat activity period of May to August in line with Collins 2016.

iii PRFs could also be additionally identified during this aerial survey to then also be inspected during the aerial survey

iv Each endoscope utilised had motion camera and capture capabilities to record evidence of bats.

v Each tree was surveyed according to GLTA grade. i.e.

a) High roost potential was subject to three individual roped access surveys

b) Moderate roost potential was subject to two individual roped access surveys

c) Low roost potential did not require an endoscope survey and was only required to be soft felled in accordance with Collins 2016.

2.2.7 The aerial technique above is a non-standard method. The method is pragmatic and brings a number of strengths to the data that nocturnal surveys are limited to, particularly in sites with a deep canopy that would limit visibility:

i Nocturnal surveys specified by Collins 2016 are weak in identifying field signs within the features as they cannot be identified during a nocturnal survey.

ii Often nocturnal surveys of trees are limited as a result of tree canopy and clutter leading to low incidence of recording bats and / or specific roost site location during low light conditions.

iii The nocturnal survey method is limited to identification of the species exiting the roost, since if there are other bats flying or a bat leaves/returns to the feature without calling it is likely that it will not be identified.

iv The survey method of nocturnal surveys is also labour intensive in terms of survey particularly with the number of trees on large sites.

v Other strengths of this type of survey include confidence in a negative result for the series of visits to that tree thereby demonstrating where the colony "is not" as well as where "it is".

vi This method also identifies presence of competitors as well as unsuitable features that can be downgraded due to the close inspection.

2.2.8 If aerial surveys were not possible due to limited access to the feature or health and safety issues with climbing the tree, a nocturnal survey was undertaken using the methods as identified by Collins 2016.

Breeding birds

2.2.9 The Site was visited during early May and a second time in early June to make an assessment of breeding birds across the Site, following guidance provided in Gilbert et al 2011[13].

Great Crested Newt

2.2.10 An eDNA survey was carried out in 2021, reported by TEP 2021[7]. Conditions were verified in 2022 during all survey visits. As District Level Licensing was elected as the method of mitigating impacts to GCN, no further survey was necessary (Biggs et al 2014[14]).

Others

2.2.11 Reptiles, otters and water vole were discounted by the 2021 preliminary ecological appraisal as reported in TEP 2021[7]. The various surveys in 2022 confirmed that conditions had not changed, and the habitats continue to be unsuitable to support populations of these species.

[13] **Gilbert, G., Gibbons, D. W. and Evans, J. 2011** Bird Monitoring Methods: a manual of techniques for key UK species. RSPB, Sandy, Bedfordshire, ISBN 13 978-1-907807-22-0.

[14] **Biggs J, Ewald N, Valentini A, Gaboriaud C, Griffiths RA, Foster J, Wilkinson J, Arnett A, Williams P and Dunn F 2014.** Analytical and methodological development for improved surveillance of the Great Crested Newt. Appendix 5. Technical advice note for field and laboratory sampling of great crested newt (*Triturus cristatus*) environmental DNA. Freshwater Habitats Trust, Oxford.

2.3 SURVEY CONSTRAINTS

2.3.1 Other surveyors within the planning team had equipment stolen from the Site and were confronted by members of the public displaying intimidating behaviour. Therefore, the bat static detector was not set out for the second transect survey and the surveyors were accompanied by security to conduct the transects at night.

2.3.2 Further, it was agreed with the GMEU that there would be no requirement for an autumn transect when submitting for planning given the data during spring and summer, while the project was temporarily put on hold (see 6.5).

3 DESKTOP RESULTS

3.1 DESIGNATED SITES

Statutory Sites

3.1.1 There are no statutory designations within 2km of the Site. Within 5km:

i There is one internationally designated site, Manchester Mosses (Figure 5 which is a Special Area of Conservation (SAC) lying c.4km south of the Site. Manchester Mosses Conservation Objectives and Supplementary advice are available from Natural England[15]. In summary the SAC designation is to protect remnant degraded raised bogs still capable of natural regeneration and as such the SAC will not be affected.

ii The Site lies within 5km of Astley and Bedford Mosses Site of Special Scientific Interest (SSSI), which underpins the SAC designation. The SSSI features include its wintering bird assemblage. The SSSI will not be affected by the proposals.

iii There are 3 Local Nature Reserves that are at c.4km from the Site and will therefore not be affected.

iv The Site falls within a Natural England Impact Risk Zone (IRZ) for Manchester Mosses and Astley and Bedford Mosses requiring the LPA to consult NE for all planning applications.

Non-Statutory Sites

3.1.2 There are six non-statutory designated sites within 2km of the Site refer to Figure 6.

3.1.3 All sites lie beyond large urban areas from the site and will therefore not be affected.

[15] http://publications.naturalengland.org.uk/publication/5283870555504640

Table 2: Non-statutory Sites

Name	Features for Designation	Status	Distance
Damhouse Wood	Plantation woodland habitats.	SBI	0.8 km
Ponds North of Cleworth Hall	Pond habitats and their populations of amphibians and aquatic invertebrates.	SBI	1 km
Ponds near New Manchester	Woodland, grassland, and pond habitats and their populations of amphibians.	SBI	1.4 km
Marsh at Lower Green	Swamp, reed beds, open water habitats and amphibians.	SBI	1.7 km
Ponds North of Cleworth	Pond habitats and amphibians	SBI	1.7 km
Brickfield wood	Woodland habitats	SBI	1.9 km

3.2 SPECIES

3.2.1 TEP 2021 reported 557 records of protected and notable species within 2km of the Site. They provide detail, but the key points for assessment are:

i There are numerous records of pipistrelle bat adjacent to the southern Site boundary.

ii There are no records of GCN within contiguous habitat of the Site.

iii There are a number of records of red- and amber-listed breeding birds of conservation concern and priority breeding birds on and adjacent to the Site.

iv There are records of badger, but these are >1km southeast of the Site, beyond main roads.

v There are several records of hedgehog <1km from the Site, again beyond a main road.

3.2.2 A review of EPS licenses awarded up to January 2022 shows that here have been no licenses awarded on or adjacent to the Site, the nearest being a bat licence c.2.5km from the Site. The nearest GCN licence awarded is 2.9km north (refer to Figure 7).

3.3 HABITATS

3.3.1 The data search and DEFRA maps show no notable, or priority habitats are present within or adjacent to the Site. However, priority habitat was found on site during the fieldwork, as detailed in 4.1.

3.4 LOCAL PLANNING POLICY

3.4.1 The planning authority is Wigan Council, who have adopted their Local Plan Core Strategy since September 2013. There is no allocation to the Site and adjacent land for biodiversity purpose, the key policy for biodiversity is CP12 Wildlife and Habitats.

3.4.2 The Policy states:

We will help wildlife to prosper and safeguard important geological features by:

1. *Protecting our Special Area of Conservation at Manchester Mosses (and other internationally designated sites outside of the borough) and European protected species in accordance with legislation.*
2. *Protecting and enhancing our Sites of Special Scientific Interest and Species of Principal Importance in England in accordance with legislation and national planning policy as applicable.*
3. *Protecting our Sites of Biological Importance and regionally important geological sites from development that would adversely affect the integrity of a site, unless there is an overriding public interest, and encouraging active management to maintain and enhance sites.*
4. *Protecting, maintaining and promoting the active management of our Local Nature Reserves.*
5. *Protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensuring, as far as practicable, that habitats are part of linked networks and not fragmented.*

6. *Requiring reasonable provision to be made for wildlife habitats and features beneficial to geological conservation as part of new development*
7. *Taking account of the impact of climate change in the enhancement of existing and the creation of new wildlife habitats.*
8. *Enabling more people to appreciate, enjoy and learn about wildlife and geo-diversity in the borough, particularly within Greenheart."*

4 FIELDWORK

4.1 PHASE I HABITAT SURVEY (2022)

Site Summary

4.1.1 The Site (c.12.6ha) is dominated by semi-improved grassland, with neutral grassland, species-poor hedgerows, (attenuation) ponds, and scrub. It is surrounded by developed habitat/urbanisation within all directions. The most valuable ecology resource on site is the neutral grassland habitat, which contains upwards of 300 orchids among several other species. The hedgerows on site, while a valuable resource, are all species-poor and non-important (but Priority Habitat). However, the semi-improved grassland is generally of low ecological value and species-poor, dominating over 50% over the area. Historically the Site has been used for agricultural purposes to as recent as 2009 or later.

A Woodland and Scrub

A2.1 Dense scrub

4.1.2 Dense scrub is a dominant habitat feature (totalling c.1.13ha) to the southern and eastern portion of the Site (e.g., TN6), generally characterised by bramble with small shrubs (hawthorn, silver birch etc). A dense stand is present at TN6 which is comprised of alder and goat willow, among other species, below 5m in height. The dense scrub habitats are frequently interspersed with tall ruderal species.

A3.1 Scattered trees

4.1.3 A single group of scattered trees (c.0.02ha) is present on Site along the north-western boundary (TN9). The group comprises of silver birch, beech, poplar and cherry. The trees do not offer any bat roost opportunity.

B Grassland

B6 Poor semi-improved grassland

4.1.4 The Site is dominated by poor semi-improved grassland (totalling c.7.88ha) within three distinct fields to the northern and western areas. The grasslands are generally dominated by Yorkshire fog, red fescue, false oat grass, and perennial ryegrass, although rough meadow-grass, meadow foxtail grass, and soft brome are present. There is a lack of flowering plants throughout, with species typical of agricultural improvement/nutrient input present such as nettle, broadleaved dock, creeping thistle, and cleavers, among others. The sward height was tall, being rank throughout.

B2.2 Semi-improved neutral grassland

4.1.5 Towards the south-eastern portion of the Site is an area of semi-improved grassland (c.1.87ha) (TN1). This grassland is a valuable ecological resource in terms of its botanical value and is a borderline grassland between unimproved and semi-improved. Based on aerial imagery, the habitat was under agricultural management as recent as 2009 (if not more recently), and as such is unlikely to be classified as an unimproved grassland. It is likely that the topsoil was stripped at some point in recent years, producing a nutrient-poor soil which is of benefit to flowering plants. There are in excess of 300 orchids throughout the habitat, dominated by southern marsh orchid, with early marsh orchid, and hybrid *Dactylorhiza* species. There are a range of sedges, including pendulous sedge, hairy sedge, and glaucous sedge, which are often dominant alongside rushes within the habitat mosaic. Flowering plants are dense throughout, dominated by red clover, vetches, and black medick, among others. Species-richness is mixed across the area with an estimated average of 12-15 per m^2.

C Tall herb and fern

C1.1 Continuous bracken

4.1.6 A small strip (c.0.04ha) of continuous bracken is present near the northern boundary, succumbing to bramble scrub.

C3.1 Tall ruderal

4.1.7 Tall ruderal (e.g., TN10) is present throughout the Site (totalling c.0.57ha), generally along hedgerows, field edges and previously disturbed ground. Tall ruderal is dominated by nettle, willowherbs, creeping thistle, docks, common hogweed, cow parsley, among others.

G Open Water

G1 Open water (pond/attenuation)

4.1.8 The pond habitats remain as described in TEP 2021[7] and total c.0.11ha; two waterbodies are present on site (TNs 3 & 4), with one further dry feature (TN2). To the east of the new access road, a waterbody was created in 2021 (TN4). The northern, eastern, and western banks are colonised by semi-improved grassland species with an abundance of Yorkshire fog and meadow foxtail, and occasional red clover, rough meadow-grass, and rushes. The pond was holding water at the time of survey, albeit quite shallow, notably to the eastern end. Some aquatic vegetation is present within the pond, although this is limited in area.

4.1.9 The waterbody to the west of the Site was created between 2009-13 (TN3). Vegetation within the pond includes greater reedmace and pondweed covering c.30% of the pond area. The banks comprise Yorkshire fog, meadow buttercup, sedges, and marsh orchids, amongst other species (as per the neutral grassland description). Scattered willow scrub is abundant, with occasional young silver birch and oak trees of an immature age class.

J Miscellaneous

J1.2 Amenity grassland

4.1.10 A small area of amenity grassland (c.0.02ha) is present to the southern portion of the Site, adjacent to the hardstanding access. The grassland is heavily managed (mown) and limited in species diversity.

J2.2 Species-poor intact hedgerow

4.1.11 A total of seven hedgerows are present across the Site, all of which are native and species-poor. The hedgerows were subject to a Hedgerow Evaluation and Grading System (HEGS) assessment with details of all hedgerows provided in Table 5. None of the hedgerows are classed as 'important', yet they are of ecological value and are each considered a priority habitat. Their distribution throughout the Site is shown in Figure 9.

J4 Bare ground / sealed surface

4.1.12 Bare ground totals c. 0.96ha across the Site. A tarmacadam road extends into the Site from the south. A compacted crushed-stone path is present along the eastern and northern boundaries.

Habitat Conformity to Other categories

International Qualifying Features

4.1.13 N/A.

Priority Habitats

4.1.14 The hedgerows on Site are classed as priority habitat.

Others

4.1.15 All ditches continue to be dry and without wetland vegetation, not representing ditch habitat, consistent with the description in TEP 2021[7].

4.1.16 The Phase I collected evidence of other species of note, as follows:

i A stand of giant hogweed (Schedule 9, Part II, WCA) was identified at TN14, with two plants observed. A survey was carried out of the entire site separate to the Phase I on 9th June 2022, and confirmed these are the only plants present (refer to Figure 10).

ii No evidence of protected or notable species was observed during the survey, although there is suitability for priority species hedgehog to be present.

iii No signs of badger were observed on Site, although the Site remains suitable for their presence.

iv There continues to be no suitability for otters, reptiles or water voles as described in TEP 2021.

Table 3: Target notes and descriptions

TN	Description
1	Semi-improved neutral grassland of 'good' condition. In excess of 30 orchids throughout the area dominated by southern marsh orchids, with early marsh orchids and hybrids. The grassland contains an abundance of sedges and is rich in flowering plants (notably red clover). This habitat is the best ecological resource on site.
2	A depression within the grassland which has previously likely formed a shallow pond. Dry at the time of survey.
3	Well-established pond with greater reedmace and pondweed.
4	Newly created pond with low coverage of aquatic vegetation. Pond drying to the eastern extent.
5	Previously disturbed ground by machinery with bare exposed earth.
6	Dense scrub with low growing trees (below 5m), dominated by alder with much tall ruderal present, notably at the scrub edges.
7	Sycamore tree offering 'moderate' bat roost potential (2021).
8	Ash tree offering 'moderate' bat roost potential (2021).
9	Small group of trees with silver birch, polar, and cherry. Trees are located on and offsite. No bat roost potential observed within trees.
10	Dense area of tall ruderal, dominated by nettle, with creeping thistle, bracken, broadleaved dock, and Yorkshire fog.
11	c.10 southern marsh orchids at scrub edges. A small covering of common reed.
12	Oak tree offering 'moderate' bat roost potential (2021).

TN	Description
13	Sycamore tree preciously graded as 'high' downgraded to 'low' bat roost potential in 2022. A second sycamore nearby graded as 'low' in 2021.
14	Two plants of giant hogweed, a Sch 9 invasive species.

Table 4: Species list

Common name	Latin name
Yorkshire fog	*Holcus lanatus*
Meadow foxtail	*Alopecurus pratensis*
Rough meadow-grass	*Poa trivialis*
Red fescue	*Festuca rubra*
False oat grass	*Arrhenatherum eliatus*
Crested dog's-tail	*Cynosurus cristatus*
Cock's-foot grass	*Dactylis glomerata*
Sweet vernal	*Anthoxanthum odoratum*
Pendulous sedge	*Carex pendula*
Glaucous sedge	*Carex flacca*
Hairy sedge	*Carex hirta*
Sedge species	*Carex sp*
Southern marsh orchid	*Dactylorhiza praetermissa*
Early marsh orchid	*Dactlyorhiza incarnata*
Marsh orchid species	*Dactylorhiza spp*
Black medick	*Medicago lupulina*
Colt'sfoot	*Tussilago farfara*
Compact rush	*Juncus conglomerata*
Soft rush	*Juncus effusus*
Creeping bent	*Agrostis stolonifera*
Soft brome	*Bromus hordeaceus*
Common daisy	*Bellis perennis*
Creeping buttercup	*Ranunculus repens*
Dandelion	*Taraxacum officinale agg.*
Common chickweed	*Stellaria media*
White clover	*Trifolium repens*

Common name	Latin name
Red clover	*Trifolium pratense*
Bush vetch	*Vicia sepium*
Meadow buttercup	*Ranunculus acris*
Marsh thistle	*Cirsium palustre*
Common ragwort	*Jacobaea vulgaris*
Ribwort plantain	*Plantago lanceolata*
Beaked hawk'sbeard	*Crepis vesicaria*
Common sorrel	*Rumex acetosa*
Creeping cinquefoil	*Potentilla simplex*
Cuckooflower	*Cardamine pratensis*
Hairy sedge	*Carex hirta*
Creeping thistle	*Cirsium arvense*
Fleabane	*Pulicaria dysenterica*
Common nettle	*Urtica diocia*
Groundsel	*Senecio vulgaris*
Cleavers	*Galium aparine*
Broadleaved dock	*Rumex obtusifolius*
Curled dock	*Rumex crispus*
Bramble	*Rubus fruticosus agg.*
Goat willow	*Salix capraea*
Elder	*Sambucus nigra*
Hawthorn	*Crataegus monogyna*
Ash	*Fraxinus excelsior*
Silver birch	*Betula pendula*
Osier willow	*Salix viminalis*
Alder	*Alnus glutinosa*
Sycamore	*Acer pseudoplatanus*
Hazel	*Corylus avellana*
Poplar	*Populus spp.*
Cherry species	*Prunus spp*
Beech	*Fagus sylvatica*
Blackthorn	*Prunus spinosa*
English oak	*Quercus robur*
Hedge bindweed	*Calystegia sepium*

Common name	Latin name
Bittersweet	*Solanum dulcamara*
Prickly sow-thistle	*Sonchus asper*
Bugle	*Ajuga reptans*
Fox glove	*Digitalis purpurea*
Dog rose	*Rosa canina*
Giant hogweed	*Heracleum mantegazzianum*
Common hogweed	*Heracleum sphondylium*
Greater reedmace	*Typha latifolia*
Bracken	*Pteridium aquilinum*
Rosebay willowherb	*Chamaenerion angustifolium*
Pale persicaria	*Persicaria lapathifolia*
Common reed	*Phragmites australis*
Field horsetail	*Equisetum arvense*
Cow parsley	*Anthriscus sylvestris*
Herb robert	*Geranium robertianum*
Pondweed species	*Potamogeton spp.*

Table 5: Hedgerow (HR) descriptions and HEGS assessment

HR	Av. Sp / 30m	HEGS score	Important (Y/N)	HR length (m)	Notes / Species
1	3	-3 moderate	N	151	HR along northern boundary, unmanaged with semi-improved grassland to south and hardstanding path to the north. Species: hawthorn, blackthorn, holly, ash
2	1	3 moderate	N	210	Hawthorn dominant. Running north to south in the north of the Site. The hedgerow is unmanaged with semi-improved grassland to either side. Species: hawthorn, elm.
3a	3	-3 moderate	N	400	To the western extent, the HR becomes gappy and is dominated by hawthorn. To the eastern portion, the hedgerow runs partially parallel to HR3b. The hedgerow is unmanaged and mostly surrounded by semi-improved grassland habitat with a short strip of tall ruderal. Two trees of moderate bat roost potential are located within the HR. Species: Hawthorn, elder, sycamore, hazel pedunculate oak, ash.
3b	3	-3 moderate	N	164	HR running parallel to HR3a. Species: Hawthorn, elder, hazel
4	3	3 moderate	N	118	Dominated by hawthorn with other occasional woody species present, largely extending as scrub at the HR base. Species-poor grassland to west, neutral grassland to the east, of greater importance. Species: hawthorn, blackthorn, willow, sycamore, alder, ash, oak.
5	1	4 low	N	50	Species-poor HR dominated by hawthorn. HR connecting to tree group, which extends offsite to the north. Scrub and tall ruderal at base of hedgerow extending to species-poor grassland. Species: hawthorn.
6	1	4 low	N	100	HR along south-eastern boundary. Hawthorn dominant with residential and development to east and hardstanding path to west. HR contains tall ruderal at base. Species: Hawthorn, elder.
7	1	4 low	N	153	Part HR along northern boundary and dominated by hawthorn. Unmanaged with tall ruderal at the base. Residential development to the north. Species: Hawthorn, elder.

4.2 AMPHIBIANS

Great Crested Newt

4.2.1 Great crested newts were recorded in the initial data trawl within 2 km of the Site. There are three waterbodies on site and four waterbodies within a 500m of the Site as identified on Ordnance Survey mapping. Pond P2 was dry in 2021 and continued to be dry in all visits in 2022.

4.2.2 A Habitat Suitability Index assessment and eDNA survey was carried out in 2021. The results of the eDNA survey in 2021 showed one positive result from the six remaining ponds that were tested, as shown here in Table 6.

Table 6: 2021 GCN Assessment

Pond Ref	HSI Category	eDNA Survey
P1	Excellent	Absent
P2	Dry	
P3	Average	Absent
P4	Below Average	Absent
P5	Below Average	Absent
P6	Poor	Present
P7	Good	Absent

District Level Licensing (DLL)

4.2.3 The Applicant has joined the DLL scheme through Natural England. An Impact Assessment & Conservation Payment Certificate (IACPC) has been provided, based on calculations derived from Figure 11 and is provided in 6.4.

4.3 BATS

Bat Activity Survey

4.3.1 In accordance with Collins 2016[11] the habitat has been graded as low given the urbanised environment and the low connectivity to the wider area. This is consistent with TEP 2021[7].

4.3.2 Two bat activity surveys were undertaken in the form of walked transects and static detector surveys. The transect surveys were completed on 25th May 2022 and 19th September by two experienced surveyors in suitable conditions with no constraints. It was agreed with the local planning authority that the autumn survey was not required due to the low number of bats recorded during the first two surveys (see 6.5).

4.3.3 A static detector was left in situ for 7 days from the 25th May 2022, located in an area estimated to be the most suitable for bat activity (see Figure 12) Following this survey there were reports of other planning team surveyors having equipment stolen from the Site, therefore the static detector was not set out for the remaining surveys and the surveyors were accompanied by security to conduct the transects at night.

Transect surveys

4.3.4 The survey parameters are detailed in Table 7. The surveys found low evidence of bats within the Site boundary with most bats recorded in the western portion of the Site, associated with Hedgerows 3a and 4. Activity levels and the overall number of bat calls recorded (either commuting or foraging) were similar for both surveys.

4.3.5 Only common pipistrelle and soprano pipistrelle were recorded commuting across the site during the transects with common pipistrelle being the most frequently recorded. Bat activity was closely associated with hedgerows (predominantly H3a and H4) and associated trees. No recordings of bats were obtained within the eastern portion of the Site during either transects. The

transects route and bat activity are shown in more detail in Figure 12 and Figure 13.

Static detector

4.3.6 The static data logger recorded 256 passes, the species recorded again only included common and soprano pipistrelle. Common pipistrelle was recorded the most frequently making up 92.5% of the passes and soprano pipistrelle made up the remaining 7.5%. A breakdown of the calls each night is shown Table 8.

Table 7: Transect survey parameters

Parameter	Survey #1	Survey #2
Date	25/05/22	19/07/22

Ground Level Tree Assessment (2021)

4.3.7 A GLTA was carried out in 2021 reported in TEP 2021 and in 2022 it was verified that conditions had not changed. The results are shown in Table 9.

Table 9: 2021 GLTA results

Tree ID	Species	Feature	BCT Category
T1	Ash	Young to semi-mature, multi-stemmed ash with occasional ivy cover on edge of a ditch. No obvious potential roost features and ivy is unlikely to be a feature.	Negligible
T2	Oak	Semi-mature oak on edge of dry ditch. A north-facing crevice is present at 5m height between two branches while a large cavity is present on a south-facing branch at 4m height.	Moderate
T3	Sycamore	Semi-mature sycamore with cracked bark, which is lifted in places. A cavity is present on the south-facing branch at 3m height.	Moderate
T4	Ash	Young, multi-stemmed ash located to north of hedgerow with branches overhanging into the site. No obvious potential roost features.	Negligible
T5	Ash	Semi-mature multi-stemmed ash present at the end of a hedgerow. A dead branch is present at 1.5 m height facing west, with a cavity at the end but cracks at the top	Negligible

Tree ID	Species	Feature	BCT Category
		suggest this is exposed and allows rainwater in.	
T6	Sycamore	Sycamore tree in hedgerow. A crack is present on the north-west facing branch, which is obscured by foliage.	Low
T7	Sycamore	Semi-mature sycamore in hedgerow with south-facing cavity at 3 m height. A large cavity, where a branch has snapped, is present on the south side, whilst on the west side several small cavities are present along a branch.	High
T8	Oak	Mature tree on edge of area of dense scrub in the south-west of the site. A close inspection of this tree was not possible, but it is of an age and size that could support potential roost features.	Moderate (precautionary)

Bat Endoscope Survey

4.3.8 Further to the GLTA (4.3.7), those trees which were classed as having Moderate or High potential for a bat to roost in a feature on the tree, i.e., a potential roost feature (PRF), were subject to climbing during which each feature was visually inspected, using an endoscope where possible/necessary. The trees are shown on Figure 14. Each tree was assessed twice during the bat active season, at least two weeks apart (Andrews 2018[12]).

4.3.9 As shown in Table 9, no bat roosts or evidence of bats were found within any tree. T7 was downgraded from 'High' to 'Low' upon a closer inspection with the surveyor noting:

"[The] Cavity on [the] South side is 15cm deep with an entrance of 8cm diameter. Downgraded to low. All other features downgraded to negligible after close inspection."

4.3.10 The grading for all other trees remained as per 2021.

4.3.11 Collins 2016[11] states: "*Ideally, the survey data should be from the last season before a planning application is submitted*", meaning this endoscope data can be used for an application up to the end of the 2023 season.

Table 10: Endoscope Survey results

Tree ID	Species	Original Ground based assessment	Original BCT category	1st aerial check 6/5/2022	2nd aerial check 7/6/2022
2	Ash (not oak)	Semi-mature oak on edge of dry ditch. A north-facing crevice is present at 5 m height between two branches while a large cavity is present on a south-facing branch at 4 m height.	Moderate Remains moderate	North facing crevice negligible. South facing cavity has rams horns which have moderate potential for low numbers of individual small bats.	No change to feature. No evidence of bats
3	Sycamore	Semi-mature sycamore with cracked bark, which is lifted in places. A cavity is present on the south-facing branch at 3 m height.	Moderate Remains moderate	Bark features negligible. Cavity on South facing branch has an entrance of 4cm diameter and extends 15cm into branch. Moderate potential for individual bats.	No change to feature. No evidence of bats
7	Sycamore	Semi-mature sycamore in hedgerow with south-facing cavity at 3 m height. A large cavity, where a branch has snapped, is present on the south side, whilst on the west side several small cavities are present along a branch	High Downgraded to low	Cavity on South side is 15cm deep with an entrance of 8cm diameter. Downgraded to low. All other features downgraded to negligible after close inspection.	N/A
8	Oak	Mature tree on edge of area of dense scrub in the south-west of the site. A close inspection of this tree was not possible, but it is of an age and size that could support potential roost features.	Moderate (precautionary) Remains moderate	Hazard beam on lowest branch on South side of tree. Moderate potential for individual small bats. Hollow dead branch at a height of 3m on west side of tree. Cavity 3cm x 20cm moderate potential for small bats.	No change to features. No evidence of bats

4.4 BREEDING BIRDS

4.4.1 Breeding bird surveys were undertaken between May and June 2022, opportunistically recording in a 'look-see' manner in accordance with Gilbert 2011[16]. The results are presented here in Figure 15 and Figure 16, with the species list in Table 11 and Table 12. In summary there are three priority species and two red-list species.

Survey Visit 1

4.4.2 The survey was carried out on 10th May 2022, and recorded an unremarkable bird assemblage comprising of 16 different species. Of these, three are Priority bird species (dunnock, house sparrow and song thrush) and one is red listed by BTO (house sparrow).

4.4.3 There was one singing dunnock and four song thrush showing signs of breeding on site. There were also 11 individual house sparrows recorded, however they were all recorded using the houses located directly offsite.

Table 11: Breeding bird records (visit 1)

Name	Latin	Protection

Wood pigeon	*Columba palumbus*				*
Wren	*Troglodytes troglodytes*				*

Survey Visit 2

4.4.4 The second survey was carried out on 9th June 2022. A similar assemblage to visit 1 was recorded, but this second visit also revealed willow warbler within hedgerow 3a and house martin (red list) were foraging within the open grassland of the Site.

5 ASSESSMENT

5.1 DESIGNATED SITES

5.1.1 The Site does not lie within or adjacent to any designated areas. The nearest statutory designation is Manchester Mosses SAC/SSSI c.4km south, which due to distance and scale of the proposals there will be no affect. The proposals will therefore not trigger a Habitats Regulations Assessment.

There are six non-statutory designations all of which are separated from the Site by large urban areas and therefore none will be affected.

5.2 HABITATS & PLANTS

Status

5.2.1 The Site is network by a series of hedgerows which are priority habitats, although none are important from a HEGS perspective.

5.2.2 There is an important area of semi-improved neutral grassland towards the southeast of the Site (TN1 on Figure 8). This grassland is a borderline grassland between unimproved (priority habitat) and semi-improved. The grassland is colonised by a large colony of marsh and hybrid orchid types, and the average species richness is 12-15sp/m^2.

5.2.3 There are two ponds on site. The ponds will be maintained and form an important component of the drainage strategy for the post-construction site.

5.2.4 All habitats across the Site, although not priority, provide an important contribution towards local biodiversity value in the area.

5.2.5 There are two stands of giant hogweed towards the south of the Site at TN14 (refer to Figure 8 and Figure 10).

Unmitigated Impacts

5.2.6 The Site will be cleared, removing all habitat in advance of construction, being replaced by a landscape scheme as shown in Figure 3 and Figure 4. The prime

impacts to habitats are as follows (impacts to individual fauna species are dealt with in separate sections below):

i C.*m of priority habitat hedgerows will be lost the proposals. Animals taking refuge at the base of hedges could be killed or injured, including hedgehog.
ii The proposals will remove an important colony of orchids;
iii C.*m^2 important (but not priority) grassland will be lost to the proposals.

5.2.7 Giant hogweed has been recoded as present. It is listed on Section 14(9), Part II, WCA 1981 which lists plants that are banned from being planted, or otherwise caused to grow in the wild. These rules also apply to specimens of listed invasive alien species, including any live part of the species, such as seeds or cuttings that might grow or reproduce. Giant hogweed in particular represents a significant risk to health and safety and although it is not unlawful to have such a plant on your land it should be removed from Site in the appropriate manner.

Recommendations

5.2.8 A CEMP Biodiversity should be provided, compliant with BS42020[2], containing a Biodiversity Risk Assessment, details of Biodiversity Protection Zones and the use of Heras fencing, details of the role of an Ecological Clerk of Works (ECW) and in particular should include the following:

Hedgerows

5.2.9 The hedgerow removal process should a two-staged operation, with the hedgerow removed down to 30cm and left overnight (no longer), with the final 30cm removed next day.

5.2.10 Hedgerow creation should use native species only. Five species or more should be selected from Table 13 and planted double-staggered with 30cm spacing between plants. The scheme should realise at least a 10% gain in hedgerow units, proven through an appropriate metric calculation.

Grasslands

5.2.11 The neutral grassland should be retained in situ wherever possible, avoiding, and protected from, any impact using Heras fencing. The retained area should be shown on a Biodiversity Protection Zone plan in the CEMP.

5.2.12 Where retention is not possible the turf of the neutral grassland at TN1 (refer to Figure 17) should be lifted and stored separately, to be re-used in the landscape scheme. A turf storage method statement should be provided in advance of the turf being lifted to be approved by the LPA, and should include:

- Location of the stored turves;
- Method of lifting and transport;
- Details of watering
- Details of replacement

Table 13: Native Hedge Species

Common name	Latin name
Hawthorn	*Crataegus monogyna*
Elder	*Sambucus nigra*
Ash	*Fraxinus excelsior*
Dog-rose	*Rosa canina*
Blackthorn	*Prunus spinosa*
Dogwood	*Cornus sanguinea*
Field maple	*Acer campestre*
Hazel	*Corylus avellana*
Holly	*Ilex aquifolium*
Crab apple	*Malus sylvestris*
Spindle	*Euonymus europaeus*

Invasive Species

5.2.13 An invasive species survey of the Site should be carried out prior to any persons entering the land. The survey should identify the location and size of stand of any invasive species found including giant hogweed.

5.2.14 Appropriate advice from an experienced invasive non-native (alien) consultant should be obtained and the plant(s) removed using the appropriate methods prior to commencement on site. Any vehicle entering the Site prior to eradication should have the wheels/equipment washed prior to leaving the Site.

Landscape Scheme

5.2.15 The scheme should include the following:

i All species proposed in the scheme should be native and of local provenance, where possible

ii Wherever possible hedgerows and the neutral grassland at TN1 should be retained. Where this is not possible the grassland turf should be re-used in the scheme as described in 5.2.12.

iii Ponds should be landscaped in a manner that encourages water vole colonisation and provides for any colonising great crested newt in the future (refer to 6.3).

iv Overall, the landscaping scheme should contribute positively to the Biodiversity Net Gain strategy as discussed in 5.8.

5.3 AMPHIBIANS

Status

5.3.1 Common toad was recorded by the data trawl, the closest record being 1.7 km to the north- east of the site, beyond a main road.

5.3.2 Great crested newt have been recorded as present in Pond 6 about 200m east of the Site boundary in an eDNA survey in 2021. There are a further two ponds on Site and three ponds within 500m of the Site boundary all of which returned negative but could be used by GCN.

Legislation & Policy

5.3.3 The more common species of amphibians are partially protected by the WCA 1981, making it an offence to deliberately kill or injure an animal, and are priority species.

5.3.4 Great crested newts (GCN) are highly protected as a European Protected Species, as well as being a Schedule 5 Wildlife and Countryside Act 1981 fully protected amphibian, as such are the subject of protection under the Conservation Regulations 2017 and the WCA 1981, making it unlawful to kill, injure an animal or damage, destroy or obstruct an animal's access to its place of shelter. Licenses can be provided to make offences lawful where appropriate mitigation is provided.

5.3.5 This development has elected to join the District Level Licensing (DLL) scheme to mitigate impacts to GCN from the proposals and thus acquire a licence from Natural England. An IACPC has been provided by Natural England (refer to 6.4).

5.3.6 The local authority policy CP12 provides for protected and priority species.

Unmitigated Impacts

5.3.7 Commoner amphibians could be killed or injured by pond drain-down if carried out during site clearance.

5.3.8 The DLL scheme still requires immediate impacts of killing and injury of GCN to be mitigated through pre-site clearance capture of GCN.

Recommendations

5.3.9 If draining ponds, filter gauze should be placed over the inlet for the final 30cm, and an ECW should be allowed to net the final 30cm and search the muddy substrate before final pond clearance earthworks.

5.3.10 The first stage Conservation Payment as defined on the IACPC should be paid to NE to receive the counter-signed certificate prior to planning determination. (may be required for final validation).

5.3.11 The site should be searched by a suitably qualified ecologist, moving GCN to safety prior to site clearance. This involves:

i Hand-searching searching refugia
ii Destructively searching suitable terrestrial habitat, such as that within 50m of an on-site pond, without the use of any fences or pitfall traps
iii Hand searching the mud and last 30cm of water in ponds that are drained down.

5.4 BADGERS

Status

5.4.1 No evidence of badgers or their setts has been recorded on or within 30m of the Site, but there are records of badgers within the local landscape suggesting they are active in the area.

Legislation & Policy

5.4.2 Badgers occupying setts and their setts (tunnels and chambers where they live) are protected by the Protection of badgers Act 1992.

5.4.3 It is good practice to take account of badgers if they could potentially use a site.

Unmitigated impacts

5.4.4 Badgers may create a new sett within the Site or up to 30m from the Site in the interim between planning determination and commencement of proposals. This is particularly important with hedgerows.

5.4.5 Animals may commute across the site and therefore be subject to adverse impacts from construction.

Recommendations

5.4.6 A badger survey should be carried out within 3 months prior to commencement of proposals, and should evidence be found a method statement should be provided to the LPA for approval prior to works commencing. Further works

may require a licence from Natural England should damage to a sett or disturbance to badgers occupying a sett be anticipated. This mitigation is not required if the works commence before 12th August 2023.

5.4.7 During construction, the Principal Contractor should ensure that appropriate safety measures for badgers must be taken to avoid harm to animals visiting the site after nightfall. They will not be present post-dawn until dusk. Recommendations are for RAMS to include:

i Works should be limited to daylight hours.
ii Any excavations greater than 1.5m in depth and to be left open overnight will have a means of escape for any animals that might fall in (e.g. a plank).
iii Similarly, open-ended pipes are to be covered denying overnight access to any animals that may otherwise become trapped.
iv Any internal or boundary barriers such as fencing should allow badgers freedom of access throughout the development site and should avoid using orange or brightly coloured plastic tape that can alarm badgers. Barriers should at a minimum provide a gap 200mm high at regular intervals, although permanent access under for example post and rail fence is preferred.
v The contractors and sub-contractors must not leave any food on the site, including food wrappers and discarded food items. Security personnel should be instructed not to feed badgers at night.

5.5 BATS

Status

5.5.1 There are no roosts present on Site, or structures that could provide roosting opportunities for bats.

5.5.2 Three trees have ‘Moderate’ potential for bats to roost, trees T2, T3 & T8. Endoscope surveys have shown that there is currently no evidence of bat use in these trees. Two further trees have ‘Low’ potential, T6 & T7, the latter being downgraded from ‘High’.

5.5.3 The bat foraging and commuting habitat has been graded as 'Low', and the subsequent transect surveys showed that the bat assemblage is unremarkable, dominated by a small number of pipistrelle species.

Legislation & Policy

5.5.4 In Britain all bat species and their roosts are legally protected, by both domestic and international legislation. This means it may be a criminal offence if you:

i Deliberately take, injure or kill a wild bat
ii Intentionally or recklessly disturb a bat in its roost or deliberately disturb a group of bats.
iii Damage or destroy a place used by bats for breeding or resting (roosts) (even if bats are not occupying the roost at the time)
iv Possess or advertise/sell/exchange a bat of a species found in the wild in the EU (dead or alive) or any part of a bat.
v Intentionally or recklessly obstruct access to a bat roost.

5.5.5 The local authority policy CP12 (1) provides for protected species.

Unmitigated Impacts

5.5.6 A tree with a potential roost feature could be felled in a manner that may have an adverse effect on a bat.

5.5.7 The bat foraging and commuting habitat has been graded as 'Low', and the subsequent transect surveys showed that the bat assemblage is unremarkable, dominated by a small number of pipistrelle species.

Recommendations

5.5.8 In order to protect bats from adverse effects:

i The trees that have 'Moderate' potential (T2, T3 & T8) should be removed with a licensed bat person present who may elect to undertake another endoscope assessment prior to felling, and these trees should be soft-felled (refer to Figure 14).

ii Trees that are graded 'Low' potential (T6 & T7) should be soft-felled with an ECW present.

iii The survey data is only valid for surveys from the preceding season, so should works be postponed beyond the active season in 2023 bat surveys should be updated.

5.5.9 Post-construction, at least one bat box / feature lost should be provided, of woodcrete-type construction and maintenance-free as defined by Mitchell-Jones 2004[17]:

- There should be a minimum of five boxes to mitigate the five features removed i.e., T2, T3, T6, T7 & T8.
- The boxes should be provided in advance of tree removal.
- Boxes must not be illuminated by the lighting scheme.
- Box provision should be detailed in a Biodiversity Enhancement Plan for the proposals.

5.5.10 The landscape scheme should provide linear features at least the length that is being lost. Native species should be used. These features should be interconnected wherever possible and connect to the wider landscape beyond the Site boundaries. The lighting scheme should leave these features in as dark a place as possible, avoiding direct illumination where health and safety allows.

5.6 BREEDING BIRDS

Status

5.6.1 There are numerous records of priority and red & amber listed breeding birds of Conservation Concern, and more commoner species throughout the Site and within 2km of the Site. The field survey corroborated this recording 20 breeding birds, of which 18 were recorded as likely breeding on site including

[17] **Mitchell-Jones, A. J. 2004** Bat Mitigation Guidelines. English Nature, ISBN 1 85716 781 3. January 2004.

three priority species and also including red-listed house sparrow and house martin.

5.6.2 The habitat on site is largely suitable for breeding birds.

Legislation & Policy[18]

5.6.3 All wild breeding birds are protected by Part 1 of the Wildlife and Countryside Act 1981 from deliberate or reckless damage or destruction. It is unlawful to;

- intentionally kill, injure or take wild birds
- intentionally take, damage or destroy a wild bird's nest while it's being used or built
- intentionally take or destroy a wild bird's egg

5.6.4 For further information, please visit: https://www.gov.uk/guidance/wild-birds-protection-surveys-and-licences

Unmitigated Impacts

5.6.5 Birds could be killed or injured, and their nest or eggs could be damaged or destroyed.

5.6.6 All breeding bird habitat will be lost to the proposals.

Recommendations

5.6.7 Where clearance of vegetation likely to support nesting birds takes place between 1st March and 31st August, a qualified ECW should visit the Site within 48 hours prior to commencement to confirm no breeding birds are present that will be affected by the proposals. Where this involves dense or extensive vegetation, the ECW is unlikely be able to confirm this. Should an ECW be required, the results of the visit should be kept on file to show the authorities should it be required.

[18] There are variations between countries in the UK, but the principle is enshrined here

5.6.8 The extent of works is usually minor compared to available alternative habitat which can be regionally vast, such that the loss of bird breeding habitat is considered to be negligible. Nonetheless, it is good practice to provide opportunities for birds to continue to breed throughout the completed development. One bird box per red or amber and priority species to be affected should be provided per hectare of strategic landscaping. This means that as there are 5 species across c.4 hectares, which totals 20 bird boxes. These 20 boxes should include:

- 5 house sparrow terraces
- 5 house martin boxes (where possible to attach to buildings)
- 5 open-fronted boxes
- 5 front-holed boxes

5.6.9 Box provision should be detailed in a Biodiversity Enhancement Plan for the proposals.

5.7 HEDGEHOG

Status

5.7.1 There are numerous records of hedgehog, although no evidence of their presence has been found, but the habitat is suitable, especially at the base of hedgerows.

Legislation & Policy

5.7.2 Hedgehogs are a priority species which should be taken into account as part of the planning authority's Biodiversity Duty.

Unmitigated Impacts

5.7.3 Construction works could inadvertently kill or injure an animal. Reasonable avoidance measures are provided to avoid potential impacts.

Recommendations

5.7.4 The following methods of working should be carried out to reasonably avoid killing or injuring hedgehogs that may be present on site:

i Works carried out should be informed by survey data not less than 5 breeding seasons in age;

ii If the proposals require burning piles of woody material, prior to the burn move the pile from its original location on the morning of the burn to ensure there are no hedgehogs in its base.

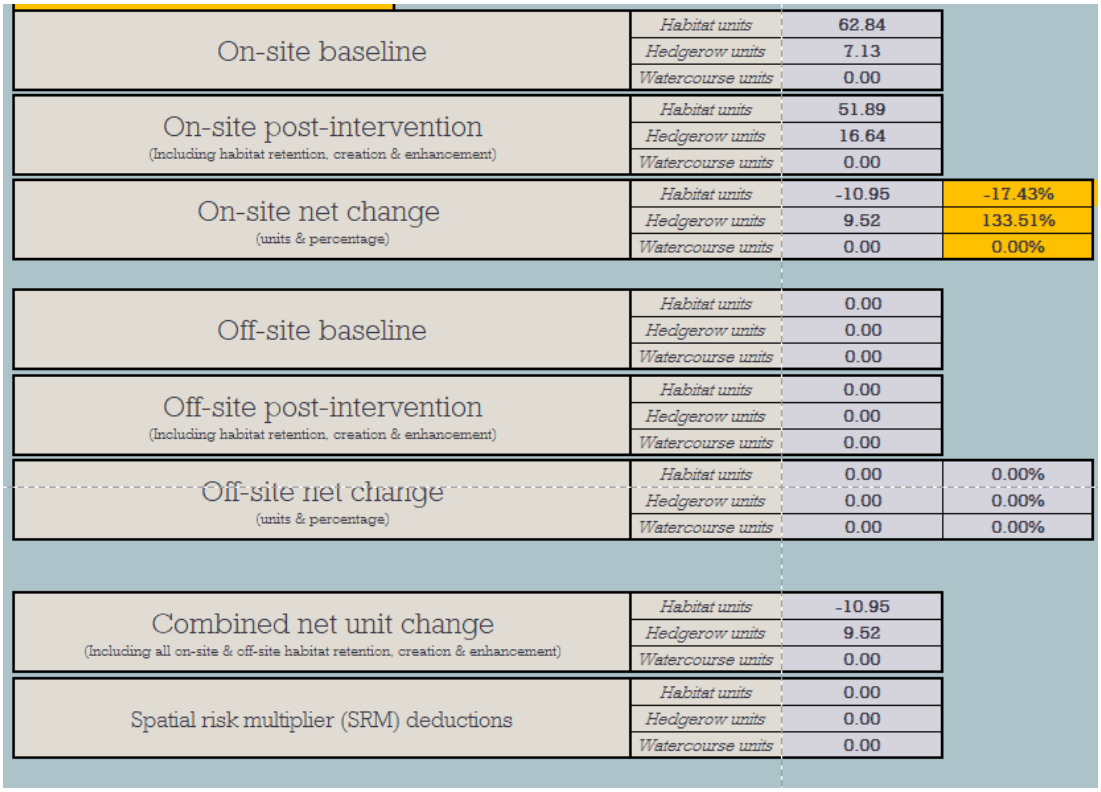
iii Do not leave any food or litter on the site – food attracts hedgehogs to come to your site and some types of litter can be harmful even lethal.

iv Place small holes 13 x 13cm in barriers like walls or fences to let ground dwelling creatures such as hedgehogs pass freely through the development site.

v Make sure trenches and other open features 50cm deep or more have a means of escape for hedgehogs – block open pipes to stop a hedgehog getting in.

vi Provide hedgehog boxes and log piles post construction. Box provision should be detailed in a Biodiversity Enhancement Plan for the proposals.

5.8 BIODIVERSITY NET GAIN



Status

5.8.1 The Biodiversity Metric v4.0 is the latest version to be employed and the results are provided in Box 1 below, provided as a separate excel workbook to provide the full results. The Condition Tables are summarised in 6.6.

5.8.2 The BNG assessment has valued all habitats within the existing baseline scenario and assesses the impact of the proposals by taking into account all habitats to be lost, retained/translocated, and created in the operational phase.

5.8.3 The Metric results in a deficit of -10.95 Habitat Units (-17.43%), +9.52 Hedgerow Units (+133.51%), and 0 River Units.

Box 1: BNG Headline Results

On-site baseline	*Habitat units*	62.84	
	Hedgerow units	7.13	
	Watercourse units	0.00	
On-site post-intervention (Including habitat retention, creation & enhancement)	*Habitat units*	51.89	
	Hedgerow units	16.64	
	Watercourse units	0.00	
On-site net change (units & percentage)	*Habitat units*	-10.95	-17.43%
	Hedgerow units	9.52	133.51%
	Watercourse units	0.00	0.00%
Off-site baseline	*Habitat units*	0.00	
	Hedgerow units	0.00	
	Watercourse units	0.00	
Off-site post-intervention (Including habitat retention, creation & enhancement)	*Habitat units*	0.00	
	Hedgerow units	0.00	
	Watercourse units	0.00	
Off-site net change (units & percentage)	*Habitat units*	0.00	0.00%
	Hedgerow units	0.00	0.00%
	Watercourse units	0.00	0.00%
Combined net unit change (Including all on-site & off-site habitat retention, creation & enhancement)	*Habitat units*	-10.95	
	Hedgerow units	9.52	
	Watercourse units	0.00	
Spatial risk multiplier (SRM) deductions	*Habitat units*	0.00	
	Hedgerow units	0.00	
	Watercourse units	0.00	

Legislation & Policy

5.8.4 The Environment Act 2021 now makes it unlawful for development to result in a net loss, but the percentage gain required has not yet been lawfully defined (10% is referred to as probable).

5.8.5 The NPPF para 180[a] seeks a hierarchical approach to mitigation (avoid, mitigate or compensate).

5.8.6 Local policy does not yet reflect a BNG requirement.

Biodiversity Gain Plan

5.8.7 It is not possible to reach a 10% gain within the Site boundaries as required by the forthcoming Environment Act legislation. In line with NPPF para 180[a], the mitigation hierarchy has been employed:

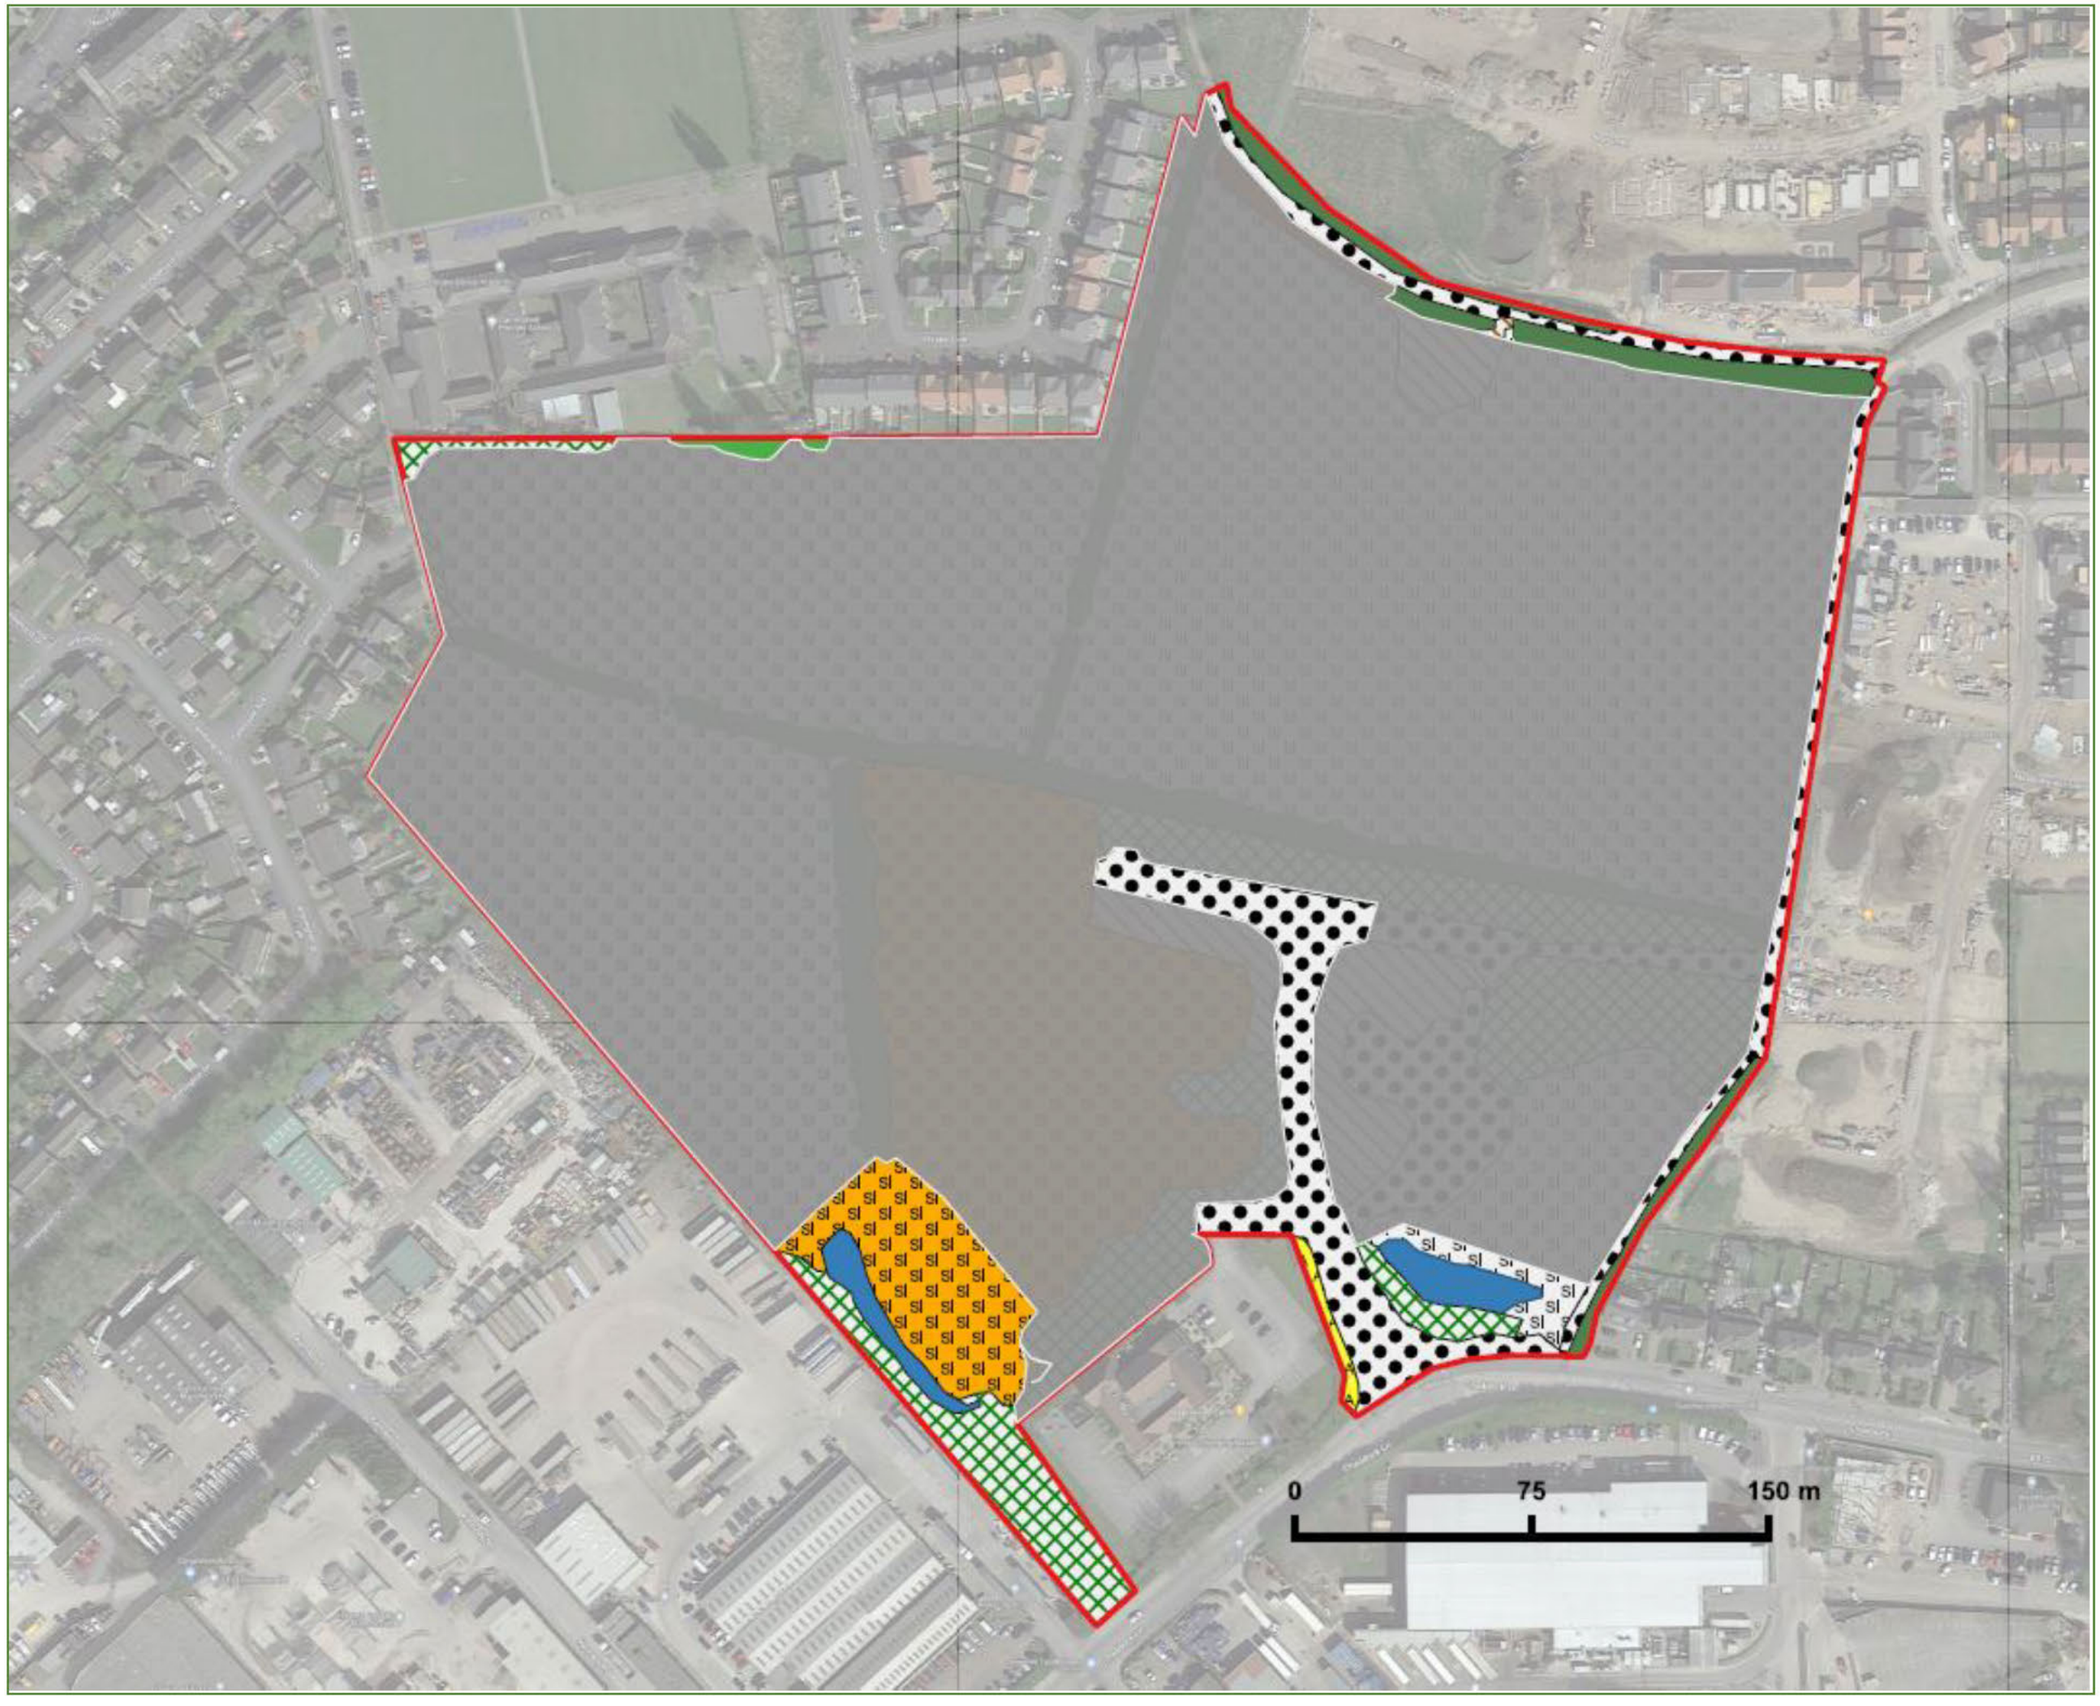
Avoid

5.8.8 A number of existing habitats are being retained on Site, which include (refer to Figure 17):

i Hedgerows H1, H5, H6 & H7.
ii The two existing waterbodies on Site to the southwest and southeast.
iii Grassland surrounding both waterbodies.
iv A small group of trees to the northwest boundary.
v Scrub habitat (0.52ha of 1.13ha in total), namely to the southwest. This habitat can be further enhanced and includes T8.
vi Amenity grassland.
vii Hardstanding (no ecological value).

Mitigate

5.8.9 The following mitigation measures are proposed:



i Translocation of good-quality neutral grassland which totalling c.1.77ha of existing 1.87ha. This habitat is the greatest ecological resource at the Site.
ii The control of invasive giant hogweed.

Compensation

5.8.10 After employing mitigation, the impact still remains as is shown in the Metric results, with a deficit of -10.95 Habitat Units. The options are:

i Habitat within the site boundary should be created or enhanced.
ii Where this is not possible, the impact should be offset by habitat creation or enhancement on land within the Wigan administrative area.
iii As a last resort a financial compensation can be made, via a planning condition. This compensation should target biodiversity within the local area and seek to provide or enhance habitat of at least the broad habitat type to the lost at the Site, normally controlled in the form of a s106 agreement. For this option further liaison with the LPA is recommended.

Figure 17
Retained Habitat

- Site boundary
- Scattered trees
- Dense scrub
- Semi-improved neutral grassland
- Tall ruderal
- Amenity grassland
- Bare ground
- Bracken
- Species-poor hedgerow (Priority Habitat)
- Pond
- Poor semi-improved grassland
- Habitat to be lost to proposals

6 APPENDICES

6.1 APPENDIX I: LEGISLATION

The Environment Act 2021

6.1.1 The Act deals with targets to improve air quality, biodiversity, water, and waste reduction and resource efficiency. Nature and Biodiversity is dealt with directly in Part 6, which is aimed at:

- Strengthened biodiversity duty
- Biodiversity net gain to ensure developments deliver at least 10% increase in biodiversity
- Local Nature Recovery Strategies to support a Nature Recovery Network
- Duty upon Local Authorities to consult on street tree felling
- Strengthen woodland protection enforcement measures
- Conservation Covenants
- Protected Site Strategies and Species Conservation Strategies to support the design and delivery of strategic approaches to deliver better outcomes for nature
- Prohibit larger UK businesses from using commodities associated with wide-scale deforestation
- Requires regulated businesses to establish a system of due diligence for each regulated commodity used in their supply chain, requires regulated businesses to report on their due diligence, introduces a due diligence enforcement system

Conservation of Habitats and Species Regulations 2017 (as amended)

6.1.2 These Regulations consolidate the Conservation (Natural Habitats, &c.) Regulations 1994 and amend the 2010 Regulations, and together they transpose the European Habitats Directive into domestic law. The Regulations provide for the designation and protection of 'European sites' (referred to in this assessment as international sites), the protection of 'European protected

species', and the adaptation of planning and other controls for the protection of such.

6.1.3 Under the Regulations, UK competent authorities have a general duty to have regard to the EC Habitats and Birds Directives. They require competent authorities to consider or review planning permission, applied for or granted, affecting a European site, and, subject to certain exceptions, restrict or revoke permission where the integrity of the site would be adversely affected. Under Regulation 63, where any proposed plan or project is likely to have an effect on a Natural 2000 site or qualifying feature for a site, then the competent authority (normally the local planning authority) will carry out an Appropriate Assessment of those effects, referred to as a Habitats Regulations Assessment (HRA).

Species

6.1.4 The Regulations make it an offence (subject to exceptions) to deliberately capture, kill, disturb, or trade in the animals listed in Schedule 2, or pick, collect, cut, uproot, destroy, or trade in the plants listed in Schedule 4. However, these actions can be made lawful through the granting of licenses by the appropriate authorities. Licenses may be granted for a number of purposes (such as science and education, conservation, preserving public health and safety), but only after the appropriate authority, including the planning authority, is satisfied that there are no satisfactory alternatives and that such actions will have no detrimental effect on wild populations of the species concerned: these three elements form the basis of the three derogations ‘tests’ to be applied to satisfy European legislation.

Wildlife and Countryside Act 1981

6.1.5 The principle statutory instrument that governs nature conservation in England is the Wildlife and Countryside Act 1981 as amended (WCA 1981).

6.1.6 The WCA 1981 consolidates and amends existing national legislation to implement the Convention on the Conservation of European Wildlife and Natural Habitats (Bern Convention) and the Birds Directive in Great Britain. It

is complimented by the Wildlife and Countryside (Service of Notices) Act 1985, which relates to notices served under the 1981 Act, and the Habitats Regulations 2017 (as amended), which implement the Habitats Directive.

6.1.7 Containing four Parts and seventeen Schedules, the Act covers protection of wildlife (birds, and some animals and plants), the countryside, National Parks, and the designation of protected areas, and public rights of way.

6.1.8 Amendments to the Act have been made and there is a statutory quinquennial review of Schedules 5 and 8 (protected wild animals and plant respectively), undertaken by the country agencies and co-ordinated by the Joint Nature Conservation Committee. There have been 6 reviews with the 7th commenced in 2021.

Protection of Badgers Act 1992

6.1.9 There are very few Acts of Parliament that are dedicated to one species with conservation as part of the aim. This Act supplements the WCA 1981 by affording protection to badgers against disturbance and their setts against unlawful damage and destruction. It provides a licensing system to allow works to proceed in a sensitive manner.

Countryside and Rights of Way (CRoW) Act 2000

6.1.10 The CRoW Act 2000 places a duty on Government Departments and the National Assembly for Wales to have regard for the conservation of biodiversity and maintain lists of species and habitats for which conservation steps should be taken or promoted, in accordance with the 1992 Rio Convention on Biological Diversity. The Act makes various amendments to the WCA 1981 including increasing SSSI protection, management and policing.

6.1.11 DEFRA published the first 'list' in 2002 under Section 74 of the CRoW Act 2000, which was identical with the UK BAP list at the time, now superseded by the Natural Environment and Rural Communities Act 2006 Section 41 list (see below).

Natural Environment and Rural Communities (NERC) Act 2006

6.1.12 The NERC Act 2006 makes provision in respect of biodiversity, pesticides harmful to wildlife and the protection of birds, and in respect of invasive non-native species.

6.1.13 Section 40 of the Act lays a duty on authorities to have regard to the purpose of conserving biodiversity in compliance with the UN Biodiversity Convention in 1992. This is otherwise known as the 'Biodiversity Duty' and refers in particular to those Habitats & Species of Principle Importance listed in Section 41 of the Act. Guidance for local authorities on implementing the Biodiversity Duty is provided in DEFRA (2007).

Section 41 List

6.1.14 For the purposes of conserving biodiversity, habitats and species of principle importance are listed through the provisions set out in Section 41 of this Act (replacing Section 74 of the CRoW Act 2000), referred to in this chapter as the Section 41 List. DEFRA 2007 references the UK and local Biodiversity Action Plans (BAPs) (see below) as the source of data for the Section 41 List. This assessment uses the List, as updated by the UK BAP, as a key guide for identification of ecological features to be affected by proposals, and to guide and weigh recommendations and mitigation.

6.1.15 The Section 41 List has been further refined by DEFRA 2007, where seven sectors have been selected where public bodies and other stakeholders can make a significant contribution to biodiversity conservation, through their Biodiversity Duty. Habitats and species relevant to each sector have been identified to help non-conservation professionals consider where the List might apply to them. Of these seven, two are relevant to this assessment i.e. Land Use Planning and Regional & Local Government. The List was last updated in 2010 and referenced here as Natural England 2010.

ODPM Circular 06/2005 Biodiversity and Geological conservation (withdrawn but report remains compliant)

6.1.16 This Circular provides administrative guidance on the application of the law relating to planning and nature conservation as it applies in England. With the onset of the National Planning Policy Framework in March 2012, this remains as the principal source of statutory interpretation of the legislation listed above.

6.1.17 The Circular is presented in four Parts, of which the first three are relevant here. The Circular requires updating since the publication of the National Planning Policy Framework in March 2012 replaced Planning Policy Statements (see below), but should be applied as follows:

Part I: Internationally Designated Sites

- This Part provides guidance on implementation of the Conservation of Species and Habitat Regulations 2010 (updating the Habitat Regulation 1994), in compliance with the Habitats Directive. The principal is maintenance of the Natura 2000 suite of sites. Helpful definition of derogation from the Habitats Directive and the 'three tests' is provided.
- The principal of compensation is included, although this will be subject to strict testing under the 'three tests' system and is unlikely to be effective at an international level.

Part II: Nationally Designated Sites

- This Part focusses on Sites of Special Scientific Interest (SSSI) and provides guidance on interpretation of the Wildlife and Countryside Act 1981 (as amended, inc. the CROW Act 2000).

Part III: Conservation of habitats and species outside designated areas

- Part III pulls together statutory instruments and the route through which their protection is linked to Biodiversity Action Plans in the UK, both nationally and locally.

6.1.18 Section 84 of this Circular states that the habitats and species listed in the S41 List are capable of being a material consideration.

6.1.19 Section 85 refers to the CRoW 2000 Act, Section 74, which has been superseded by the S41 List and requires updating. The importance of the S41 List in principle is set out here.

6.1.20 Section 95 identifies forthcoming DEFRA advice on Local Wildlife Sites. DEFRA 2006 subsequently defines local wildlife sites and their management, linking local wildlife sites to the Conservation of Habitats and Species Regulations 2010 (Regulation 39[3]) where they are referred to as 'Stepping Stones'. This is a key link for local wildlife site protection via the Natural Environment White Paper, and Lawton 2010 , and subsequently informing the England Biodiversity Strategy for 2020 , all of which provide policy guidelines for protection of stepping stones integral to ecological networks, the latter as referred to most recently in the National Planning Policy Framework 2012 (see earlier).

6.2 APPENDIX II: SOFT FELLING METHODS

6.2.1 The felling work will be undertaken during weather conditions suitable for bats to be active, avoiding the main hibernation period, to minimise the risk of significant disturbance;

6.2.2 A supervising ecologist with appropriate licence/experience will be present on site to advise on felling methods and what to do in the event bats are encountered;

6.2.3 Sections of the tree containing features suitable for roosting bats, i.e., thick ivy stems, will be softly lowered to the ground, following which these will be subject to a more detailed inspection by the supervising ecologist to confirm absence of bats;

6.2.4 After felling, the sections of the tree supporting thick ivy stems will be retained in a suitable location overnight allowing bats to disperse, in the unlikely event that any are present but undetectable.

Photograph 17. Sections of the tree containing features suitable for roosting bats will be softly lowered to the ground to be inspected by ECW

6.4 APPENDIX IV: NE PROVISIONAL DLL IACPC

The Conservation of Habitats and Species Regulations 2017

Great Crested Newt District Level Licensing Impact Assessment & Conservation Payment Certificate

T. 020 8026 1089
E. gcndll@naturalengland.org.uk

The appropriate authority shall not grant a licence under Regulation 55(9)(b) unless they are satisfied that actions authorised will not be detrimental to the maintenance of the population of the species concerned at a favourable conservation status in their natural range.

This Certificate is provisional once all information required in sections 1, 2, 3 and 4 has been inserted by Natural England and it has been issued to the Applicant. A provisional Certificate shall be given the date inserted by Natural England in section 4. A Certificate remains provisional until:

- **It has been signed and dated by the Applicant in section 6; and**
- **Natural England's administration fee and (if applicable) the 1st Stage Conservation Payment has/have been paid; and**
- **It has been signed and dated on behalf of Natural England in section 8.**

At which point this Certificate shall be complete and effective and shall be given the date on which it is signed by Natural England in section 8.

A provisional Certificate that determines that a 1st Stage Conservation Payment is required will lapse after 6 weeks from the date given in section 4. Lapse date: 28/08/2023

A provisional Certificate that determines that a 1st Stage Conservation Payment is not required will lapse after 3 months from the date given in section 4. Lapse date: N/A

4.2 Applicants must also make a Conservation Payment to Natural England, to allow Natural England to pay for the creation and maintenance of sufficient new great crested newt habitat to compensate for the impacts of the Applicant's proposals for 25 years.

4.3 If the total number of compensation ponds required is 3 or more the Conservation Payment shall be split into two staged payments: a 1st Stage Conservation Payment and a 2nd Stage Conservation Payment.

4.4 An Applicant who is not required to make staged payments will be issued with a VAT-inclusive invoice for the Conservation Payment once it has applied to Natural England for a GCN District Level Licence. That invoice will be payable within 28 days of issue and refundable only in the circumstances set out at clauses 5.8, 5.9 and 5.10, below.

4.5 An Applicant who is required to make a 1st Stage Conservation Payment will be issued with a VAT-inclusive invoice for that payment once it has signed the provisional Impact Assessment and Conservation Payment Certificate at section 6, below, and returned it to Natural England. That invoice will be payable within 28 days of issue and refundable only in the circumstances set out at clauses 5.8, 5.9 and 5.10 below. When an Applicant is required to make a 1st Stage Payment Natural England will not complete the Impact Assessment and Conservation Payment Certificate by signing and dating it at section 8 until that payment has been made.

4.6 An Applicant who has made a 1st Stage Conservation Payment will be issued with a VAT-inclusive invoice for the 2nd Stage Conservation Payment once it has applied to Natural England for a GCN District Level Licence. That invoice will be payable within 28 days of issue and refundable only in the circumstances set out at clauses 5.8, 5.9 and 5.10, below.

4.7 Except for householder home improvement projects or where planning permission has been received following a householder planning application a further non-refundable fee of £690 will be charged at the point of issue of any subsequent licence under reg. 55 of the Conservation of Habitats and Species Regulations 2017, payable within 28 days of issue.

Has the Conservation Payment for the required amount of compensation been calculated in accordance with standard procedure?	Yes ☑ No ☐
If no, please provide details:	N/A

Basis of calculation of Conservation Payment:

4.1 compensatory ponds required at £[redacted] each = £[redacted] plus VAT = total £[redacted].

See 4.2 to 4.6, above

If a 1st Stage Conservation Payment is required, the Conservation Payment shall be split as follows:

1st Stage Conservation Payment: £[redacted] plus VAT = total £[redacted]. See 4.5, above

2nd Stage Conservation Payment: £[redacted] plus VAT = total £[redacted]. See 4.6, above

Plus:

Administration fee for Impact Assessment and Conservation Payment Certificate £[redacted] plus VAT = total £[redacted] See 4.1, above

Fee payable on the issue of a licence £[redacted] (no VAT) See 4.7, above

Date: 21/06/2022 See clause 5.11, below

A breakdown of the Conservation Payment per pond is given at Annex 2.

The Conservation Payment must be made in full before a licence under regulation 55 of the Conservation of Species and Habitats Regulations 2017 may authorise activities that would otherwise breach Regulation 43 of those regulations.

Copyright © Natural England 2020

5. Further Important Information

5.1 It is the duty of the Applicant to inform Natural England if the extent of the land affected by the proposed development is not exactly as shown on the Plan attached as Annex 3 to this Certificate or if it alters at any time after the date of this Certificate. An offence may be committed if incorrect information is submitted to Natural England in the course of the licensing process.

5.2 Natural England shall be entitled to terminate this Certificate if information subsequently received causes it to reasonably conclude that the impacts on great created newts, or the required level of compensation, of/for the Applicant's proposals on the Site have been under-stated in this Certificate. Before terminating this Certificate Natural England shall give the Applicant reasonable notice of its intentions and the opportunity to make a written representation against withdrawal.

5.3 This Certificate relates only to the development described in this form and not to any associated or enabling development.

5.4 Natural England's assessment of the total number of ponds to be lost at the Site is informed by the information provided by the Applicant in its Enquiry Form. However, where an Applicant has not provided up to date survey data Natural England determines the number of ponds to be lost at the Site from its own information. In all cases Natural England retains discretion in assessing the number of ponds to be lost as a result of the Applicant's proposals at the Site and its decision shall be conclusive.

5.5 This Certificate is not a licence granted under reg. 55 of the Conservation of Habitats and Species Regulations 2017 (henceforth "the 2017 Regulations") and is not a confirmation or warranty that such a licence will subsequently be granted.[1] Natural England excludes all warranties and representations in so far as the law permits.

5.6 If Natural England subsequently grants a licence to the Applicant under reg. 55 of the 2017 Regulations any such licence will be subject to the conditions therein set out, which may include (but not be limited to) conditions that activities may not be commenced until the Applicant has paid the Conservation Payment in the amount and manner set out herein and that activities may not be commenced until compensatory works have reached a specified stage of completion.

5.7 If Natural England subsequently grants a licence to the Applicant under reg. 55 of the 2017 Regulations Natural England agrees to use and hold Conservation Payment monies payable by and received from the Applicant for the purposes and period of time set out in Annex 2 to this Certificate. Any surpluses properly arising after 25 years from the date of the grant of a licence shall be retained and used by Natural England for the purposes of enhancing the conservation status of great crested newts in England.

5.8 If the Applicant's proposals at the Site are refused planning permission or other essential regulatory consent (including a licence to the Applicant under reg. 55 of the 2017 Regulations) any Conservation Payment(s) made by the Applicant to Natural England pursuant to this Certificate will be repaid in full.

5.9 If following the receipt of planning permission and/or all other essential regulatory consents but prior to the commencement of any works on the Site that could kill or disturb great crested newts or damage or destroy their habitat the Applicant confirms in writing to Natural England that it no longer wishes to proceed with its proposals on the Site any 1st Stage Conservation Payment already made shall be forfeit and any 2nd Stage Conservation Payment already made will be repaid subject to the deduction of such costs as have reasonably been incurred by Natural England or habitat creation contractors on its behalf prior to the receipt by Natural England of such written confirmation. An Applicant who was not required to make staged payments will be repaid any Conservation Payment already made subject to the deduction of such costs as have reasonably been incurred by Natural England or habitat creation contractors on its behalf prior to the receipt by Natural England of such written confirmation. The Applicant acknowledges that Natural England will spend the Conservation Payment in accordance with the provisions of Annex 2 and appreciates that for the purposes of conserving great crested newts it will be reasonable to spend a high proportion of the Conservation Payment within a short period of receiving it.

5.10 If the Applicant only carries out part of the development on the Site and has less impact than that assessed at part 2 of this Certificate it shall be entitled to request Natural England to recalculate the Conservation Payment. Such request shall be in writing and shall contain all the information necessary to allow Natural England to assess the impact of the modified development. If the recalculated Conservation Payment is lower than the Conservation Payment(s) already paid the Applicant shall be entitled to reimbursement of the difference on the following basis: a 1st Stage Payment shall be forfeit; the balance may be repaid from a 2nd Stage Payment subject to the deduction of such costs as have reasonably been incurred by Natural England or habitat creation contractors on its behalf prior to the receipt by Natural England of the request to recalculate; an Applicant who was not required to make staged payments will be repaid the difference subject to the deduction of such costs as have reasonably been incurred

Copyright © Natural England 2020

by Natural England or habitat creation contractors on its behalf prior to the receipt by Natural England of such written request. The Applicant acknowledges that Natural England will spend the Conservation Payment in accordance with the provisions of Annex 2 and appreciates that for the purposes of conserving great crested newts it will be reasonable to spend a high proportion of the Conservation Payment within a short period of receiving it.

5.11 Once signed and dated in section 8, this Certificate shall remain effective for the period of 25 years from the commencement of works on the Site that could kill or disturb great crested newts or damage or destroy their habitat; save that if after two years from the date of this Certificate the Conservation Payment set out at part 4 of this Certificate has not been paid in full Natural England shall be entitled to review and revise the amount of that payment to such sum as at the date of such review is sufficient to pay for the creation and maintenance of sufficient great crested newt habitat to compensate for the impacts of the Applicant's proposals for 25 years. Until signed and dated in section 8 this Certificate is provisional only and if it has been determined that a 1st Stage Conservation Payment is required it will lapse and be of no further effect after 6 weeks from the date given in section 4. If it has been determined that a 1st Stage Conservation Payment is not required this Certificate will lapse and be of no further effect after 3 months from the date given in section 4.

5.12 This Certificate may not be relied on by any person other than the Applicant and may not be assigned to any other person without the prior written consent of Natural England. Natural England's consent will be conditional upon any assignee signing a Certificate in like form to this Certificate, or as appropriate to the circumstances, subject to which consent shall not unreasonably bewithheld.

5.13 Natural England's total liability arising under or in connection with this Certificate, whether in contract, tort (including negligence or breach of statutory duty), misrepresentation, restitution or otherwise shall be limited to the amount of the Conservation Payment paid by the Applicant to Natural England and un-spent as at the date of adjudication of the claim.

5.14 The Applicant's total liability arising under or in connection with this Certificate, whether in contract, tort (including negligence or breach of statutory duty), misrepresentation, restitution or otherwise shall be limited to the amount of the Conservation Payment properly calculable on the basis of the actual development to which this Certificate relates.

5.15 Neither Natural England nor the Applicant shall be liable to the other for any indirect, special or consequential loss or damage or any loss of profits, turnover, business opportunities or damage to goodwill (whether direct or indirect).

5.16 No variation of this Certificate shall be valid unless it is in writing and signed by or on behalf of both parties.

5.17 Nothing in this Certificate shall prejudice, conflict with or affect the exercise by Natural England of its statutory functions (including as statutory consultee), purpose, powers, rights, duties, responsibilities or obligations arising or imposed under any legislative provision enactment, bye-law or regulation whatsoever, nor shall it fetter the exercise of any discretion Natural England mayhave.

5.18 Natural England may terminate this Certificate immediately on notice in writing where, in Natural England's reasonable opinion, compliance with the obligations in this Certificate is likely to conflict with Natural England's statutory functions (including as statutory consultee), purpose, powers, rights, duties, responsibilities or obligations.

5.19 The Applicant acknowledges that Natural England is subject to the requirements of the Freedom of Information Act 2000 and the Environmental Information Regulations 2004 (both as amended) and cannot guarantee confidentiality. The Applicant shall assist and co-operate with Natural England as necessary to comply with these requirements. In responding to a request for information, including information in connection with the subject matter of this Certificate Natural England shall where in its absolute discretion it deems necessary use reasonable endeavours to consult with the Applicant. Notwithstanding this the Applicant acknowledges that Natural England may disclose information without consultation, or following consultation with the Applicant having taken its views into account.

5.20 The Applicant shall ensure that all information produced in connection with the subject matter of this Certificate or relating to this Certificate is retained for disclosure and shall provide all necessary assistance as reasonably requested to enable Natural England to respond to a request for information within the time for compliance and shall permit Natural England to inspect such records as requested from time to time.

5.21 Nothing in this Certificate is intended to, or shall be deemed to, constitute a partnership or joint venture of any kind between Natural England and the Applicant. No party shall have authority to act as agent for, or to bind, the other party in any way.

5.22 The parties do not intend any term of this Certificate to be enforceable by virtue of the Contracts (Rights of Third Parties) Act 1999 by any person that is not a party to it.

Copyright © Natural England 2020

5.23 This Certificate and all disputes or claims arising out of or in connection with the activities of the parties in connection with it shall be governed by and construed in accordance with the law of England.

6. Declarations

This Declaration may only be signed by either:

- A director or senior authorised employee of the corporate Applicant identified at 1 (a), above; **or**
- The person identified at 1 (b), above, as the individual Applicant; **or in either case:**
- A person authorised in writing by the Applicant to complete this Enquiry Form and to make this Declaration. Any such written authorisation must identify the site and development concerned and be irrevocable.

The Applicant declares as follows:

- **All of the information provided by the Applicant to enable Natural England to produce this Certificate is up to date, complete and correct;**
- **All of the information provided by the Applicant in the District Level Great Crested Newt Licence Enquiry Form dated:** 18/05/2022 **is up to date, complete and correct;**
- **The terms and conditions contained within this Certificate are agreed and accepted.**

Hi [redacted]

I agree at this late stage, and given that you have spring and summer data a transect survey now is unlikely to significantly change the results you already have. Do you have the name and address of the site so I can put this on our files?

Kind regards

[redacted]

Subject: RE: Autumn Bat Transect

Hi [redacted]

Thanks for your response. To be clear, I am referring to bat habitat/transect surveys and not

emergence surveys. Under the BCT guidelines 'low' suitability habitat requires a spring, summer and autumn transect survey to assess the use of habitat by commuting and foraging bats. Under autumn, the final month is considered as October. See Table 8.3 for further detail.

Our spring and summer transect surveys have identified small numbers of common bats using the site. Since, the developer has put a hold to the project and I was considered that GMEU may wish to see data from an autumn transect also. My personal opinion is that we have sufficient data and that an autumn/October survey will not change the results in any significant way, however, I am concerned that GMEU may wish to see this data and could potentially object without it.

All of our bat roost assessment surveys were completed during the appropriate times of year, with no constraints.

Please do call me if you wish to discuss further.

Best wishes,

[redacted]

Hi [redacted]

We would consider it too late in the season to carry out a bat transect.

Kind Regards

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Dear Recipient,

Following on from my previous email, please find attached documents to accompany the submission of a planning application for Land at Astley Park Way under the application number A/23/96226/DCINV, following a letter of invalidation received today. Due to attachment size limits within outlook the documents will be sent, split across several emails.

This email contains documents which were submitted without a scale bar, the documents have now been amended to contain a scale bar, these documents are listed below:

Tree Constraints Plan (Sheet 1 of 2)
Tree Constraints Plan (Sheet 2 of 2)
Tree Protection, Retention & Removal Plan (Sheet 1 of 2)
Tree Protection, Retention & Removal Plan (Sheet 2 of 2)
Landscape Cross Sections

Kind Regards,

REFER TO BB TREES LTD PRE DEVELOPMENT TREE SURVEY REF: 711-22
DATE: 29TH JULY 2022.

TREE LOCATIONS SHOWN ARE BASED ON INFORMATION PROVIDED BY TOWER SURVEYS ASSOCIATES

THIS DRAWING HAS BEEN PREPARED IN ACCORDANCE WITH BS5837:2012.

KEY

T19 — **CATEGORY A (GREEN) TREES**
Trees of high quality with an estimated remaining life expectancy of at least 40 years

T20 — **CATEGORY B (BLUE) TREES**
Trees of moderate quality with an estimated remaining life expectancy of at least 20 years

T13 — **CATEGORY C (GREY) TREES**
Trees of low quality with an estimated remaining life expectancy of at least 10 years, or young trees with a stem diameter below 150 mm

T8 — **CATEGORY U (RED) TREES**
Those in such a condition that they cannot realistically be retained as living trees in the context of the current land use for longer than 10 years

G8 — **REFERS TO GROUPS OF TREES**

REFERS TO HEDGES

ROOT PROTECTION ZONE:
Area of hatching around protected trees indicates the minimum Root Protection Area required in accordance with **BB TREES LTD** Arboricultural Analysis dated **29/07/2022.**

DUE DILIGENCE GROUND INVESTIGATION REPORT
ASTLEY PARK WAY, WIGAN

1 INTRODUCTION

1.1 Engagement of Discovery CE Limited

Discovery CE Limited (DCE) was instructed by BE DESIGN LIMITED on behalf of Peel L&P Developments Ltd to carry out a Due Diligence Ground Investigation at a site known as ASTLEY PARK WAY, WIGAN.

The offer to carry out the works is contained in DCE proposal reference 21311J-Q-001 dated 12th November 2021 and the instruction to proceed with the work was contained in an email from BE Design Limited dated 20th January 2022.

1.2 Objectives and Limitations

This report follows-on from the DCE Desk Study 21133J entitled “Desk Study and Preliminary Risk Assessment Astley Park Way, Wigan” dated 5 May 2022, which has been used to facilitate the planning and execution of the due diligence ground investigation.

The overall objectives of the work presented in this report were to carry out a geotechnical due diligence ground investigation to gather geological, geotechnical and environmental data to allow an initial assessment to be completed of the underlying ground conditions at the site with respect to geotechnical and contaminated land issues relevant to the proposed development.

The scope of works focuses on the shallow mine workings undertaken in the Pennine Middle Coal Measures Formation, identification of any contamination of near surface soils, together with a broad assessment of geotechnical conditions for earthworks and foundation considerations. Specifically, the objectives were to:

1. Carry out an intrusive investigation to identify the general near surface geological conditions beneath the subject site;

2. Carry out in-situ and laboratory testing to allow assessment of the geotechnical conditions beneath the site;

3. Assess the likely magnitude and extent of potential Contaminants of Concern identified in the desk study or from field observations in both soil and groundwater;

4. Record gas and groundwater conditions to refine, if necessary, the Conceptual Site Model;

5. Provide an interpretation of the geotechnical data recovered and present recommendations for foundation design, ground treatment, floor slab and pavement design and conditions with respect to chemical attack on buried concrete;

6. Provide conclusions and recommendations for further work if considered necessary.

The Due Diligence assessment will need to be supplemented with a full geotechnical assessment in response to the outcome of this report.

The conclusions and recommendations provided in this report are based on the conditions encountered at the exploratory hole locations and intrusive work has been restricted to the level of detail considered necessary to achieve the stated objectives. The possibility of significant variations occurring between exploratory holes cannot be discounted and additional assessment may be necessary should such variations be revealed after preparation of this report.

1.3 Sources of Information

The following sources of information have been used in the preparation of this report.

1. DCE report ref 21133J dated 5th May 2022 entitled “Desk Study and Preliminary Risk Assessment Astley Park Way, Wigan”;
2. The Coal Authority, Ref DCE-8475352, “Consultants Coal Mining Report”, 27th January 2022;
3. pHp architects, Ref WIG-PHP-00-00-DR-A-4557-001-P3, “Land at Astley, Wigan, Manchester”, August 2021;
4. LK Consult Ltd, Ref LKC 18 113 “Land at Garrett Hall Farm Tyldesley, Overarching Phase 2 Geo-Environmental Investigation and Risk Assessment and Remediation Strategy”, 19th December 201;.
5. LK Consult Ltd, Ref: LKC 14 1200 CMRA Phase 1, “Land at Chaddock Lane-Desk Based Coal Mining Risk Assessment”, 16th September 2014;
6. LK Consult Ltd, Ref LK 14 1200, “Chaddock Lane Astley Phase 1 Preliminary Risk Assessment”, 7th August 2015;
7. BE Design, Astley Indicative Levels+ Cut +Fill 1:500, November 2021;
8. Peel L&P, Land at Astley Business Park 1:2500, 9th July 2021; and
9. British Geological Survey (BGS) sheet No. 085 Manchester 1:50 000, Solid Edition.

SITE DESCRIPTION

1.4 On site

The site is located approximately 8 km to the south of Bolton on a parcel of land located off Chadlock Lane, Tyldesley, Manchester and is centred at an approximate National Grid Reference (NGR) 370867,401177 (Appendix A1). The site occupies a parcel of land approximately 12.5 Hectares (ha) and is largely level at c. 35 m Above Ordnance Datum (AOD).

The site is divided into six portions primarily by hedgerows, and is used by the general public with footpaths and bridleways going through site as shown within Appendix B. The site is bordered by housing estates to the north, east and west (Plate 1), with the Swain Trucking Depot present along the south-western boundary. The southern boundary comprises of Chaddock Lane and Applewood Farm Dining and Carvery (Plate 2).

Plate 1: Typical view of north, east and west site boundary.

Plate 2: Southern site boundary

Primary access to the site is off of Astley Park Way on the southern boundary, at the time of the site visit however, Heras fencing and concrete barricades prevented vehicular access at this point (Plate 3). A secondary access point was also identified which was located to the north-eastern corner of site, off of Garrett Hall Road.

Plate 3: Primary access to site, southern boundary.

The northern and north-western section of site comprised large fields which were primarily used as a public open space, with gravel footpaths extending along the northern and eastern borders (Plate 4).

Plate 4: Northern section of site, facing north-east.

The south-western section of site was formed of hummocky shrubland with dense vegetation in parts and a large pond in the south-western corner. Ground conditions were noted during the site visit to be to be wet. A pile of tyres was noted along the southern boundary of the south-western section (Plate 5).

Plate 5: Pile of tyres noted along the southern boundary of the south-western section.

A disused tarmacadam covered road forming a junction along with associated streetlights, an old disused electrical box and associated drainage was noted across the central portion of the site extending from Chaddock Lane to the south (Plate 6). Fly tipped waste thought to be construction waste was also noted on the eastern side of the junction (Plate 7).

Plate 6: The disused junction within the centre of site, facing east.

Plate 7: Fly tipping on the eastern side of the disused junction, facing south-east.

The south-eastern section of the site also formed open space comprising hummocky and water logged ground, with previous ground work evident by vehicle tracks and a stockpile of unknown material and (Plate 8). This section of the site also has a large fenced off pond on the southern border forming a balancing pond to receive discharged water from storm drains.

Plate 8: South-eastern section of site.

The site walkover also identified a gas pipeline to be present on site, leading in from the southern border of site adjacent to Applewood Farm Carvery, through the centre and out through the northern border of site, confirming the route shown within the plan included as Figure 1.

1.5 Development Proposal

It is understood that the site will be used for the construction of 4 No. industrial plot, each inclusive of warehouses and office space, parking, associated hardstanding yard areas and green open

space. The proposed development layout is shown in Figure 1 below which includes the total site (Blue line).

Figure 1 Proposed Development Layout

2 GEOLOGY AND HYDROGEOLOGY

2.1 Geology

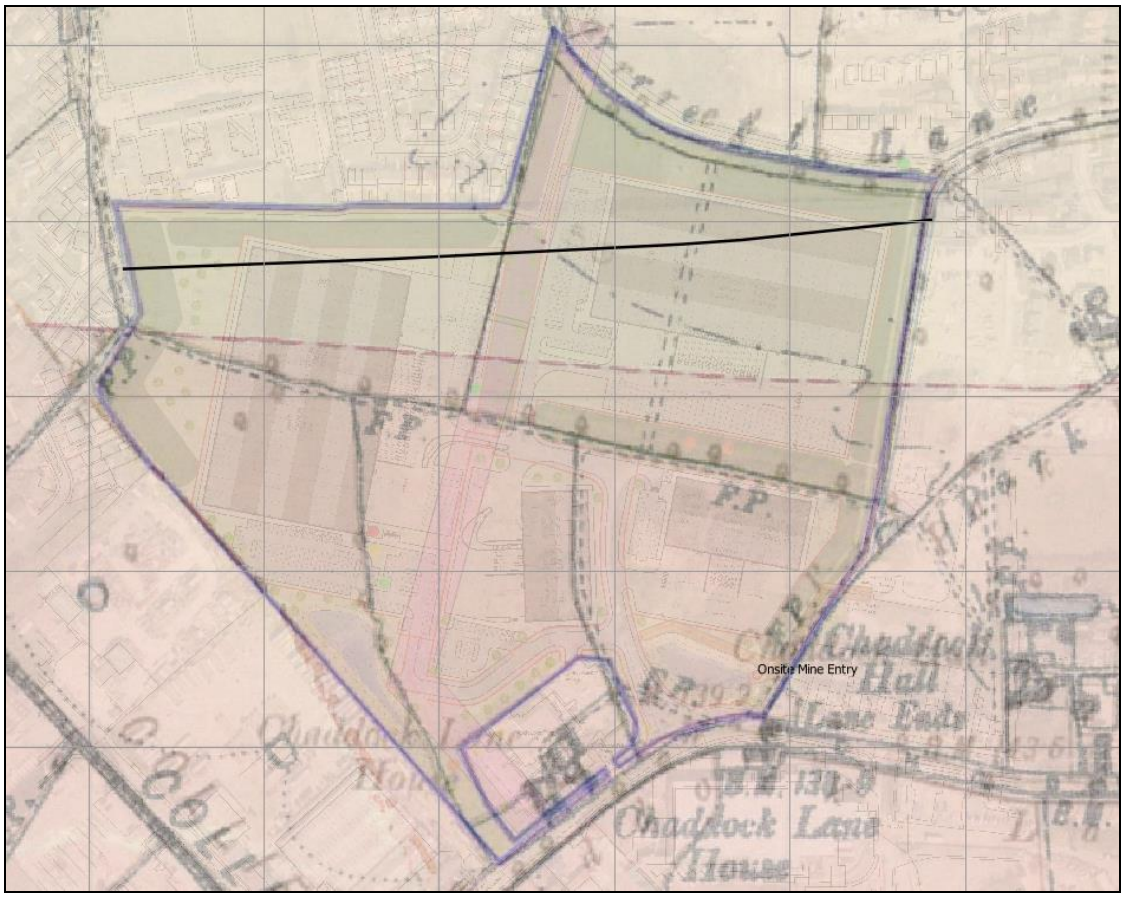
The geology at the site is indicated by the British Geological Survey (BGS) online digital mapping database and BGS sheet no 085 (1:50 000, Solid Edition), to comprise superficial deposits formed of Till, Diamicton.

The solid geology at the site is indicated to comprise primarily Pennine Middle Coal Measures Formation, described as mudstone, siltstone and sandstone. The Newton Heath Sandstone is indicated to underlie the far south-western tip of the site along the southern boundary.

2.2 Mining Risk

Based on a review of the information available a mining risk assessment has been carried out and summaries on Table 2.

Table 1 Mining Risk Assessment



Coal Mining Issue	Yes	No	Risk Assessment
Underground coal mining (recorded at shallow depths)	✓		An abandoned mine plan and coal authority records confirm workings at shallow depths in the Worsley Four Foot Mine coal seam. SI proposed to assess risks. The seam subcrop is mapped towards the northern boundary striking east-west and dipping 11.3 degrees (Appendix E).
Underground coal mining (probable at shallow depths)	✓		Expected across the majority of the northern part of the site. Further assessment required. SI proposed to assess risks.
Mine entries (shafts)	✓		1 No. mine entry present on southern boundary with no treatment details, Conveyance-18-DEC-2009 to Peel Investments (North) Limited. Further investigation proposed during detailed SI. 2 No. shaft immediately beyond southern boundary and 4 No. offsite to the west on down throw side of fault. Treatment details indicated in Appendix E.
Coal mining geology (fissures)		✓	The Coal Authority is not aware of any evidence of damage arising due to geological faults or other lines of weakness that have been affected by coal mining.
Record of past mine gas emissions or potential		✓	The Coal Authority has no records of mine gas emissions from the land at the subject site or from land nearby. Given the mining history locally gas monitoring will be undertaken as part of site investigation
Recorded coal mining surface hazard		✓	The Coal Authority has no records of coal mining subsidence at the site. There is a very low risk to the proposed development from workings collapse.
Surface mining (opencast workings)		✓	There are no opencast records of mining on the subject site

The Worsley Four Feet, reported to dip 11.3 degrees in a southerly direction is mapped to be a sub-crop in the northern quarter, striking east to west. The Coal Authority has identified 1 No. abandonment plan for the subject site that indicates Shallow Coal Workings to have occurred and nearer the subcrop 'Probable Shallow Coal Workings', as shown in Figure 2 below. The 'actual' and

'potential' workings in the shallow Worsley Four Foot coal seam could pose a potential ground stability risk; also refer to Section 4.4.

The Coal Authority report states that deeper seams have been worked to 810 m beneath the site it is likely all these coal measures have been worked.

Figure 2 Recorded Shallow Coal Mine Workings (subcrop shown in black east to west)

Investigation is required to identify the shallower parts of the seam for this initial due diligence assessment for development purposes and to establish the need to grout worked seams.

A former mineshaft is located close to the southern boundary though its treatment details are not known; conveyance recorded 18-Dec-2009 to Peel Investments (North) Limited. Site investigation and assessment of the risks posed by the mine shaft is expected to be part of consultation with the Coal Authority and a detailed investigation.

Although no artificial deposits or Made Ground are indicated by the Groundsure report to be present at the site it is considered likely that artificial deposits and/or Made Ground may be present due to the presence of a new road spur (hammer head) and observed evidence of earthworks and

stockpiles. The stockpiles present have been subject to limited shallow trial pit excavation after being directed to do so by BE Design Ltd, though this has been limited to the appraisal of ground conditions by logging only. It is also understood that a license was issued to adjacent developers to fill the subject site with up to 8000 m^3 of material and so there is the potential for additional Made Ground to be present in the Northern part of the site.

3 FIELDWORK & LABORATORY TESTING

3.1 Fieldwork

The fieldwork was carried out in general accordance with BS5930 (2015) and comprised the works summarised in Table 2. Fieldwork positions are given in DCE drawing No. 21133J-01-01 in Appendix B. Details of the fieldwork methodology is presented in Appendix C with full fieldwork records presented in Appendix D.

Table 2 Fieldwork Undertaken

Works	Objectives
8 No Rotary Cored boreholes: RC101-RC109	To provide detailed rock descriptions to aid the determination of the condition of underlying coal measures, including possible worked seam, nominally between 10 – 25 m depth. To allow recovery of representative rock core samples for laboratory testing. Installation of groundwater monitoring wells.
1 No rotary open holes: ROH201	To identify the underlying geological strata boundary and to allow the determination of the depth to the coal seam. Installation of groundwater monitoring wells.
9 No cable percussion boreholes: CP401-CP409	To investigate near surface Made Ground, Glacial Deposits and depth to rockhead, carrying out insitu and lab testing also to characterise the geotechnical conditions beneath the site.
Excavation of 24 Trial Pits: TP301- TP318, TP501 to TP507.	To investigate specific areas to assess depth and nature of Made Ground (or stockpiled materials TP501-TP507)
Gas and Groundwater monitoring and sampling	Monitoring of boreholes including groundwater sampling up to potentially 6 month period to provide data to characterise contaminant status and its variation over time and spatially and allow gas conditions to be characterised.

3.2 Geotechnical Laboratory Testing

A programme of geotechnical laboratory testing has been carried out in accordance with BS1377 (1990) “Methods of Tests for Soils for Civil Engineering Purposes” at a UKAS registered testing laboratory. The tests listed below were carried out and the results are presented in Appendix E.

Table 3 Geotechnical Laboratory Testing

BS1377 Ref	Test Description	Number of tests
Part 2 Section 3	Moisture Content	29
Part 2 Sections 4 & 5	Atterberg Limit Determination	23
Part 2 Section 9	Particle Size Distribution	1
Part 3 Section 4	Loss on ignition	1
Part 4 Section 4	Rammer Compaction (2.5 kg)	7

3.3 Chemical Laboratory Testing

Chemical testing has been carried out on selected samples for determinands based on the identified Contaminants of Concern listed below. Note that the suite of testing varies according to the COCs relevant for the particular exploratory hole location.

The list of COCs identified includes Arsenic, Cadmium, Chromium, Chromium VI, Copper, Nickel, Lead, Zinc, Mercury, Selenium, Vanadium, Boron, Asbestos, pH and Soluble Sulphate (2;1).

Soil samples were recovered in amber glass jars and/or 1 - 2 kg plastic tubs as advised by the testing laboratory. Where samples were recovered for hydrocarbon analysis, the boreholes were first micro purged and samples recovered into amber glass bottles or containers as specified by the testing laboratory. All samples were stored in temperature controlled conditions (<4°C) once collected and during despatch to the laboratory

Chemical Laboratory testing for soils was carried out using MCERTS accredited tests whenever possible failing this UKAS and/or ISO17025 accredited tests were used. For water samples UKAS and/or ISO17025 accredited tests were used. Details of the accreditation status for specific tests are presented on the laboratory analysis report sheets.

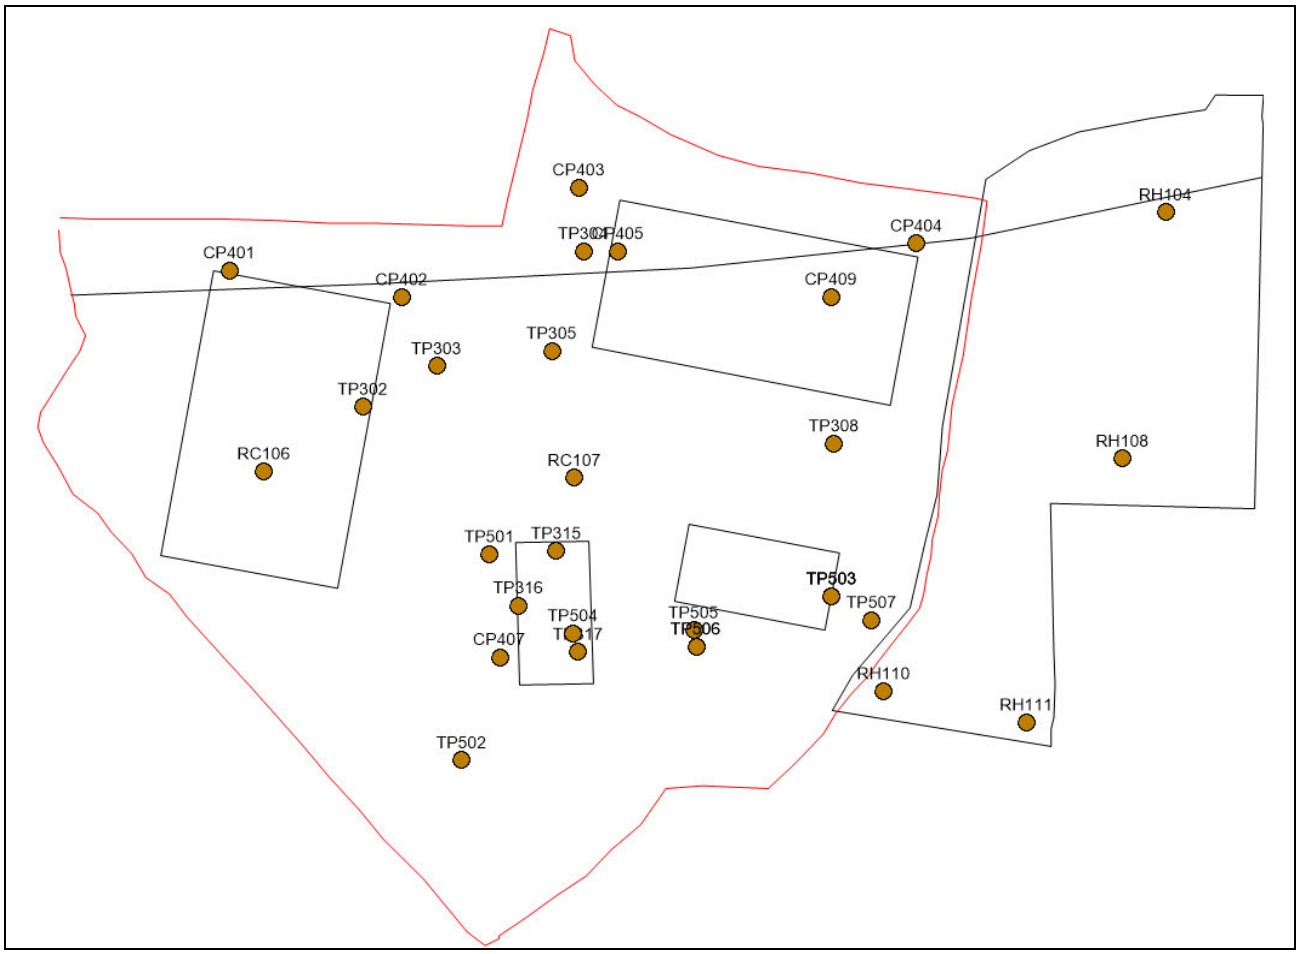
A total of 21 No. soil samples were analysed during this investigation, the results of which are presented in Appendix F. Groundwater was intermittently encountered and samples will be retrieved as part of the ongoing monitoring of gas and groundwater conditions.

4 GROUND AND GROUNDWATER CONDITIONS

4.1 Ground Conditions and Material Properties

The ground conditions at the site were in general accordance with those anticipated from the geological mapping and included Topsoil, localised Made Ground overlying Glacial Till Deposits and or Weathered Pennine Middle Coal Measures Formation which in turn were found to overlie Pennine Middle Coal Measures Formation. A summary of the ground conditions encountered in presented in Table 4 below with further discussion presented in the following sections.

Table 4 Summary of Ground Conditions



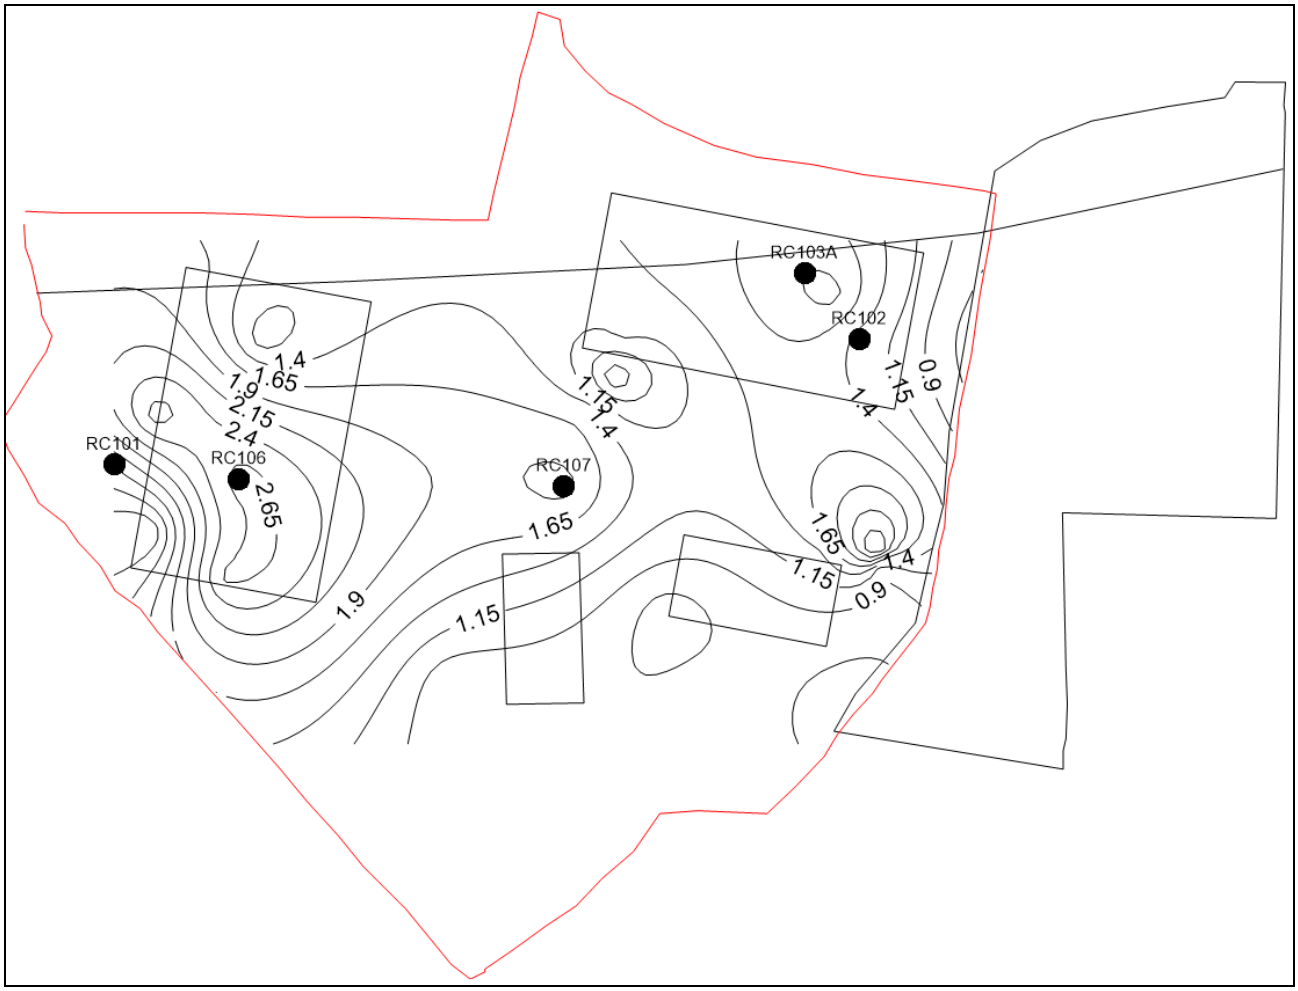
Strata & General Description	Depth Encountered (m bgl)	Thickness Range (m)
1 TOPSOIL Very soft and soft dark brown and dark grey slightly sandy CLAY with occasional to frequent rootlets.	Absent to 0.4	0.0 to 0.4
2 MADEGROUND Firm and stiff brown and grey CLAY with rare glass, plastic, ceramic and metal fragments, gravels of brick, concrete, coal and sandstone and cobbles of concrete and brick. Locally black woven geotechnical membrane between 0.25 and 0.5 m bgl. NOTE – Possible re-engineering of Glacial Deposits has occurred with Colliery waste in NW quarter of site - refer to RC101, RC106 and TP214 for example	Absent to 2.82 Generally Absent to 1.37 m	0.0 to 2.82
3 GLACIAL TILL DEPOSITS Firm dark grey mottled brown CLAY with rare cobbles of quartzite and gravels of chert, quartzite, sandstone and coal. AND Brown mottled grey fine and medium SAND with occasional pockets of clay.	0.1 to 2.7	0.6 to 4
4 WEATHERED PENNINE MIDDLE COAL MEASURES FORMATION Firm brown mottled grey CLAY/SILT with gravels of coal, siltstone, mudstone and sandstone and rare gravel sized lenses of sand, black gravel sized carbonaceous inclusions and gravel sized mudstone lithorelicts. AND Black sandy GRAVEL of coal.	0.9 to 4.8	0.2 to 3.4
5 PENNINE MIDDLE COAL MEASURES FORMATION Extremely weak becoming strong grey MUDSTONE locally interlayered with very weak to strong brown and grey SILTSTONE, strong grey SANDSTONE and medium strong black COAL. AND Strong dark grey MUDSTONE with occasional to frequent coalified plant fragments and locally interlayered strong and very strong grey SILTSTONE and medium strong black COAL.	0.7 to 5.3	>19.5

4.2 Topsoil

Topsoil was encountered across the north-western and central thirds of the site at ground level and was found to generally be between 0.1 and 0.4 m thick; the locations where it was recorded at 21 No. of 51 No. total investigation positions as shown on Figure 3.

Topsoil comprises a very soft and soft dark brown and dark grey slightly sandy CLAY with occasional to frequent rootlets. Due to the limited thickness of Topsoil, no in-situ testing was undertaken.

Figure 3 Topsoil Occurrence



4.3 Made Ground

Made Ground was encountered across the site varying in thickness between 0.2 m and 2.82 m locally; the locations where it has been provisionally identified at 26 No. of 51 No. total investigation positions as shown on the figure below.

It is understood that filling took place from a neighbouring development, though no details of it are available.

It is important to recognise that a good proportion of the site appears to have been filled by both anthropogenic materials mixed with natural Glacial Deposits and weathered Pennine Middle Coal Measures and some areas appear on their own to be re-worked natural materials that may have been compacted in-place. No record of this 'filling' has been provided during the current investigation.

Figure 4 Provisional Assessment Made Ground thickness (on site)

The Made Ground was predominantly cohesive derivations of either Glacial Deposits or weathered Pennine Middle Coal Measures (firm brown and grey slightly gravelly slightly sandy CLAY) together with variable content of anthropogenic gravels of:

1. brick, concrete, coal, granite, white pottery, glass, colliery spoil (coal ash and gravel), ceramic, plastic, wood and metal fragments, fibrous dark brown PEAT with frequent logs and roots, geotechnical membrane and clinker.

Granular Made Ground was found sporadically (RC101, RC108, TP306 and TP314) comprising clayey fine SAND, of coal, mudstone.

The Made Ground where present is also shown in cross sections A-A', B-B', C-C' in Appendix B.

Standard Penetration Testing (SPT) undertaken within the Made Ground returned SPT N values of between 4 and 50 for the cohesive deposits, indicating this material is very soft to very stiff though on average is firm.

A summary of the results of laboratory testing are presented in Table 5 and in full in Appendix E.

Table 5 Summary of DCE geotechnical laboratory tests – cohesive Made Ground

	No. of Tests	Units	Minimum	Maximum
Moisture Content	6	%	20	40
Liquid Limit	5	%	45	67
Plastic Limit	5	%	18	28
Plasticity Index	5	%	21	39
Optimum Moisture Content	1	%	19	19
Maximum Dry Density	7	Mg/m^3	1.64	1.64

Based on the laboratory testing carried out on the cohesive Made Ground and summarized above, it is of medium volume change potential and may be considered predominantly non-frost susceptible, with localized frost susceptible areas.

Granular Made Ground may be considered predominantly frost susceptible though where present is mainly below 1.3 m depth, with localized non-frost susceptible areas.

A single compaction test indicates an optimum moisture content of 19 % and Maximum Dry Density of 1.64 Mg/m^3. Moisture contents ranging from 20% to 40% and an average of 30% suggest that moisture conditioning will be required where Made Ground is proposed for earthworks structural filling purposes.

The earthworks properties of the Made Ground materials are discussed further in Section 9.

4.4 Poor Sample Recovery Conditions Immediately below Made Ground

The following table identifies those locations where rotary boreholes identified poor recovery and so implies softer zones at the base of Made Ground at the interface of either Glacial Till Deposits or Pennine Middle Coal Measures, and are largely concentrated within about 100 m wide corridor south of the conjectured Worsley 4 foot subcrop. Such poorer materials will need to be assessed further to determine their extent so that a decision can be made regarding their treatment by grouting or by ground improvement. The further assessment can be achieved by trial pits and shallow cable tool boreholes, though there may be an opportunity to use CPTs or dynamic probing.

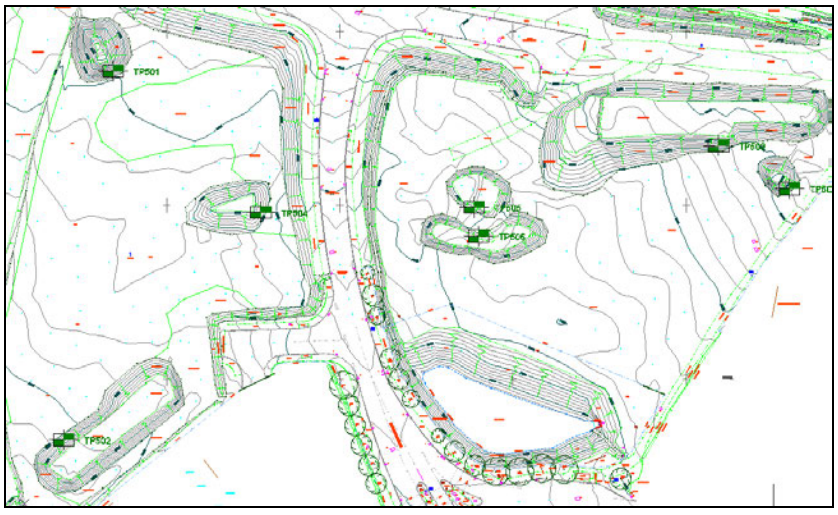


Table 6 Poor Sample Recovery Conditions Immediately below Made Ground

PointID	Depth	GEOL BASE	THICKNESS	Poor recovery base depth	GEOL_DESC
RC101	3	4.87	1.87	4.5	Black sandy clayey angular to subrounded fine to coarse GRAVEL of mudstone and coal. Sand is medium and coarse. (PROBABLY PENNINE MIDDLE COAL FORMATION) Note: Poor recovery between 3.3 - 4.5 m bgl. Drillers noted: "Very little resistance on drill head possibly worked coal seam onto a grey clay."
RC102	3.75	4.5	0.75	4.5	Grey clayey angular fine and medium GRAVEL of mudstone. (PROBABLY PENNINE MIDDLE COAL MEASURES FORMATION) Note: Poor recovery between 3.9 - 4.5 m bgl.
RC103A	1.9	3	1.1	3	Stiff grey slightly gravelly slightly sandy CLAY. Gravel is angular fine and medium of mudstone. (POSSIBLE GLACIAL TILL DEPOSITS) Note: Poor recovery between 2.2 - 3.0 m bgl.
RC106	4.8	5	0.2	5	Black slightly clayey angular fine and medium GRAVEL of coal, mudstone and siltstone. (POSSIBLY PENNINE MIDDLE COAL MEASURES FORMATION) Note: Poor recovery.
RC107	3.2	4	0.8	4	Weathered grey MUDSTONE. (WEATHERED PENNINE MIDDLE COAL MEASURES FORMATION) Recovered as: Firm brown slightly gravelly and gravelly slightly sandy CLAY. Gravel is angular fine to coarse of mudstone and coal. Note: Poor recovery between 3.6 - 4.0 m bgl.

4.5 Stockpiles - Made Ground

A total of 7 No. shallow trial pits were undertaken in the south and south-eastern parts of the site at the request of BE Design at the end of the due diligence fieldwork. The locations of the trial pits are shown below.

Figure 5 Stockpile Areas of Made Ground

The current work comprises a limited appraisal based on logging descriptions only. The area and volume have been determined from the topographical evidence and the BED Formation model provided.

4.5.1 TP501 (300 m^2 plan area, 460 m^3 estimate to BED Formation)

MADE GROUND: Firm dark brown slightly gravelly slightly sandy CLAY with low cobble content. Sand is medium and coarse. Gravel is angular to rounded fine to coarse of quartzite, coal, chert and brick. Cobble is angular and subangular of brick and concrete.

4.5.2 TP502 (840 m^2 plan area, 640 m^3 estimate to BED Formation)

MADE GROUND: Soft to firm grey and brown slightly gravelly slightly sandy CLAY. Gravel is angular fine to coarse of brick and concrete. Sand is medium and coarse.

4.5.3 TP503 (2500 m^2 plan area, 7400 m^3 estimate to BED Formation)

MADE GROUND: Soft dark grey slightly gravelly slightly sandy CLAY with rare boulder of concrete and low cobble content. Sand is fine to coarse. Gravel is angular fine to coarse of brick and chert. Cobble is angular of brick.

MADE GROUND: Firm dark brown slightly gravelly slightly sandy CLAY with rare ceramic fragments and low cobble content. Sand is fine and medium. Gravel is angular fine to coarse of chert and brick. Cobble is angular of brick and concrete.

MADE GROUND: Soft brown slightly gravelly CLAY with occasional ceramic fragments and roots . Gravel is angular to subrounded fine to coarse of brick, chert, quartzite and coal.

4.5.4 TP504 (830 m^2 plan area, 230 m^3 estimate to BED Formation)

MADE GROUND: Firm dark grey locally orange-brown and grey slightly gravelly slightly sandy CLAY with low cobble content. Gravel is angular fine to coarse of brick, chert, mudstone and coal. Cobble is angular of brick. Sand is medium and coarse.

4.5.5 TP505 and TP 506 (650 m^2 plan area, 1100 m^3 estimate to BED Formation)

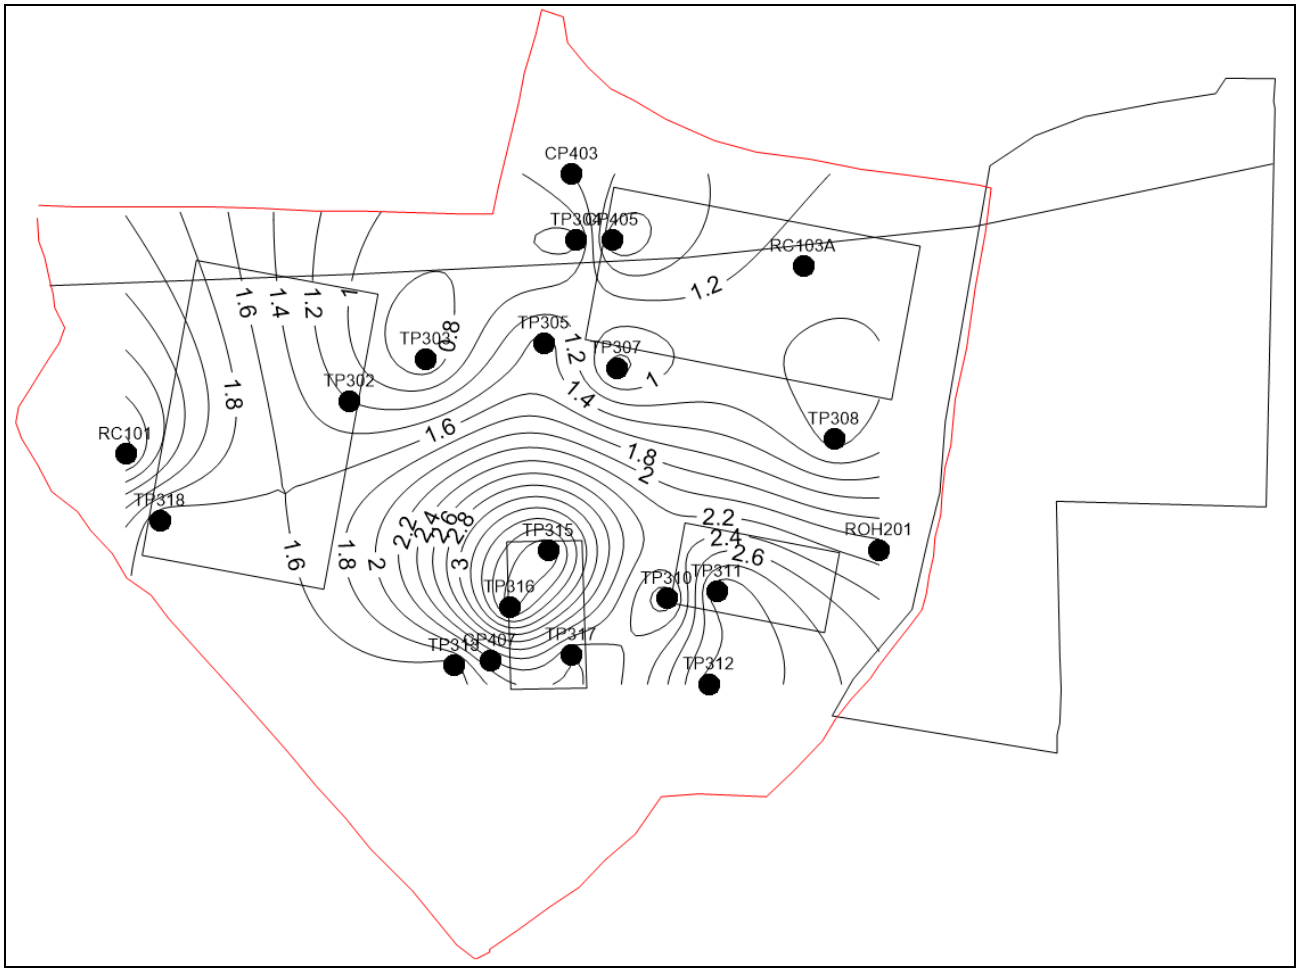
MADE GROUND: Soft becoming firm brown mottled slightly gravelly CLAY with low cobble content and rare ceramic and glass fragments. Gravel is angular to subrounded fine to coarse of quartzite, chert, coal and sandstone. Cobble is subangular of brick.

MADE GROUND: Soft dark brown sandy CLAY with rare cinderblock, glass, plastic, ceramic and wood fragments. Sand is fine and medium.

MADE GROUND: Soft dark grey slightly gravelly slightly sandy CLAY with rare plastic fragments. Sand is medium and coarse. Gravel is angular fine to coarse of brick and chert.

4.5.6 TP507 (62 m^2 plan area, 127 m^3 estimate to BED Formation)

MADEGROUND: Soft dark grey slightly gravelly sandy CLAY with rare ceramic, metal and glass fragments. Gravel is angular of brick. Sand is fine to coarse.



4.5.7 Summary of Stockpile Materials

The materials present in the stockpiles appears to be both Made Ground and of Glacial Deposits or weathered Pennine Middle Coal Measures, and so is representative of those conditions found elsewhere on side. The re-use of all these materials for structural earthworks purposes will therefore need to consider their current moisture condition and whether the materials are to be screened and moisture conditioned beforehand. Further investigations will be needed to characterise the stockpiles in more detail for the nature of that treatment to be identified, though for the current appraisal it should be assumed that all materials in the stockpiles will need treatment by moisture conditioning, given that they are stockpiles that do not appear to have been placed, managed and sealed against the weather.

4.6 Glacial Deposits

Glacial Deposits were encountered across the subject site between 0.1 and 2.7 m depth and between 0.6 and 4 m thickness with an average of 1.9 m thickness, as shown in Figure 6.

Figure 6 Provisional Glacial Deposits thickness (on site)

The Glacial Deposits generally comprised firm to very stiff brown mottled grey slightly gravelly slightly sandy CLAY. Gravel is angular and subangular fine and medium of coal, quartzite and mudstone and black gravels sized carbonaceous inclusions. Gravel is angular and subangular fine and medium of coal and quartzite.

Occasionally (RC107) the Glacial Deposits comprise a soft brown mottled grey slightly sandy CLAY.

The Glacial Deposits are also shown in cross sections A-A', B-B', C-C' in Appendix B.

Standard Penetration Testing (SPT) undertaken returned SPT N values of between 4 and 37 though the lower value(s) are not typical and an average SPT N value of 25 (very stiff) is more representative.

A summary of the results of laboratory testing are presented in Table 5 and in full in Appendix E.

Table 7 Summary of DCE geotechnical laboratory tests – cohesive Made Ground

	No. of Tests	Units	Minimum	Maximum
Moisture Content	9	%	18	58
Liquid Limit	8	%	27	75
Plastic Limit	8	%	14	31
Plasticity Index	8	%	7	44
Optimum Moisture Content	4	%	15	18
Maximum Dry Density	4	Mg/m^3	1.51	1.70

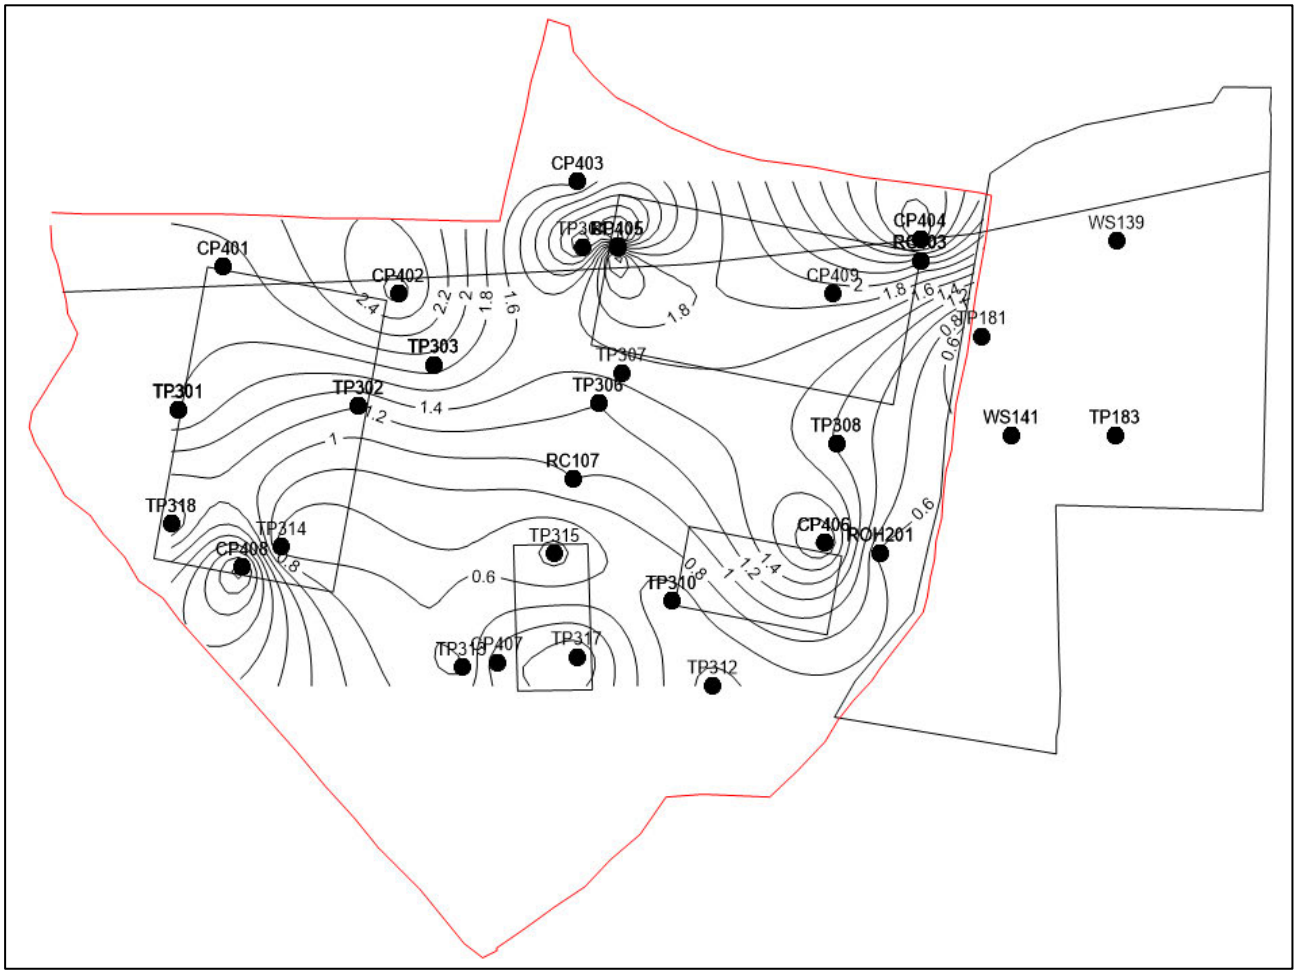
Based on the laboratory testing carried out the Glacial Deposits are mainly of medium volume change potential, with localized exceptions (PI 7% and 44%) indicating low and a high-volume change potential. Such conditions are currently considered to be outliers, though will need to be confirmed by further investigation.

4 No. compaction tests indicate an average optimum moisture content of 16 % and average Maximum Dry Density of 1.63 Mg/m^3. Moisture contents ranging from 18 % to 58 % suggest moisture conditioning will be required. However, just 1 No. moisture content at 0.4 m depth at TP304 skews the overall average, and by removing it from the dataset the average is 18 % and within an acceptable range for compaction without treatment. The isolated high moisture content result does indicate that moisture content can increase quickly as a result of inclement weather.

The earthworks properties of the Glacial Deposits are discussed further in Section 9.

4.7 Weathered Pennine Middle Coal Measures (Boundary at Extremely Weak)

The underlie the superficial deposits, site-wide and were found in the cable tool boreholes recovered as soft (from the upper shallow depths) to very stiff greyish brown and yellow slightly gravelly slightly sandy CLAY with low cobble content and occasional gravel sized pockets of sand. Gravel is angular fine and medium of mudstone and sandstone. Cobble is angular of sandstone.



The weathered Pennine Middle Coal Measures (WPMCM) were also found to include:

1. Fine and medium gravel of mudstone, sandstone and siltstone;
2. Very weak highly weathered coal; and
3. Rare pockets of orange gravel sized sand.

The boundary to the Pennine Middle Coal Measures stratum to the 'rock' interface has been defined as the rock strength approaching 'Extremely Weak' and it is this boundary that determines the start of the 'cover' for grout depth calculations.

The weathered Pennine Middle Coal Measures were encountered across the site between 0.1 and 2 m depth and between 0.4 and 2.26 m thickness with an average of 1.37 m thickness, as shown Figure 7.

Figure 7 Weathered Pennine Middle Coal Measures thickness

SPT testing undertaken within the Weathered Pennine Upper Coal Measures returned SPT N values of between 4 and 375 (extrapolated), though the lower values at shallow depth and the high values at the transition point with rockhead.

Laboratory geotechnical testing was undertaken on 14 No. samples of the WPMCM, the results of which are summarised in Table 8.

Table 8 Summary of DCE geotechnical laboratory tests – Weathered PUCM

	No. of Tests	Units	Minimum	Maximum
Moisture Content	14	%	13	29
Liquid Limit	12	%	37	62
Plastic Limit	12	%	14	24
Plasticity Index	12	%	23	41
Optimum Moisture Content	2	%	18	18
Maximum Dry Density	2	Mg/m^3	1.62	1.69

Compaction testing on 2 No. samples of the WPMCM indicate maximum dry density values of between 1.62 Mg/m^3 and 1.69 Mg/m^3, with optimum moisture content values of 18 %.

Overall, the optimum moisture content range suggests limited moisture conditioning or treatment may be required to the WPMCM where it is cut for earthworks. 3 No. positions only (TP303, TP304 and CP409) indicate that WPMCM will be encountered at cut formation where ground levels are to be reduced between 2 and 2.5 m.

The earthworks properties of the WPMCM are discussed further in Section 9.

4.8 Pennine Middle Coal Measures Formation

The primary purpose of the cored boreholes has been not only to identify the 'rockhead' which has been determined as being the point where soil becomes a rock at the description of 'extremely weak' but also to identify the Worsley 4 Foot coal seam and the workings associated with it. Thereafter the zone that will need to be treated by grouting has been identified. The following section covers the PMCM in isolation of the Worsley 4 Foot coal seam, with the seam covered in Section 5.

The site is underlain by Pennine Middle Coal Measures Formation (PMCM) bedrock comprising:

1. Extremely weak grey MUDSTONE;
2. Very weak dark grey MUDSTONE with rare very thin bed (20 mm) of ironstone;
3. Medium strong black COAL;
4. Weak dark grey SILTSTONE;
5. Strong dark grey SILTSTONE with rare coarse gravel sized siderite nodule;
6. Very strong grey SANDSTONE with occasional veins of coal; and
7. Strong locally very strong to extremely strong dark grey SILTSTONE with rare coalified plant fragments and locally very thin (50 mm) bed of coal.

The PMCM core retrieved was generally highly fractured and variable core. Although reference should be made to the individual borehole log for details, a summary of the range of observations and records obtained of the discontinuities during the fieldwork.

A summary of the discontinuities is presented below therefore as a general guide to the variable conditions encountered only:

1. Non-intact core recovered as: Soft brown mottled grey slightly gravelly CLAY. Gravel is angular fine and medium of coal;

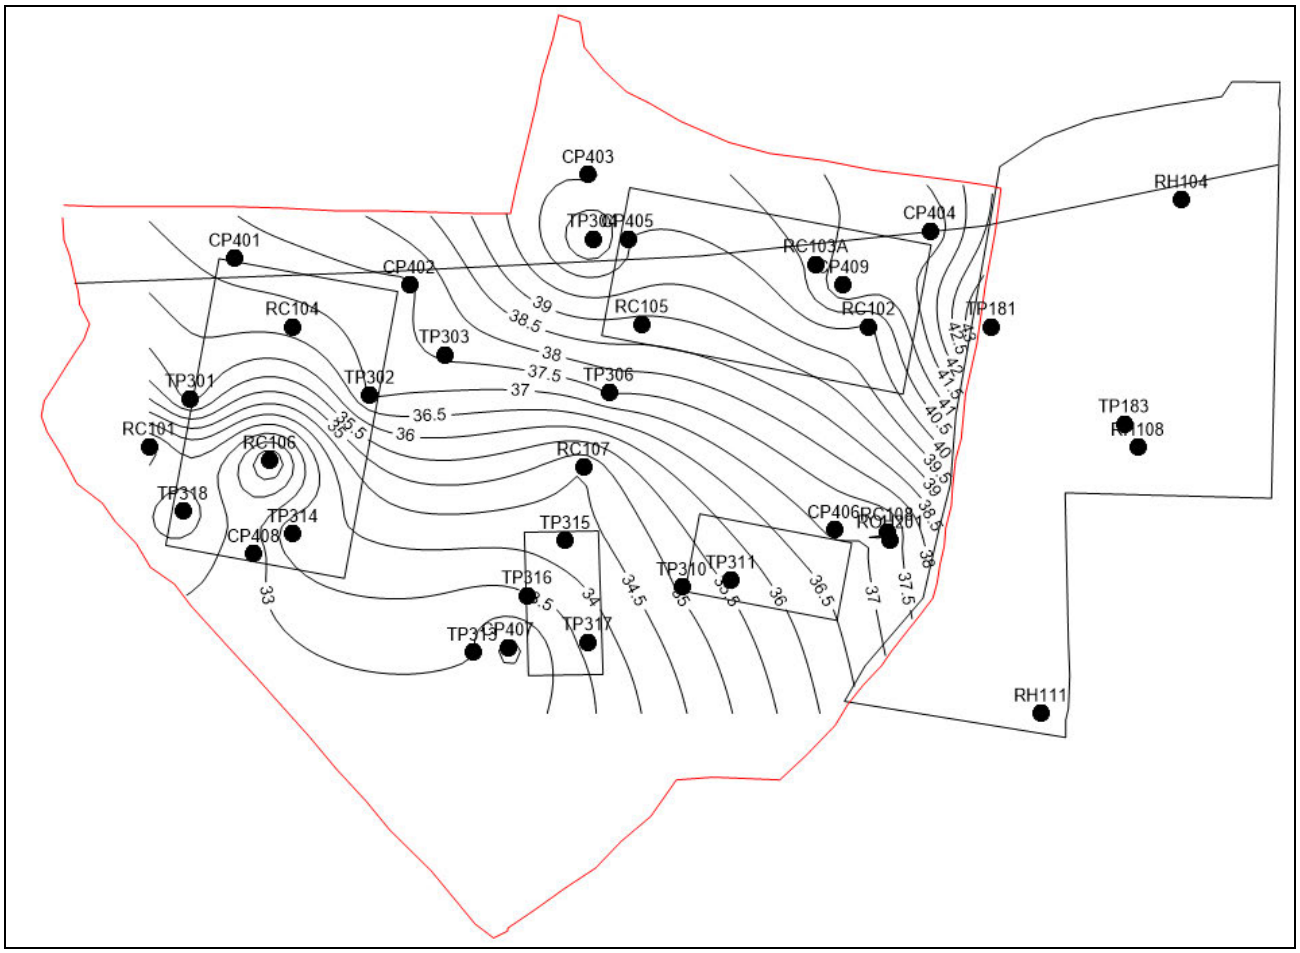
2. Solid core;

3. Medium spaced (340 - 370 mm) subhorizontal fracture orientated between 12 - 14 degrees undulating rough and clean;

4. Probably open random orientated fractures with clay infill;

5. Open (3 mm) subvertical to vertical fracture orientated at 75 - 90 degrees planar smooth and rough with quartz vein infill;

6. Closely spaced (90 - 150 mm) subhorizontal fracture orientated at 12 - 18 degrees planar smooth and clean;



7. Very closely spaced (35 - 50 mm) subhorizontal fracture oreientated between 8 - 10 degrees planar smooth and clean; and

8. 3 orthogonal joint sets producing small cubic blocks: J1: closely very closely space (40 - 60 mm) horizontal planar smooth and clean. J2: Subvertical fracture orientated at 82 degrees planar smooth with partial clay infill and orange staining. J3: Vertical fracture orientated at 78 degrees planar smooth clean.

The interface between soil either Made Ground, Glacial Deposits or weathered Pennine Middle Coal Measures and rock of the Pennine Middle Coal Measures has been provisionally contoured in terms of elevation and is shown in the figure below.

The rockhead has also been shown on the cross sections presented as Sections A-A', B-B' and C-C' in Appendix B.

Figure 8 Pennine Middle Coal Measures Rockhead Elevation (Extremely Weak)

As a result of the primary purpose of the fieldwork being to identify rockhead and the location of the Worsley 4 Foot coal seam, this due diligence investigation has not undertaken any laboratory testing of the PMCM rock core.

SPT testing undertaken within the PMCM between 2 and 5 m depth returned SPT N values of between 61 and 500 (extrapolated), averaging 61, indicating the material in the shallow part tested extremely weak to very weak rock.

Compaction testing has not been undertaken on the PMCM as it is not proposed that this stratum is to be included to any great extent in the earthworks.

5 WORSLEY 4 FOOT COAL SEAM

The Worsley 4 Foot coal seam was identified in RC107 at an elevation of 28.40 m AOD. The seam is at 105 m south from the subcrop, with drift being about 1.5 m thickness (from nearby TP304), making the Worsley 4 Foot seam at about 41.15 m AOD and so the dip at about 7 degrees and in a southerly direction. The published dip of the seam is 11.3 degrees in a southerly direction.

NOTE - The 'theoretical' Worsley 4 Foot coal seam (11.3 degrees southerly, has been plotted for information only on the sections in Appendix B.

From the evidence retrieved it has been concluded that the Worsley 4 Foot coal has been subject to underground mining throughout the site. There have been only limited indicators that the seam once existed. RC107 found what appears to be a pillar with coal 1.6 m thickness described as indicated below in Table 9:

Table 9 Worsley 4 Foot Coal Seam at RC107

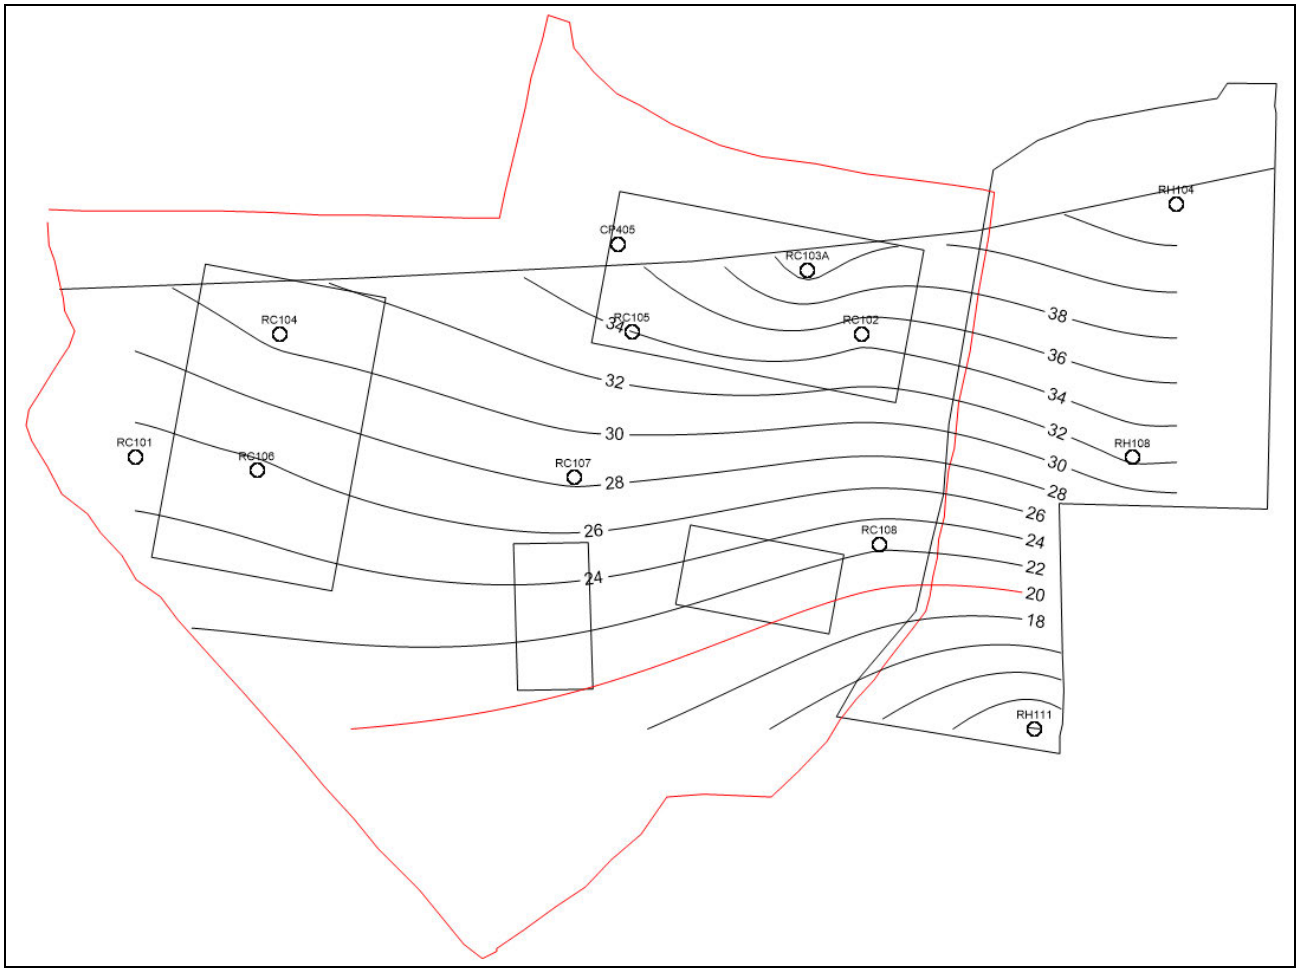
PointID	Depth	Elvn TOP	GEOL_BASE	Elvn BOT	Coal Thickness	GEOL_DESC
RC107	10.1	28.400	10.2	26.800	1.6	Possibly extremely weak black COAL. (PENNINE MIDDLE COAL MEASURES FORMATION) Medium strong black thinly laminated (<1 - 5 mm) COAL. (PENNINE MIDDLE COAL MEASURES FORMATION) Medium strong black thickly laminated (10 - 12 mm) COAL. (PENNINE MIDDLE COAL MEASURES FORMATION)

For estimates to be made of the safe cover thickness above a seam for grouting and for development of foundations a rock cover ratio of 10:1 has been adopted in general accordance with accepted practice.

The following table presents the information that has been used to 'model' the provisional contour of the top of the Worsley 4 Foot coal seam. Loss of flush and poor recovery during drilling has also been reconciled at the possible elevation for the Worsley 4 foot coal seam (ROH201) and is summarised in Table 10.

Table 10 Provisional Assessment Worked Worsley 4 Foot Coal Seam

PointID	Depth	Elvn TOP	Elvn BOT	GEOL_DESC
ROH201	18.2	22.590	21.790	Soft material (no flush) (PENNINE MIDDLE COAL MEASURES FORMATION)
ROH201	19	21.790	21.690	Hard material (no flush) (PENNINE MIDDLE COAL MEASURES FORMATION)



ROH201	19.1	21.690	21.290	Soft material (no flush) (PENNINE MIDDLE COAL MEASURES FORMATION)
RC102	10.92	32.700	34.620	Very strong dark grey SILTSTONE with locally at 10.82 m bgl thin (70 mm) bed of mudstone and ironstone. (PENNINE MIDDLE COAL MEASURES FORMATION) Note: Poor recovery between 11.62 - 12.0 m bgl.
CP405	4.8	5.12	36.312	Probably extremely weak black COAL. (PENNINE MIDDLE COAL MEASURES FORMATION) Recovered as: Black gravelly medium and coarse SAND. Gravel is angular fine and medium of coal.
RC102	7.65	8.4	33.510	Strong locally extremely weak between 7.72 - 7.75 m bgl black and dark grey MUDSTONE occasional thin laminations (<1 mm) of coal between 7.65 - 7.75 m bgl and frequent coalified plant fragments. (PENNINE MIDDLE COAL MEASURES FORMATION)
RC105	5.9	6	35.200	Medium strong black COAL. (PENNINE MIDDLE COAL MEASURES FORMATION)
RC105	7.05	7.2	34.050	Medium strong black COAL. (PENNINE MIDDLE COAL MEASURES FORMATION)
RC106	14.53	14.63	23.570	Medium strong black COAL. (PENNINE MIDDLE COAL MEASURES FORMATION)
RC107	10.9	11.7	27.742	Medium strong black thickly laminated (10 - 12 mm) COAL. (PENNINE MIDDLE COAL MEASURES FORMATION)
RH104	2.7	4	43.720	Coal (Intact)
RH108	13.2	13.5	32.480	Coal (Intact)
RH111	31	31.7	9.760	Coal (Intact)

The dip identified is shallower than the published dip and so the risk associated with the workings is more onerous for the shallower dip and will extend the zone affected by mine workings further down-dip (south).

The evidence for the presence of the Worsley 4 foot coal seam (other than RC107) has therefore come from close appraisal of the rock core, any ‘soft’ zones during the fieldwork, loss of flush and poor core recovery. The borehole logs from the adjacent LKC site to the east have been used where appropriate to assist the assessment, which has generally confirmed the shallower dip.

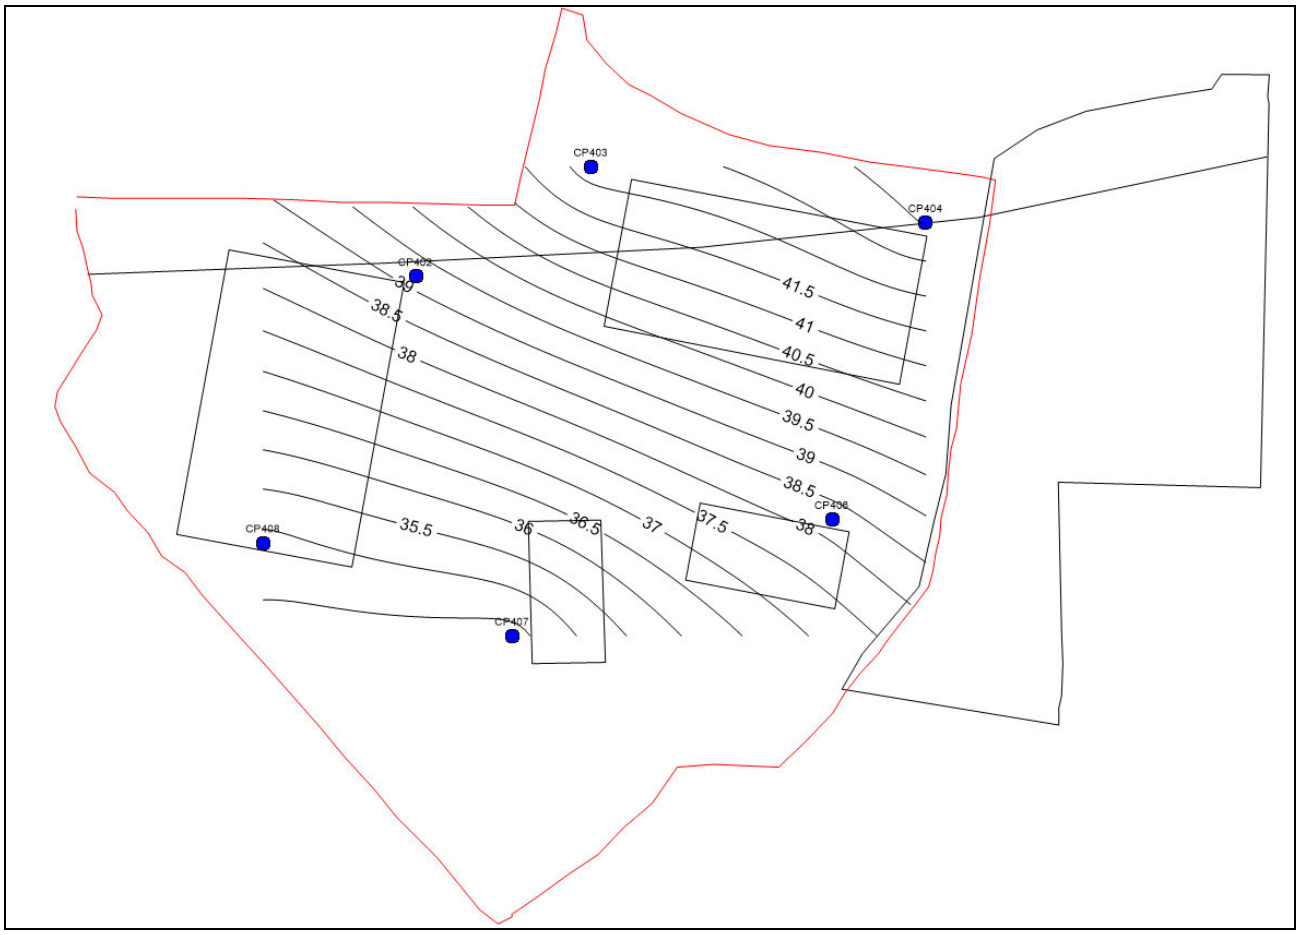
Cross sections A-A’, B-B’ and C-C’ show the location of the PMCM in Appendix B.

Figure 9 Worsley 4 Ft Seam Elevation Contour (with southerly extent of grouting 20m AOD)

With the seam thickness being recorded to be 1.6 m thickness, although it is recorded at 1.2 m (4 feet), there needs to be 16 m of rock cover above it treated by grouting and so a provisional contour of 20 m AOD is proposed for the grouting zone, which is shown on the red contour in Figure 9.

5.1 Groundwater Conditions

Groundwater was generally not encountered during the fieldwork, with the exception CP402 between 1.5 and 2 m in the Glacial Deposits. Gas and groundwater standpipes were installed in 4 No. rotary holes and 6 No. cable tool holes.



Four return groundwater monitoring and sampling visits are underway with two so far completed, with the following table indicating the depth to groundwater from the instruments from a visit on 5 May 2022 for the Glacial Till only. The groundwater profile for the Pennine Middle Coal Measures has not been plotted at this time.

Table 11 Groundwater Depths Glacial Till (5 May 2022)

CP402	CP403	CP404	CP406	CP407	CP408
1.20	0.66	1.53	2.40	1.49	0.86

Of the rotary holes installed with response zones in the PMCM, a variable groundwater has been recorded from 0.64 to 6.94 m depth. Inspection of the groundwater data suggests at this stage that a discrete shallow groundwater table (average 1.4 m depth) is present within the Glacial Deposits as shown in Figure 10.

Figure 10 Glacial Till Groundwater Elevations (2022-05-05)

6 CONTAMINATED LAND ASSESSMENT

6.1 Legislation and Approach

Contaminated Land is defined in Part 2A of the Environmental Protection Act 1990 as "any land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

(a) significant harm is being caused or there is a significant possibility of such harm being caused; or

(b) pollution of controlled waters is being, or is likely to be, caused".

It should be noted that under the Water Act 2003, part (b) of the above definition is to be amended to also include the word "significant".

Land contamination and its risk to human health is a material consideration under the planning regime as it applies to the intended use of a site which requires that risk assessment for planning purposes should be consistent with the requirements under Part 2A and that as a minimum, after carrying out the development and commencement of its use, the land should not be capable of being determined as ***Contaminated Land*** under Part 2A of the EPA 1990.

The National Planning Policy Framework (NPPF - 2012) puts the onus on local planning authorities to develop their own guidance and processes for dealing with potentially contaminated land under planning. This was revised and updated in 2019.

The key paragraphs from NPPF - 2019 relating to planning and dealing with land contamination are listed below.

170. Planning policies and decisions should contribute to and enhance the natural and local environment by:

a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland;
c) maintaining the character of the undeveloped coast, while improving public access to it where appropriate;
d) minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures;
e) preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should,
f) wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans; and
g) remediating and mitigating despoiled, degraded, derelict, contaminated and unstable land, where appropriate.

178. Planning policies and decisions should ensure that:
   a) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation);
   b) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and
   c) adequate site investigation information, prepared by a competent person, is available to inform these assessments.

179. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.

183. The focus of planning policies and decisions should be on whether proposed development is an acceptable use of land, rather than the control of processes or emissions (where these are subject to separate pollution control regimes). Planning decisions should assume that these regimes will operate effectively. Equally, where a planning decision has been made on a particular development, the planning issues should not be revisited through the permitting regimes operated by pollution control authorities.

Therefore, early engagement with the local authority and their environmental health/pollution control staff is advised.

A risk based approached is taken in the assessment of contaminated land which takes account of the proposed (or existing) use of a site. The key stages are as follows:

1. **Development of a Site Conceptual Model** – This is key to the establishment of viable pollutant linkages from a hazardous source (e.g. hydrocarbon contamination) to a sensitive receptor (e.g. a river) through a viable pathway (e.g., groundwater flow) which allows the hazard to reach the receptor. On some occasions the lack of a viable pollutant linkage will result in no further assessment being necessary

2. **Generic Quantitative Risk Assessment** – This comprises a screening exercise comparing measured chemical data against published data which are based on numerous assumptions regarding the nature of the source, pathway and receptor which are valid or err on the side of safety for the current site in question. Typically for human health risk assessment this involves comparing chemical data with published Generic Assessment Criteria. For controlled waters assessment this typically comprises the direct comparison of chemical tests on leachate or groundwater with Environmental Quality Standards (EQS) or other suitable assessment criteria.

3. **Detailed Quantitative Risk Assessment** – Should contaminants of concern be present at the site at concentrations exceeding the Generic Assessment Criteria, further detailed quantitative assessment can be carried out which accounts for the specific exposure conditions at the site (with respect to human health assessment) or models the

degradation, dilution and attenuation of contaminants during transport from source to receptors.

4. **Evaluation** – The final stage in the process is to appraise the findings of the Risk Assessment and determine the need or otherwise for additional assessment or remediation.

6.2 Conceptual Site Model

The CSM and plausible pollutant linkages are defined below based on the desk study review of publicly available information collated in the previous sections. A preliminary conceptual model is generally of an open field which has a history of underground mining activity.

There is 1 No. known shaft in the southeast corner near the boundary.

There is 1 No. shallow worked coal seam called the Worsley 4 Foot, which subcrops east-west in the northern quarter of the site.

Made Ground was suspected to be present and this has been confirmed by the current DCE due diligence investigation works.

6.3 Sources

A review of the site's history and environmental setting has identified a potential presence of Made Ground with an unknown composition. It is therefore considered plausible that contaminants of concern (CoCs) and as such a source of contamination maybe present as summarised below. The list of contaminants has been established through a review of Annexe 3 in the Guidance for the Safe Development of Housing on Land Affected by Contamination R&D66: 2008 Volume 2.

Potential CoCs include:

- Metals - arsenic, cadmium, chromium, chromium VI, copper, lead, mercury, nickel, selenium, zinc;
- Polycyclic Aromatic Hydrocarbons (PAH);
- Total Petroleum Hydrocarbons (TPH); and
- Ground gas (carbon dioxide and methane).

6.4 Pathways

The key pathway for migration of CoCs include the following:

6.4.1 Human Health

1. Ingestion of source soils or groundwaters;
2. Inhalation of source dusts and vapours; and
3. Direct skin exposure (dermal contact) with soils.

6.4.2 Environmental

As the site is situated overlying a Secondary A and Secondary (Undifferentiated) Aquifer, the potential for infiltration, leaching and dissolution of ground source chemicals into underlying groundwater is possible, therefore, the following potential environmental pathways exist:

1. On-site vertical leaching of CoCs in soils to shallow groundwater; and
2. Lateral migration of impacted groundwater towards surface water receptors.

6.5 Receptors

The key potential receptors identified are:

Human Health

1. Current and future site users; and
2. Site development and maintenance workers.

Environmental

1. Groundwater directly beneath the site; and
2. Water courses on-site.

6.5.1 Potential Pollutant Linkages

There is a possibility based on previous investigations that contaminated Made Ground and previous mine-workings may have the potential to affect human health and wider environmental receptors. This includes the potential for ground gases and/or mine gases to affect future buildings and their occupants.

- In order to assess the risks to human health chemical testing data from soils were screened using published generic assessment criteria (GACs) as these account for the various likely exposure routes for humans in a commercial end-use scenario which will be protective of human receptors.

- Risks to controlled waters were assessed by screening soil-leachate and groundwater data against published environmental quality standards (EQS) and Drinking Water Standards (DWS) to determine the level of impact and therefore the likely risk.

- Risks from ground gases/mine gases was undertaken in general agreement with CIRIA C665 and BS 8485:2015 and A1:2019, whereby ground gas concentrations were combined with ground gas flow rates in order generate a gas screening value (GSV) for each set of readings from which the gas regime (in terms of a characteristic situation rating) can be determined and the level of risk estimated.

6.6 Risk Evaluation - Proposed End Use

The potential pollutant linkages risks have been evaluated. The majority of risks were identified as **MODERATE-LOW**. A number of **MODERATE** and **MODERATE-LOW** risks for future site users, proposed buildings/foundations/services and controlled waters have been identified which warrant investigation, these are summarised in Table 2.

Such investigation should include a suitable number of exploratory hole locations from which samples should be recovered (both soil and water) and analysed for the suite of contaminants listed in Section 6.3. The exploratory holes should be completed with gas and groundwater monitoring wells sufficient to characterise the ground gas regime and groundwater flow direction.

It should be noted that the risks summarised in Table 2 are based on contamination being generally present across the whole site. However, it is anticipated from the site history that the extent of any contamination is likely to be isolated with generally low source concentrations.

Table 12 Pollutant Linkages Rated Greater than LOW

Source Description	Pathway Description	Receptor Description	Risk Rating
Ground Gas	Inhalation	Future Commercial	MODERATE
Ground Gas	Migration/entry into voids, basements, enclosed spaces	Future Commercial	MODERATE
Ground Gas	Migration/entry into voids, basements, enclosed spaces	Buildings, Foundations	MODERATE
INORGANIC contamination in Soil/Made Ground	Ingestion	Future Commercial	MODERATE-LOW

Source Description	Pathway Description	Receptor Description	Risk Rating
ORGANIC contamination in Soil/Made Ground	Ingestion	Future Commercial	MODERATE-LOW
INORGANIC contamination in Soil/Made Ground	Inhalation	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Inhalation	Future Commercial	MODERATE-LOW
INORGANIC contamination in Soil/Made Ground	Direct skin exposure (dermal contact)	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Direct skin exposure (dermal contact)	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Direct Contact	Buildings, Foundations	MODERATE-LOW
ORGANIC contamination in GW	Direct Contact	Buildings, Foundations	MODERATE-LOW
Other Inorganic contamination in soil	Direct Contact	Buildings, Foundations	MODERATE-LOW
Other Inorganic contamination in GW	Direct Contact	Buildings, Foundations	MODERATE-LOW
INORGANIC contamination in GW	Migration	River/Stream	MODERATE-LOW
ORGANIC contamination in GW	Migration	River/Stream	MODERATE-LOW
Other Inorganic contamination in GW	Migration	River/Stream	MODERATE-LOW

6.7 Risk Evaluation – Current Users

The risk to current users has been assessed as **LOW**.

6.8 Risk Evaluation – Site Development and Maintenance Workers

Several risks greater than **LOW** have been identified with respect to site development and site maintenance workers as detailed in Appendix E. Ground investigation works are recommended to confirm and quantify the risk which is likely to be mitigated through provision of appropriate PPE. During the construction phase the potential risks to workers will be dealt with under the Health and Safety at Work Act (1974) and regulations made under the act. The investigation should include a suitable number of exploratory hole locations from which both soil and water samples can be recovered and analysed for the suite of the contaminants listed.

6.9 Statutory Risks

Under Part 2A of the Environmental Protection Act 1990 (Section 78A(2)) ***Contaminated Land*** is defined as:

> *"any land which appears to the LOCAL AUTHORITY in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that –*

"(a) SIGNIFICANT HARM is being caused or there is a SIGNIFICANT POSSIBILITY of such harm being caused; or

"(b) POLLUTION OF CONTROLLED WATERS is being, or is likely to be, caused".

The significant possibility of significant harm (SPOSH) is difficult to define and at the time of writing DEFRA has begun a consultation and review in order to clarify what SPOSH means. Notwithstanding, SPOSH must be defined and applied by the relevant local authority or by the EA in the case of special sites (typically, heavily polluted sites such as large gas works, military sites, etc.). From the preliminary evaluation of risks, it is unlikely that the land at the site would be determined by the local authority as Contaminated Land under the Part 2A regime.

The National Planning Policy Framework (NPPF - 2012) puts the onus on local planning authorities to develop their own guidance and processes for dealing with potentially contaminated land under planning. This was revised and updated in 2019.

The key paragraphs from NPPF - 2019 relating to planning and dealing with land contamination are listed below.

170. Planning policies and decisions should contribute to and enhance the natural and local environment by:
- h) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- i) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland;
- j) maintaining the character of the undeveloped coast, while improving public access to it where appropriate;
- k) minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures;
- l) preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should,
- m) wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans; and
- n) remediating and mitigating despoiled, degraded, derelict, contaminated and unstable land, where appropriate.

178. Planning policies and decisions should ensure that:
- d) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation);
- e) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and
- f) adequate site investigation information, prepared by a competent person, is available to inform these assessments.

179. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.

183. The focus of planning policies and decisions should be on whether proposed development is an acceptable use of land, rather than the control of processes or emissions (where these are subject to separate pollution control regimes). Planning decisions should assume that these regimes will operate effectively. Equally, where

a planning decision has been made on a particular development, the planning issues should not be revisited through the permitting regimes operated by pollution control authorities.

Therefore, early engagement with the local authority and their environmental health/pollution control staff is advised.

6.10 Generic Human Health Quantitative Risk Assessment

The results of the chemical testing on soils were compared with published Generic Assessment Criteria (GAC) as an initial screen to determine if more detailed assessment is required.

Full details of the screening exercise are presented in Appendix D. None of the results exceeded their relevant screening criteria.

6.11 Generic Human Health Assessment Discussion and Conclusions

None of the determinands tested for exceeded their relevant GAC for a commercial end use. Therefore, no remediation of site soils is required to bring the site into use as a commercial development. Further testing is considered appropriate as part of a detailed investigation of the site.

6.12 Generic Controlled Waters Quantitative Risk Assessment

6.12.1 Controlled Waters – Leachate

The results of the chemical testing on leachate were compared with published Environmental Quality Standards (EQS) or UK Drinking Water Standards (UK DWS) as an initial screen to determine if more detailed assessment is required. Full details of the screening exercise are presented in Appendix G and summarised in Table 13.

Table 13 Leachate Results Exceeding Controlled Waters Screening Values

Determinands	Screen Value (µg/l)	Source of Screening Value	Location	Depth (m bgl)	Concentration(µg/l)
Lead	4	EQS	TP311	0.74	4.8
Selenium	10	UK DWS	TP302	2.5	15

No other Contaminants of Concern were identified at a concentration exceeding its controlled waters screening value.

6.12.2 Controlled Waters – Groundwater

The results of the chemical testing on groundwater were compared with published Environmental Quality Standards (EQS) or UK Drinking Waters Standards (UK DWS) as an initial screen to determine if more detailed assessment is required. Full details of the screening exercise are presented in Appendix G and summarised in Table 14.

Table 14 Groundwater Results Exceeding Controlled Waters Screening Values

Determinands	Screen Value (µg/l)	Source of Screening Value	Location	Depth (m bgl)	Concentration(µg/l)
Chromium	5	EQS	RC106	4.62	6.7

No other Contaminants of Concern were identified at a concentration exceeding its controlled waters screening value.

6.13 Generic Controlled Waters Assessment Discussion and Conclusions

Lead

1 No. leachate sample obtained from TP311 at 0.74 m bgl was found to exceed the screening value of lead of 4 µg/l with a concentration of 4.8 µg/l. Whilst this is in exceedance of the screening value, it presents a **VERY LOW** risk to controlled waters due to it being a slight exceedance for the more stringent EQS screening value and does not exceed the equivalent UK DWS of 10 µg/l.

Selenium

1 No. leachate sample obtained from TP302 at 2.5 m bgl was found to exceed the screening value of lead of 10 µg/l with a concentration of 15 µg/l. Whilst this is in exceedance of the screening value, it presents a **LOW** risk to controlled waters due to it being a slight exceedance in only one position and due to the unproductive nature of the underlying strata.

Chromium

1 No. groundwater sample obtained from RC106 at 4.62 m bgl was found to exceed the screening value of lead of 5 µg/l with a concentration of 6.7 µg/l. Whilst this is in exceedance of the screening value, it presents a **VERY LOW** risk to controlled waters due to it being a slight exceedance for the more stringent EQS screening value and does not exceed the equivalent UK DWS of 50 µg/l.

While concentrations of contaminants of concern were identified within water samples obtained from the site, the risk to controlled waters is **LOW**, and no further action is required.

6.14 Ground Gas Assessment

Ground gas assessment has been undertaken to assess risks associated with carbon dioxide, carbon monoxide and methane to new buildings and their users. The first monitoring round undertaken on 5 May 2022 with a further 9 No. readings taken at regular intervals up to 7 October 2022. The wells were developed on 18 May 2022.

To date, a total period of 6 months monitoring has taken place. Atmospheric pressures recorded over the duration of the monitoring visits at the site range between 1005 mb and 1018 mb.

Gas monitoring from within the Made Ground together with Glacial Till and separately from within Pennine Middle Coal Measures (PMCM) and the monitoring of each is discussed in the following sections.

6.14.1 Gas monitoring of Made Ground and Glacial Till

The results of the gas monitoring in the Made Ground and Glacial Till are summarised in Table 15 below for locations where response zones have been placed within these stratums. Full details of the ground gas and groundwater monitoring are presented in Appendix A.

Table 15 Summary of Gas Monitoring – Made Ground and Glacial Till

Well	Methane (CH_4) % v/v	Carbon Dioxide (CO_2) % v/v	Oxygen (O_2) %v/v	Hydrogen Sulphide (H2S) %v/v	Carbon Monoxide (CO) ppm	Flow Rate l/hr (steady unless noted otherwise)
CP403	0.0	3.2	11.9	0.0	3	0.0
CP407	0.0	4.9	10.2	0.0	6	1.3 (initial) 0.0 (steady)
CP408	0.0	1.8	16.1	0.0	7	-19 (initial) 0.0 (steady)

Interpretation of gas monitoring has been carried out in accordance with the recommendations contained within CIRIA 665 (2007) '*Assessing risks posed by hazardous ground gases to buildings*' and BS8485 (2019) '*Code of Practice for The Design of Protective Measures for Methane and Carbon Dioxide Ground Gases for New Buildings'*.

The guidance includes the calculation of volumetric flow rates of ground based on maximum recorded gas concentrations and maximum recorded gas flow rates. Limiting factors are applied to the gas monitoring results and a characteristic situation is then applied to the site. The worst-case volumetric flow rates for response zones within the Made Ground and Glacial Till are presented in Table 18.

Table 16 Gas Monitoring Characteristic Values – Made Ground and Glacial Till

Well	Maximum CH_4 %v/v	Maximum CO_2 %v/v	Maximum Flow Rate (l/hr)	CH_4 Volumetric Flow Rate (l/hr)	CO_2 Volumetric Flow Rate (l/hr)
CP403	0.0	3.2	<0.1 (steady)	<0.0001	<0.0032
CP407	0.0	4.9	<0.1 (steady)	<0.0001	<0.0049
CP408	0.0	1.8	<0.1 (steady)	<0.0001	<0.0018

* Actual maximum flow rate recorded was 0.0 l/hr. Accuracy of monitoring equipment is to +/- 0.1 l/hr

The results for locations with response zones within the Made Ground and Glacial Till only indicate that the site be categorised as Characteristic Situation 1(using BS8485 (2019) and Wilson and Card CIRIA C665) given that maximum carbon dioxide levels are below 5% and volumetric flow rates are at less than 0.07 l/hr.

6.14.2 Gas Monitoring of Pennine Middle Coal Measures

The results of the gas monitoring are summarised in Table 17 below are for locations where response zones were within the PMCM, including Weathered Pennine Middle Coal Measures. Full details of the ground gas and groundwater monitoring are presented in Appendix A.

Table 17 Summary of Gas Monitoring – Pennine Middle Coal Measures (PMCM)

Well	Methane (CH_4) % v/v	Carbon Dioxide (CO_2) % v/v	Oxygen (O_2) %v/v	Hydrogen Sulphide (H2S) %v/v	Carbon Monoxide (CO) ppm	Flow Rate l/hr (steady unless noted otherwise)
CP402	0.0	6.6	9.8	0.0	3	0.0
CP404	0.0	6.5	8.1	0.0	4	0.0
CP406	0.0	8.9	1.8	0.0	3	0.0
RC101	0.0	10.4	0.7	0.0	8	0.0
RC102	0.0	7.4	0.0	10.0	4	51.4 (initial) 29.1 (steady)
RC104	0.0	0.6	19.3	0.0	8	66 (initial) 0.0 (steady)
RC105	0.0	0.9	16.2	0.0	17	1.0 (initial) 0.0 (steady)
RC106	0.0	3.2	9.7	0.0	2	0.0
RC107	0.0	7.2	2.0	0.0	6	0.0
RC108	0.0	5.2	12.5	2.8	6	0.0

Interpretation of gas monitoring has been carried out in accordance with the recommendations contained within CIRIA 665 (2007) '*Assessing risks posed by hazardous ground gases to buildings*' and BS8485 (2019) '*Code of Practice for The Design of Protective Measures for Methane and Carbon Dioxide Ground Gases for New Buildings'*.

The guidance includes the calculation of volumetric flow rates of ground based on maximum recorded gas concentrations and maximum recorded gas flow rates. Limiting factors are applied to the gas monitoring results and a characteristic situation is then applied to the site. The worst-case volumetric flow rates for response zones within the PMCM are presented in Table 18.

Table 18 Gas Monitoring Characteristic Values – Pennine Middle Coal Measures (PMCM)

Well	Maximum CH_4 %v/v	Maximum CO_2 %v/v	Maximum Flow Rate (l/hr)	CH_4 Volumetric Flow Rate (l/hr)	CO_2 Volumetric Flow Rate (l/hr)
CP402	<0.1	6.6	<0.1	<0.0001	<0.0066
CP404	<0.1	6.5	<0.1	<0.0001	<0.0065
CP406	<0.1	8.9	<0.1	<0.0001	<0.0089
RC101	<0.1	10.4	<0.1	<0.0001	<0.0104
RC102	<0.1	7.4	29.1 (steady)	<0.0291	2.1534
RC104	<0.1	0.6	<0.1 (steady)	<0.0001	<0.0006
RC105	<0.1	0.9	<0.1 (steady)	<0.0001	<0.0009
RC106	<0.1	3.2	<0.1	<0.0001	<0.0032
RC107	<0.1	7.2	<0.1	<0.0001	<0.0072
RC108	<0.1	5.2	<0.1	<0.0001	<0.0052

* Actual maximum flow rate recorded was 0.0 l/hr. Accuracy of monitoring equipment is to +/- 0.1 l/hr

The gas monitoring within PMCM recorded initially high that quickly diminish (RC102, RC104 and RC105) or low flow rates with a longer monitoring period. RC102 recorded a maximum steady flow rate of 29.1 l/hr on 1st June 2022, however since then whilst there have been initial readings above detection limit the steady readings have remained at <0.1 l/hr similar to other installations within the PMCM. A maximum volumetric flow rate for carbon dioxide of 2.1534 l/hr equates to a classification of Characteristic Situation 2 (using BS8485 (2019) and Wilson and Card CIRIA C665) for the site.

6.14.3 Gas Monitoring – Overall Characteristic Situation

Taking all monitoring data into consideration, an overall Characteristic Situation of 2 is considered appropriate for the site. A maximum volumetric flow rate of 2.15 l/hr was recorded at the site in RC102 (within the PMCM), with all other calculated volumetric flow rates (from both Made Ground / Glacial Till and PMCM) equate to a Characteristic Situation 1 classification. Whilst this could indicate a hotspot around RC102 where Characteristic Situation 2 is appropriate, given the general trend of maximum carbon dioxide readings recorded from other locations of above 5%, an increase to Characteristic Situation 2 is deemed appropriate for the site.

Nevertheless, ground gas monitoring should be undertaken both during and post completion of any earthworks to confirm that this Characteristic Situation remains appropriate.

6.15 Excavations

Groundwater monitoring to date indicates groundwater to be absent or at levels around 1.4 m bgl. Observations during inclement weather during the fieldwork suggest that surface and near surface conditions will be subject to seasonal variation and it is considered likely that groundwater levels would rise to around 1 m bgl during wet periods.

Excavations below this depth for services or foundation construction are likely to need groundwater control measures to be implemented. Excavation sides were found to be generally stable during

trial pitting, though the presence of shallow groundwater will make sides unstable for which support will be required.

6.16 Sulphate Assessment

The classification of the site in terms of concrete in aggressive ground is based on the guidance provided within the BRE Special Digest 1 (BRE SD1). The characteristic chemical laboratory test results for soil samples recovered are presented in Table 199.

Table 19 Characteristic soil chemistry results for soil classification

Determinand	Units	Glacial Till	Weathered Pennine Middle Coal Measures
pH	pH Units	8.50	7.5
Magnesium (Water Soluble)	g/l	0.00	< 0.010
Sulphate (2:1 Water Soluble) as SO4	g/l	0.03	0.034
Total Sulphur	%	0.14	0.099
Chloride (Water Soluble)	g/l	0.01	< 0.010
Nitrate (Water Soluble)	g/l	0.02	< 0.010
Sulphate (Acid Soluble)	%	0.04	0.011

Chemical testing of samples recovered from the Glacial Till and weathered Pennine Middle Coal Measures indicates that both of these materials are classified as Design Sulphate class DS-1 with corresponding Aggressive Chemical Environment for Concrete AC-1. Further testing is advised during the detailed investigation.

7 GEOTECHNICAL ENGINEERING ASSESSMENT

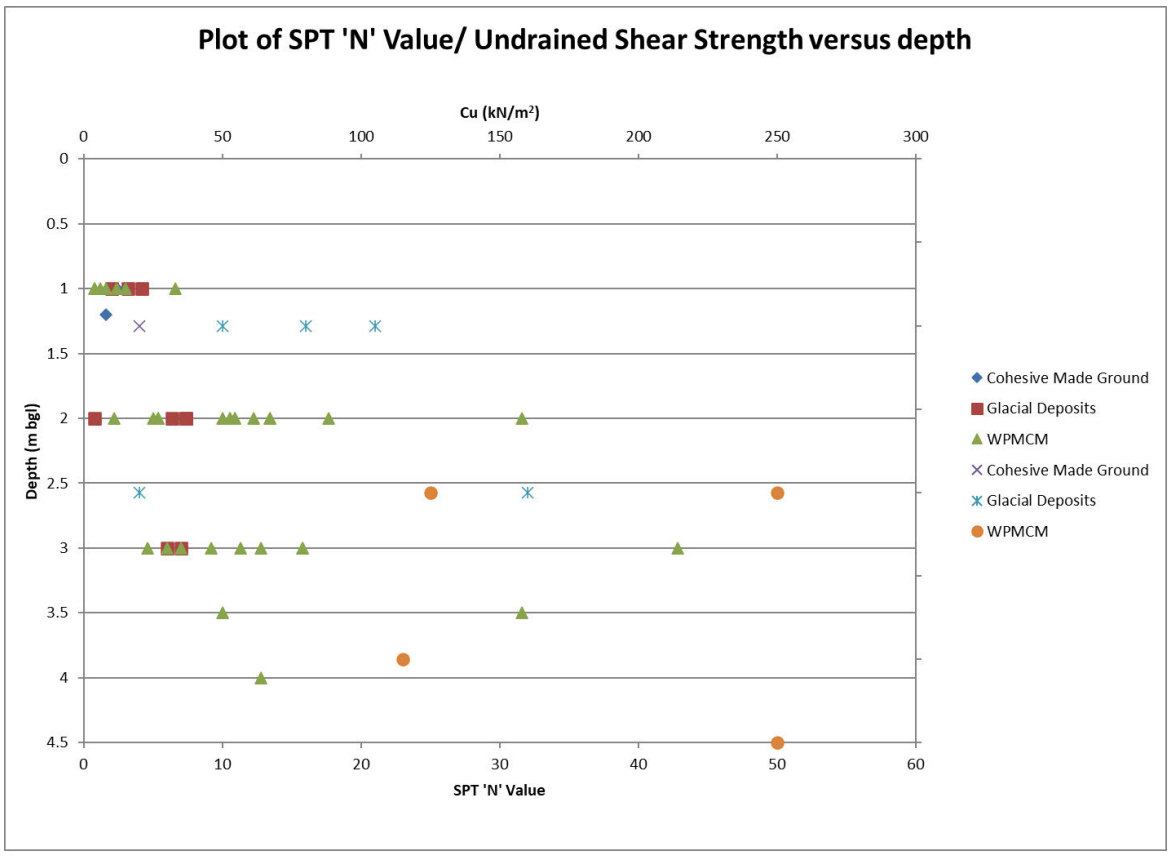
7.1 Development Proposal

It is understood that the site will be used for the construction of 4 No. industrial plot, each inclusive of warehouses and office space, parking, associated hardstanding yard areas and green open space. The proposed development layout is shown in Figure 1 below which includes the total site (Blue line).

Figure 11 Proposed Development Layout

No loading information is currently available though as indicated earlier a cut-fill formation model has been developed BED.

7.2 Ground Strength Profile



Standard Penetration Testing (SPT) results from across the site indicate that the Made Ground is variable in strength from soft to stiff (locally indicated to be very stiff due to cobbles).

The Glacial Deposits being generally firm locally stiff.

The Weathered PMCM CLAY are indicated to be stiff becoming very stiff with depth, with the underlying PMCM indicated to be mainly extremely weak to very weak, though has been shown in siltstone and sandstone horizons to be strong and very strong.

Figure 12 shows a the SPT values with depth. It is important to recognise however, that there exists location specific conditions that are not evident for such a plot and so the following sections are an attempt at describing the variable conditions and the viable treatment and ground improvement options available.

Figure 12 SPT 'N' values with depth

7.3 Spread Foundations

Based on the BED formation model, foundations elevations for Units 1 and 2 to be placed on Made Ground or fill in the southern half of the units while potentially in Glacial Deposits and weathered Pennine Middle Coal Measures in the northern half.

There are also transition areas (along the cut-fill line) where Made Ground, Glacial Till or weathered PMCM are present.

Indicative allowable bearing capacity values for each stratum encountered on site are given in the following sections but are not a replacement for plot specific design. Differential settlement estimates can be made only on a plot design basis and so are not quoted herein.

The Made Ground is not suitable to support spread foundations without improvement being undertaken to a designed and specified standard. Where Made Ground after cut is up to 1 m thickness remaining it is considered a viable option to use heavy compaction plant to proof roll the surface and combine that with stabilisation to achieve the required CBR value(s). Where Made Ground is deeper, Rapid Impact Compaction or similar may be considered also combined with stabilisation. A schematic indication of where such options may be appropriate are shown on Drawing 21133J-5 in Appendix B.

7.3.1 Spread Foundations – Placed Fill

Placed fill should be engineered to a specification with a minimum stiffness of 15 MPa to provide a suitable allowable bearing capacity and settlement characteristics for spread foundations. The earthworks are to be designed to limit differential settlement between foundations on placed fill and detailed assessment undertaken where foundations and their depth of influence are not exclusively on placed fill.

7.3.2 Spread Foundations – Glacial Till Deposits

Shallow foundations may be placed within the Glacial Till deposits and although locally soft Glacial Deposits have been identified and will need to be moisture conditioned to be re-used, using an undrained shear strength of 50 kN/m^2, an allowable bearing capacity of 100 kN/m^2 is suitable for a pad foundation up to 4 m by 4m placed a minimum of 1 m below the top of the Glacial Deposits. This will limit total settlement to less than 25 mm.

The presence of hedge and tree line areas will require localised deepening of foundations to compensate for the effects of clay shrinkage and swelling.

7.3.3 Spread Foundations – Weathered Pennine Middle Coal Measures

Shallow foundations are likely to locally be placed within the Weathered PMCM CLAY. Using an undrained shear strength of 100 kN/m^2 an allowable bearing capacity of 200 kN/m^2 is considered appropriate for a pad foundation up to 4 m by 4 m placed a minimum of 1 m below the top of the Weathered PUCM in order to limit settlement to less than 25 mm.

7.3.4 Spread Foundations – Pennine Middle Coal Measures

Based on the proposed earthworks model, shallow foundations may be placed in PMCM only in the northeast part of Unit 1. For these foundations an allowable bearing capacity of 250 kN/m^2 is considered appropriate for a pad foundation up to 4 m by 4 m placed a minimum of 1 m below the top of the PUCM rock. This will limit settlement to less than 25 mm.

7.3.5 Spread Foundations – Differential Settlement Risk

Due to the variability in formation material type and stiffness across each building footprint, it is important that allowable bearing capacity and stiffness is assessed on a foundation by foundation basis by the designer in order to adequately consider differential settlement.

7.4 Pile Foundations

Based on the ground conditions encountered and proposed earthworks, piling is considered only where Made Ground is not improved or should exceptionally high loads be proposed for the structures.

7.5 Floor Slab

Based on the proposed earthworks and development model, it is likely that building floor slabs will be constructed across both cut in-situ material, improved Made Ground and/or engineered fill.

Although the floor slabs will be across cut and fill areas for which differential settlement needs to be considered the magnitude of each is such that about 2.5 m of cut and 2.5 m of fill across the unit areas are not expected to cause large heave/settlement risks and so it is not anticipated that a period to elapse between earthworks and floor slab construction will be necessary.

For a ground bearing floor slab placed a minimum of 0.5 m below the top of existing material a Modulus of Subgrade Reaction of 35 MN/m^2/m considered appropriate and this alongside the other materials meeting their design stiffnesses will limit differential settlement to less than 1 in 500 and to support loads up to 50 kN/m^2.

7.6 Slope Stability & Retaining Walls

Earthworks operations slopes are to be created around the perimeter of the site and retaining walls are expected across the site between development plateaus.

Cut slopes are expected to be in Glacial Deposits, with fill slopes in Made Ground fill. In consideration of the exposed natural Glacial Till in Cut and the re-engineered materials of the similar property materials, a safe slope angle of 1:3 is considered appropriate in both cases. This should be confirmed with the designer as it may be possible to increase the steepness of slopes.

Location specific slope stability analysis may be necessary to determine the factor of safety against failure for both cut and upfilled areas.

Based on the ground investigation data and laboratory test results, the following parameters are considered appropriate for slope stability assessment and retaining wall design. A detailed slope assessment and design and retaining wall design should be undertaken by the earthworks designer.

Table 20 Slope stability & retaining wall design parameters

Strata	Undrained Shear Strength kN/m^2	Bulk Weight Mg/m^3	Phi' Degrees	Drained Cohesion kN/m^2
Made Ground*	75	1.9	30	2
Glacial Till	60	2.0	26	2
Weathered PMCM	60	1.9	30	2
PMCM Rock	600	2.1	28	5

*- Made Ground without improvement should not be left insitu below any embankment or left untreated in any cut face. Values stated are post treatment/improvement

7.7 Ground Improvement

7.7.1 Vibro Stone Columns

Ground improvement in the form of vibro stone columns may be considered viable in localised areas of deeper Made Ground, though generally this technique is expected to be cost-effective over larger and deeper areas requiring improvement.

The presence of soft clays within the Made Ground may however present problems with "necking" of the stone columns whereby the low lateral support provided by the soft clay can result in failure of the column.

Typically, treatment by stone columns would improve the ground to allow ground bearing floor slab loadings of around 50 kN/m^2 and foundation loadings in the region of 125 kN/m^2. If higher values are required for the development these should be considered in detail by the designer.

Where stone columns are to be considered further, it is recommended that the advice of a specialist contractor is sought prior to detailed design.

7.7.2 Rapid Impact Compaction / Dynamic Compaction

Light dynamic compaction (minimum 9 tonne Rapid Impact Compaction) is considered more viable in granular Made Ground or mixed cohesive soils. Where Made Ground is deeper than 1m or so, Rapid Impact Compaction or similar may be considered also combined with stabilisation. Consultation with a specialist may elicit favourable offerings to improve the predominantly cohesive Made Ground (potentially considered to be mixed soils), though it is expected that limited benefit with shallow Glacial Deposits groundwater on the subject site.

Where suitable conditions are present a characteristic friction angle of 35 degrees, characteristic Youngs modulus throughout the treated material of around 15 MN/m^2 and bulk density of 1.8 Mg/m^3 may be achievable. Note higher values may in fact be achievable so the advice of specialist subcontractors should be sought.

A schematic indication of where such options may be appropriate are shown on Drawing 21133J-5 in Appendix B.

Conventional heavy dynamic compaction would also technically be suitable at the site, however issues associated with vibration and flying debris affecting the nearby housing and footpath areas would be more pronounced and are likely to make the process unsuitable overall.

7.7.3 High Energy Impact Compaction (HEIC) or Polygonal 26T roller

Ground improvement by rolling dynamic compaction (such as High Energy Impact Compaction) may be considered as an alternative in non-structural areas (yards and roads) to minimise long term differential movements under pavements and where granular Made Ground is present to a maximum of say 1.5-2 m thickness.

Where Made Ground after cut is up to 1 m thickness remaining it is considered a viable option to use heavy compaction plant to proof roll such as the Polygonal 26 T roller also the surface and combine that with stabilisation to achieve the required CBR value(s).

A schematic indication of where such options may be appropriate are shown on Drawing 21133J-5 in Appendix B.

If this is adopted, it is recommended that the upper 450 mm is placed (replaced) as engineered fill conventionally compacted. HEIC is not generally considered suitable for materials intended to support foundation loadings.

HEIC may be considered for thick layer compaction works for the general earthworks upfill, providing suitable validation testing regime is agreed.

If HEIC is to be considered further the advice of a specialist contractor should be sought prior to design finalisation.

7.7.4 Lime / Cement Modification

Where material to be placed during earthworks operations requires drying to achieve optimum moisture content, consideration may be given to the use of lime or cement modification. Material across the site is generally indicated to be suitable for lime or cement treatment, with the exception of localised areas of Made Ground which have Organic Carbon levels of greater than 2 %. These areas should be identified by ongoing laboratory testing (details to be confirmed by the designer) during works and may require additional treatment.

The need or otherwise for adoption of lime or cement modification should be considered by the earthworks contractor following additional assessment. If lime or cement treatment is to be considered further the advice of a specialist contractor should be sought and a suitable programme of suitability and design testing would need to be carried out to confirm stabilisation mix designs in accordance with the recommendations presented in Design Manual for Roads and Bridges Volume 4 Section 1 Part 6 - HA74/04.

It should be noted that the slope angle of constructed slopes could be increased if stabilised earthworks are employed. The details of any slope stability should be confirmed by the designer.

7.8 Pavement Design

Laboratory classification test results generally indicate that the predominant earthworks materials comprise Glacial Deposits or weathered PMCM comprise CLAY materials both with an average PI of 29% and so an equilibrium CBR value of between 3 % and 4% may be considered appropriate at optimum moisture content.

Laboratory testing indicates the materials to be used on site are not frost susceptible, with occasional low plasticity results indicating frost susceptibility. Further testing would be necessary to determine the risk overall though only about 9% of the samples tested suggest the materials to be frost susceptible.

7.9 Excavations and Dewatering Risk and Requirements

Groundwater monitoring has identified shallow groundwater within the Glacial Till. During cut operations and foundation excavations in the northern part of Units 1 and 2, shallow groundwater may be encountered for which an allowance will be necessary to control water, the details of which will need to be confirmed by both the permanent and temporary works designers. The relevant discharge permits will also be required.

The advice should be sought of a specialist hydrogeologist and dewatering expert should be sought.

During trial pitting the CLAY across the site proved to be generally stable and limited inflows of water were noted.

8 EARTHWORKS

The following section is discussed in the context of the Manual of Contract Documents for Highways works, Volume 1, Series 600 Specification for Highways works.

8.1 Earthworks Considerations

The earthworks testing and site investigation data so far indicate that the highest risk earthworks material comprises the Made Ground due to its highly variable nature and moisture content and so will prove to be challenging should wholesale re-engineering be proposed.

The prospective earthworks contractor will need to carry out their own investigations to gain further understanding of the nature of the Made Ground soils and from such works make appropriate allowance for any processing measures considered necessary.

The re-use by improvement of the Made Ground on site can be considered by excavating it, moisture conditioning of the same and then re-compacting it.

Lime and or cement stabilisation will be required to a high proportion of Made Ground where it is excavated for re-use. Selected near surface natural materials (Glacial Deposits and weathered PMCM) proposed for re-use will also be subject to moisture conditioning for the performance requirements to be met. A programme of suitability and design testing would need to be carried out to confirm stabilisation mix designs in accordance with the recommendations presented in Design Manual for Roads and Bridges Volume 4 Section 1 Part 6 – HA74/04.

Groundwater is generally shallow and so much of the deeper Made Ground is below groundwater and thereby only accessible for excavation if groundwater is controlled (even though groundwater inflows were low in trial pits).

As a guide to the 'excavatability' of the limited area in the northeast parts of Units 1 and 2 based on the logs it is expected that PMCM will require 'easy' ripping techniques for the shallow extremely

Based on current groundwater data groundwater levels are generally below 1.4 m from existing ground levels and in some areas shallower groundwater is present, particularly during prolonged periods of inclement weather.

Further earthworks classification testing of the onsite materials will be needed for design purposes though currently majority of Made Ground (Glacial Till and weathered PMCM mixtures) with those natural soils (Glacial Till, Weathered Weathered PMCM) are expected to classify in grading terms mostly as a Classes 2 and 7 material.

The engineered fill proposed at the subject site is expected to be subject to end product performance requirements rather than method compaction and so a preliminary guide to SHW Appendix 6/1 is presented below, though is subject to design development.

Moisture content control during earthworks will be of importance for materials used as Class 7A1 soils as the acceptable moisture content window is likely to be in a window of approximately 4 % in order to meet the class 7A1 end product compaction criteria.

It should be noted that the actual earthworks classification of a particular material is dependent on its grading, other material parameters (detailed in Table 6/1 of Series 600) AND on how the materials are used and compacted. Material classification is not solely based on the material properties.

Presented below are limits for incorporation into Table 6/1 of an earthworks specification for Class 7A1, 6N or 6P materials are given in the table below. Note that a full earthworks design and specification should be prepared as part of detailed design works.

Table 21 SHW- Table 6/1 Class 7A1 requirements

Class	General Material Description	Typical Use	Permitted Constituents (All Subject to Requirements of Clause 601)	Material Properties for Acceptability (in Addition to use of Fill Materials in Clause 601 and Testing in Clause 631)				Compaction Requirements, Table 6/4 of SHW Series 600, Clause 612
				Property (See Exemptions in Previous Column)	Defined & Tested in Accordance with:	Acceptable Limits Within:*		
						Lower	Upper	
7A1	Selected Cohesive Fill	Fill to structures	Any material or combination of materials, other than argillaceous rock and materials designated as Class 3 in the Contract	(i) grading (ii) mc (iii) Plasticity Index (iv) Liquid Limit (v) Undrained shear strength by hand shear vane	BS 1377: part 2 BS 1377: part 4 BS1377: Part 2 BS1377: Part 2 BS 1377: part 7	Tab 6/2 To suit end product 75 kPa	Tab 6/2 To suit end product 45 - 65	End product: Minimum requirement of 100 % of maximum dry density of BS1377: Part 4 (2.5kg rammer method) or a dry density corresponding to 5 % air voids at field moisture content whichever is lower. 90 % of results to achieve dry density/ air voids/ requirement and no result to fall below 10 % air voids or 90 % maximum dry density. Plate bearing test on 600 mm dia plate to settle less than 4 mm across stress range zero to 200 kN/m^2

9 SUMMARY AND RECOMMENDATIONS

The findings of the current investigations can be summarised as follows:

1. The site occupies a parcel of land approximately 12.5 Hectares (ha) and is largely level at c. 35 m Above Ordnance Datum (AOD), divided into six portions primarily by hedgerows, and is used by the general public with footpaths and bridleways going through site;

2. The site is underlain by Glacial Till overlying weathered then Pennine Middle Coal Measures rock. Made Ground is present across most of the site, some it is suspected under license by neighbouring developer(s);

3. The Made Ground in places is up to 5.3 m depth and is variable composition and strength. Glacial Till is predominantly cohesive and firm to stiff. Weathered Pennine Middle Coal Measures mainly stiff to very stiff CLAY. Pennine Upper Coal Measures rock is generally extremely weak and very weak, though siltstone and sandstone horizons are locally strong and very strong;

4. The Worsley 4 Foot coal seam subcrops on the site and has been positively identified in RC107 at an elevation of 28.40 m AOD. The seam dip has been calculated to be about 7 degrees and in a southerly direction. Loss of flush, poor recovery during drilling and evidence from drilling on the site to the east has confirmed provisionally the dip angle and direction. The published dip of the seam is 11.3 degrees in a southerly direction;

9. A former mineshaft is located close to the southern boundary though its treatment details are not known; conveyance recorded 18-Dec-2009 to Peel Investments (North) Limited. Site investigation and assessment of the risks posed by the mine shaft is expected to be part of a detailed investigation;

10. Although groundwater has generally not encountered during drilling instruments installed have identified a variable groundwater regime in the underlying PMCM, a groundwater regime appears within the Glacial Till at an average of 1.4 m below ground level;

11. There have been no soil contaminant exceedances in soil, though some additional testing is underway;

12. Based on the current gas monitoring information, the site overall is Characteristic Situation 2 for ground gas however this should be reassessed once earthworks have been completed;

13. Made Ground extends across most of the site and is not suitable without treatment to support the development loads without risk of unacceptable settlements taking place. The excavation and moisture conditioning of Made Ground where it is below structures is considered to be the better option though limited use of ground improvement techniques such as High Energy Impact Compaction or Rapid Impact Compaction may be considered;

14. Both Made Ground and localised areas of natural ground will need moisture conditioning with lime or cement to be compacted to a suitable performance specification;

15. Engineered fill will need to be placed to a suitable stiffness (15 MN/m^2) provide a suitable allowable bearing capacity and limit differential settlement;

16. Traditional pad foundations are expected to be suitable for the site once Made Ground has been treated and any higher moisture content natural materials have been conditioned and re-compacted to a performance specification with a drained stiffness of 15 MPa;

17. Piled foundations are not expected to be necessary unless the development is not subject to ground improvement or structures have exceptionally high loads;

18. Equilibrium CBRs of between 3 and 4 % are considered appropriate for all material types. Further testing is needed to confirm materials are non-frost susceptible;

19. Shallow groundwater means dewatering techniques may be needed for which the advice of a specialist hydrogeologist and dewatering expert should be sought;

20. The site currently classifies as DS-1 though further testing is considered appropriate to confirm this classification; and

21. The majority of material on site classifies as Class 2 or 7 material for earthworks and is to be confirmed by detailed investigation.

9.1 Recommendations

1. Site investigation and assessment of the risks posed by the mine shaft on the south east boundary is expected to be part of consultation with the client, Coal Authority and a detailed investigation;

2. The Worsley 4 Foot coal seam has been worked-out across the site and has been identified provisionally using ‘loss of flush’, ‘poor recovery’, neighbouring investigation data and the evidence from RC107 which identified a pillar at a Dip angle of 7 degrees in a southerly

direction which is less than the published dip of 11.3 degrees. Further investigation is necessary to confirm the dip and the scope of the grouting works which are more substantial at the lower dip angle and so are conservative currently;

3. Further trial pitting for earthworks classification testing is considered necessary where Made Ground thicknesses have been identified in the northern parts of the site. Some boreholes also identified poor recovery and so implies softer zones at the base of Made Ground at the interface of either Glacial Till Deposits or Pennine Middle Coal Measures, and are largely concentrated within about 100 m south of the conjectured Worsley 4 foot subcrop. Such poorer materials will need to be assessed further to determine their extent so that a decision can be made regarding their treatment by grouting or by ground improvement. The further assessment can be achieved by trial pits and shallow cable tool boreholes, though there may be an opportunity to use CPTs or dynamic probing; and

4. Taking all monitoring data into consideration, an overall Characteristic Situation of 2 is considered appropriate for the site given the recorded carbon dioxide levels across the site and maximum volumetric flow rate calculated within borehole RC102. Nevertheless, ground gas monitoring should be undertaken both during and post completion of any earthworks to confirm that this remains appropriate.

APPENDIX C - FIELDWORK METHODOLOGY

Cable Percussion Boreholes

Cable percussion boreholes were put down at the locations shown on the exploratory hole location plan (Appendix B) using a standard cable percussion drilling rig (Figure C1). Details of the Cable percussion drilling method is described in the following sections.

Figure C1: Typical Cable Percussion Drilling Rig

The boreholes are formed in 150 mm diameter using conventional light cable percussion techniques. In cohesive soils a clay cutter is used which involves dropping the tool into the clay and recovering the sample wedged inside the tool. In granular deposits a “shell” is used to advance the borehole. This operates efficiently only in the presence of water which is added to the borehole if the ground is dry. The shell is then “surged” by moving up and down by around 300 mm which has the effect of loosening the bottom of the borehole and causing the soil to go into suspension. Dropping the shell on the bottom of the borehole then forces the loosened soil up the tube of the shell, past a non return valve (or clack valve) allowing the sample to be recovered. The casing is advanced with the borehole in granular soils under its own weight or by driving.

Standard penetration testing is carried out in accordance with BS5930: 1999 using a split spoon sampler in cohesive soils and a solid 60 degree cone in granular materials. The tests are carried out generally at 1 m intervals in granular materials and generally at 2 m intervals in cohesive materials with occasional variations at the direction of the supervising engineer. The results of the standard penetration tests are presented as uncorrected "N" values on the borehole logs.

102 mm diameter "undisturbed" (U100) samples are recovered at 2 m intervals in cohesive deposits to allow detailed description and or laboratory testing to be carried out although the sampling frequency can vary. The samples are sealed with wax shortly after recovery to prevent moisture loss and stored at a temperature of greater than 4 degrees (to avoid freeze thaw effects) until despatch to the laboratory for testing. Records of U100 samples are presented on the borehole logs.

Small and bulk disturbed samples are recovered at regular intervals in each of the boreholes for logging and testing purposes as noted on the exploratory hole logs.

On completion of the boring 50 mm internal diameter groundwater monitoring wells may be installed in selected boreholes as detailed on the exploratory hole logs which are typically completed with a lockable stop cock cover concreted into place.

Full details of the borehole including soil descriptions to BS 5930, SPT test results and samples recovered are presented on the exploratory hole logs.

Rotary Boreholes

Rotary drilling techniques are used in hard ground and if carried out their locations are shown on the exploratory hole location drawing.

The rotary holes are carried out using a tracked or lorry mounted drilling rig using open hole and coring techniques. For drilling on environmental sensitive sites "Clean drilling" techniques are adopted by advancing the borehole through previously drilled cable percussion boreholes which had been sealed with a bentonite seal placed at the sensitive interface- typically between the Made Ground and natural deposits. 155 mm diameter temporary rotary casing is then advanced through the seal and the drilling advanced using a rock roller and Odex casing system to advance the boreholes down to the desired depth.

Rock is cored using a 412 core barrel with coreliner to produce cores of nominal 76 mm diameter. Standard penetration tests (SPTs) can be undertaken at selected depth intervals between core runs. Core runs are a maximum length of 3 m but commonly 1.5 m and cores are placed in wooden core

boxes for protection during transportation and storage. The core boxes are sent to DCE's offices for photographing, logging and sub-sampling.

Rock core is logged to BS5930 including details of Total Core Recovery (TCR), Solid Core Recovery (SCR), Rock Quality Designation (RQD) and Fracture Index (FI). Full details of the rotary boreholes are presented on the exploratory hole logs.

Dynamic Continuous Sampling Boreholes

The locations of the Dynamic continuous sampling boreholes are shown on the exploratory hole location plan. They are put down using a Competitor Dart Drilling rig (Figure C2).

Figure C2: Competitor Dart Rig

The sampling is progressed by driving a hollow steel tube with a plastic inner liner into the ground. Both cohesive and granular soils are "wedged" into the tubing, relying on the friction between the soil and liner to retain the sample on withdrawal of the tubing. Sample can be lost, particularly in loose granular soils if frictional resistance is not sufficient. The technique can be used in the absence of casing in cohesive soils, although the diameter of tubing is progressively reduced from 101 mm, through 92, 79, 70, 57 and 47 mm dia to ensure that frictional resistance on the sides of the sampling tubing does not exceed the capacity of the equipment to pull the tubing from the hole. Small diameter 115 mm diameter casing can be driven simultaneously with the sampling tube in soft or loose soils

to a maximum depth of around 7 m. Standard penetration testing and recovery of "undisturbed" samples is possible in the correct conditions.

Full details of the dynamic continuous sampling holes including soil descriptions to BS 5930, SPT test results and samples recovered are presented on the exploratory hole location plan.

Trial Pitting

Trial pits are typically machine excavated using a JCB 3CX type mechanical excavator. Where hard surfacing is present at the trial pit locations, a hydraulic breaker attachment is used to penetrate the layer and allow subsequent excavation using either a 600 mm or 900 mm wide toothed excavator bucket. Excavation is progressed slowly to allow inspection of the geology revealed and samples were recovered at the discretion of the supervising engineer for subsequent laboratory analysis.

Excavations are typically taken to a maximum depth of 4 m bgl or in the event of obstructions or shallow groundwater being present, excavations are terminated at shallower depth. On completion, the trial pits are backfilled with lightly compacted arisings, tamped into place using the knuckle of the excavator bucket.

Full details of the trial pitting including soil descriptions to BS 5930 including details of samples recovered are presented in Appendix D

Gas and Groundwater Monitoring

Gas monitoring is carried out using a Gas Data GFM430 infra red gas analyser to record concentrations of Carbon Dioxide, Oxygen, Methane and record atmospheric and downhole pressures together with borehole gas flow rates.

Prior to groundwater sampling, each borehole is purged and insitu readings recovered for pH, temperature, electrical conductivity, dissolved oxygen and redox potential. Samples are recovered once the parameters measured had stabilised.

Rising head permeability testing is commonly carried out in the boreholes on a return visit to site.

Details of any gas and groundwater monitoring or permeability testing is presented in Appendix D.

Ordnance Survey National Grid and the details of surveys are presented on the exploratory hole log drawing and on the exploratory hole logs.

Dear Recipient,

Following on from my previous email, please find attached documents to accompany the submission of a planning application for Land at Astley Park Way under the application number A/23/96226/DCINV, following a letter of invalidation received on 27/10/23. Due to attachment size limits within outlook the documents will be sent, split across several emails.

This email contains documents which were above the 10mb limit for document submission, these documents are listed below:

Flood Risk Assessment Part 1 of 3
Flood Risk Assessment Part 2 of 3
Flood Risk Assessment Part 3 of 3

Kind Regards,

[redacted]

1 INTRODUCTION

BE Design have been appointed by PLP Logistics Ltd. to prepare a Flood Risk Assessment (FRA) in support of a planning application for a proposed commercial development off Chaddock Lane, Astley, Wigan. The proposed development site has a National Ordnance Survey (OS) Grid Reference of SD708011 for the approximate centre of the site.

The site formed part of a wider mixed-use scheme which was granted outline planning permission through application A/15/81365/OUTMAJ in 2015, the outline application included the residential areas to the northwest and east of the proposed site, which were completed; and an industrial area on the current proposed site, which was not completed. As part of the outline application an FRA and Drainage Strategy Report was produced by Thomasons Consulting, this report can be found in Appendix D, the residential areas were developed in accordance with this agreed strategy and the proposals put forth in this report have been produced in accordance with the principles of the strategy set out for the wider development by Thomasons Consulting.

The objective of this report is to provide the Local Planning Authority (LPA) with sufficient information to consider flood risk during the planning process. This report is written in accordance with the requirements set out in National Planning Policy Framework (NPPF, dated July 2021) and the National Planning Practice Guidance (NPPG, dated June 2021).

This report will assess the risk of flooding from different sources to the development and will also include drainage strategy proposals that will ensure no increase in flood risk to the surrounding development.

2 DEVELOPMENT DESCRIPTION

2.1 Site Location

The site is located approximately 500m to the east of Astley village and 12km southeast of Wigan town centre. The site is bounded by Chaddock Lane to the south and Garrett Lane to the north.

A location plan with an approximate red line boundary is shown in Figure 1.

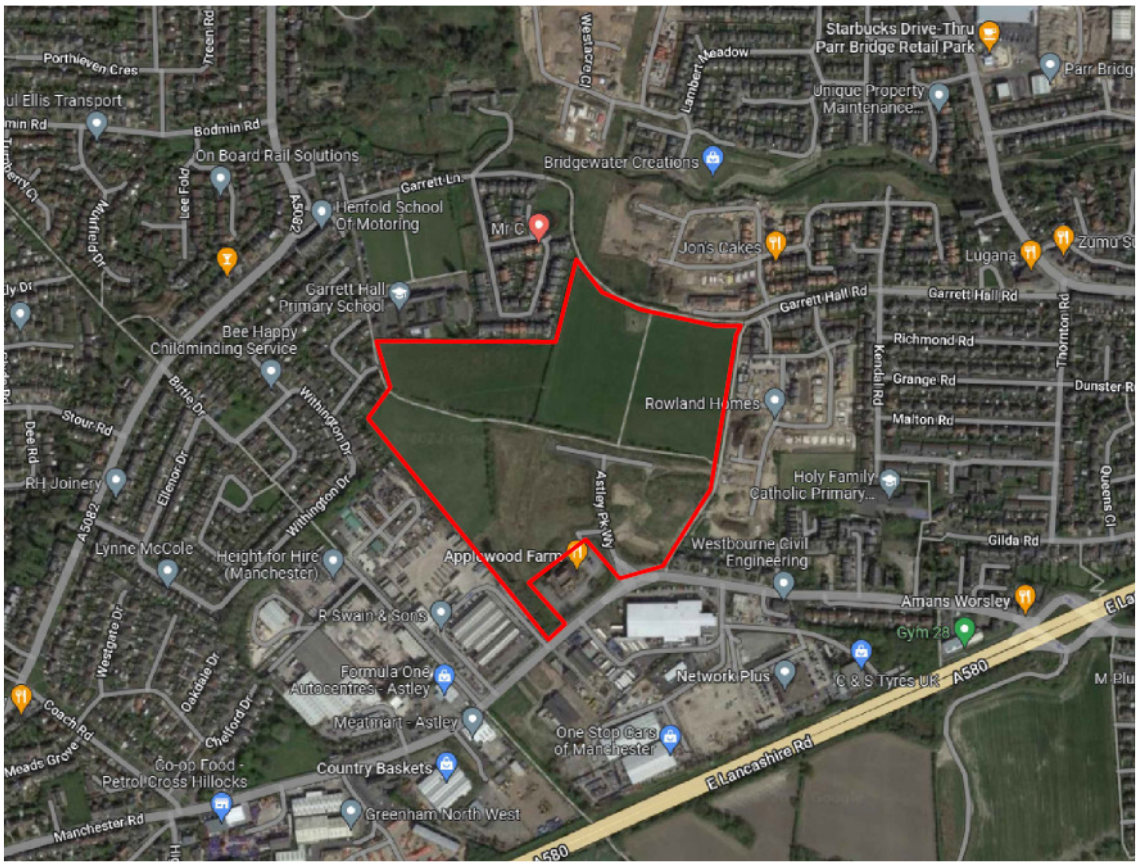

Figure 1 – Location Plan

2.2 Existing Site

The application site is approximately 12.6 hectares in total area and is irregular in shape. The site is bound to the north, east and west by residential estates, and to the south by industrial and commercial units. The majority of the site is currently disused and can be considered a greenfield site. A spine road has been constructed within the site as enabling works to serve future development, the spine road also provides access into the car park of an existing pub known as Applewood Farm located at the south of the site which borders the development boundary. A small ditch network passes through the centre of the site, falling in a south westerly direction, before outfalling into a culvert. This ditch network runs parallel to a public footpath running in an east-west direction through the centre of the site, with a perpendicular branch connecting the footpath the roads to the north (Garrett Lane) and south (Chaddock Lane).

A topographical survey was undertaken by Tower Surveys in March 2022. The site broadly falls from northeast to southwest with levels ranging between 47m AOD and 38m AOD across the site. Localised depressions and detention basins are located in the central and southern areas of the site.

A copy of the topographical survey by Tower Surveys can be found in Appendix A.

A 36" steel high pressure gas main runs through the middle of the site in a north-south direction.

2.3 Existing Drainage

Surface water drainage on the site is currently managed by a system of historic dry ditches, which pick up the runoff from the fields. This ditch network discharges to a culvert at the south of the site, which connects to the public sewer within Chaddock Lane. A series of small detention basins in the central and southern areas of the site are also utilised to manage the surface water runoff. The basin to the southwest of the site connects to the ditch and acts as an offline detention basin to manage surface water flows in events which exceed the capacity of the outfall.

The spine road is drained via gullies which discharge through buried pipes into shallow ditches running alongside the spine road. These ditches subsequently discharge into the small detention basins located within the centre of the site and to the southeast of the site.

The central basin solely serves to attenuate flows from the top section of the spine road and connects to the outfall ditch via a flow restricting chamber whilst the detention basin to the southeast serves to attenuate flows from the main part of the spine road and also serves the site to the east via a 525Ø pipe which discharges into the eastern side of the basin, this basin discharges into the buried surface water pipe network via a flow control chamber located within the bellmouth which then runs southwest alongside Chaddock Lane.

A foul water pipe network was installed beneath the spine road to serve the future development, two stubs are provided to the east and west at the head of the spine road, whilst connections are made from the pub and from the site to the east into a manhole located within the bellmouth providing access to the pub. The foul pipe connects to a manhole located within Chaddock Lane adjacent to the main site bellmouth.

2.4 Proposed Development

The planning application is for the development of 4no. industrial units with associated access roads, car parking and HGV service yards. The proposed finished levels for the units will be approximately 36.7m- 42.5m AOD to complement the existing site topography and surrounding features. It is estimated that the development will generate circa 7.2ha of impermeable area.

The proposed site layout plan can be found in Appendix C.

3 PLANNING POLICY

3.1 National Planning Practice Framework (NPPF)

The flood maps provided by the Environment Agency (EA) locate the site wholly within Flood Zone 1, i.e. land having a less than 1 in 1000 annual probability of river or sea flooding. The flood zone map with an approximate red line site boundary is provided in Figure 2 below.

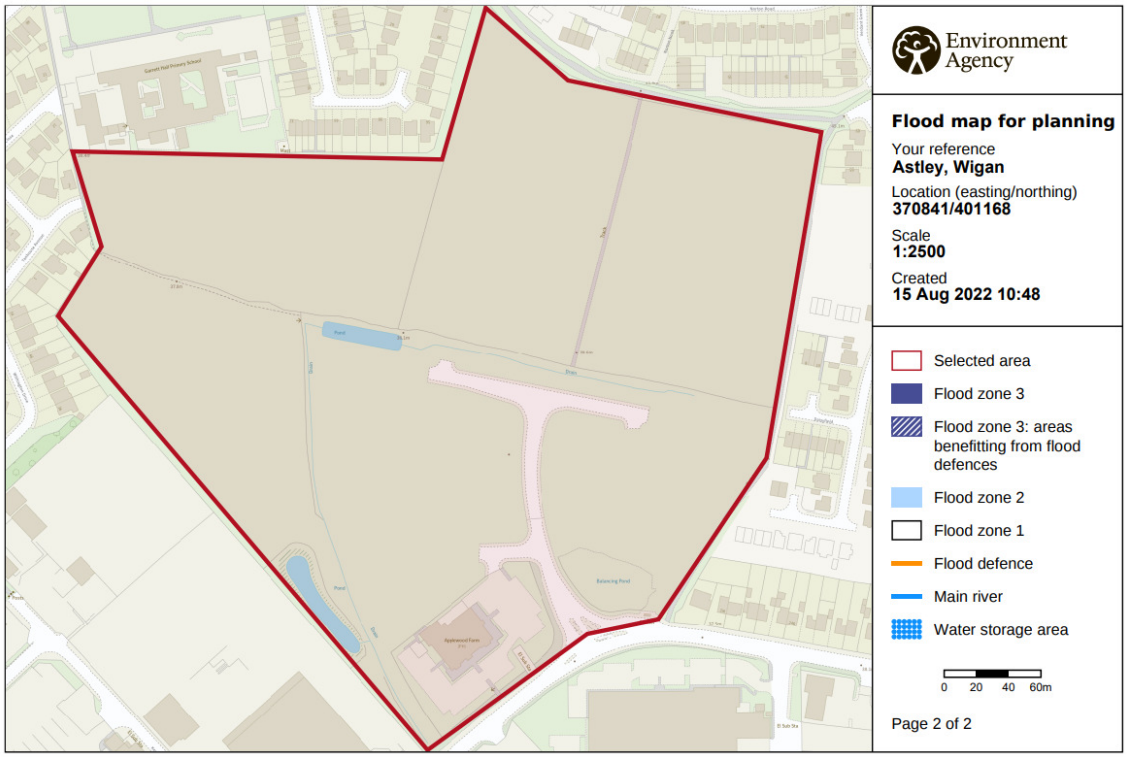

Figure 2 – Extract from the EA Showing Flood Zone Classification

Under the NPPF (2021), the preference is to steer new development to Flood Zone 1 areas with a low probability of river and sea flooding. As the proposed development is located within Flood Zone 1, this is ideal and there is no requirement to undertake a Sequential Test.

According to Table 1 and Table 2 of the Planning Practice Guidance: Flood Risk and Coastal Change, the proposed development is classed as 'Less Vulnerable' development. Extract of the tables are reproduced below:

More vulnerable

- Hospitals
- Residential institutions such as residential care homes, children's homes, social services homes, prisons and hostels.
- Buildings used for dwelling houses, student halls of residence, drinking establishments, nightclubs and hotels.
- Non–residential uses for health services, nurseries and educational establishments.
- Landfill* and sites used for waste management facilities for hazardous waste.
- Sites used for holiday or short-let caravans and camping, subject to a specific warning and evacuation plan.

Less vulnerable

- Police, ambulance and fire stations which are not required to be operational during flooding.
- Buildings used for shops; financial, professional and other services; restaurants, cafes and hot food takeaways; offices; general industry, storage and distribution; non-residential institutions not included in the 'more vulnerable' class; and assembly and leisure.
- Land and buildings used for agriculture and forestry.
- Waste treatment (except landfill* and hazardous waste facilities).
- Minerals working and processing (except for sand and gravel working).
- Water treatment works which do not need to remain operational during times of flood.
- Sewage treatment works, if adequate measures to control pollution and manage sewage during flooding events are in place.

Table 1 – Flood Risk Vulnerability Classification

Flood Zones	Flood Risk Vulnerability Classification				
	Essential infrastructure	Highly vulnerable	More vulnerable	Less vulnerable	Water compatible
Zone 1	✓	✓	✓	✓	✓
Zone 2	✓	Exception Test required	✓	✓	✓
Zone 3a †	Exception Test required †	✗	Exception Test required	✓	✓
Zone 3b *	Exception Test required *	✗	✗	✗	✓*

Key:

✓ Development is appropriate

✗ Development should not be permitted.

Table 2 – Flood Risk Vulnerability and Flood Zone 'Compatibility'

Based on the above, the proposed development is appropriate, and the Exception Test is not required.

4 FLOOD RISK ASSESSMENT

The NPPF requires the developer to consider the impact of runoff generated by the proposed development onto the downstream catchment and to assess the risk of runoff from the surrounding district impacting on the development's footprint. This report considers the flood risk from all other sources and the following sections outline the various flood risk receptors and anticipated flood risk.

4.1 Flooding from Sea (Tidal)

The development is outside the risk of tidal flooding due to its inland location and high ground levels.

4.2 Flooding from Rivers (Fluvial)

Ellenor Brook passes through adjoining land approximately 100m north of the site. The EA flood mapping indicates that the site is not at risk of flooding from the Ellenor Brook. It also shows the site is located within Flood Zone 1, having a less than 1 in 1000 annual probability of river flooding. Therefore, the risk of flooding from rivers is considered very low. Environment Agency river flood risk mapping is shown in Fig 3 below.

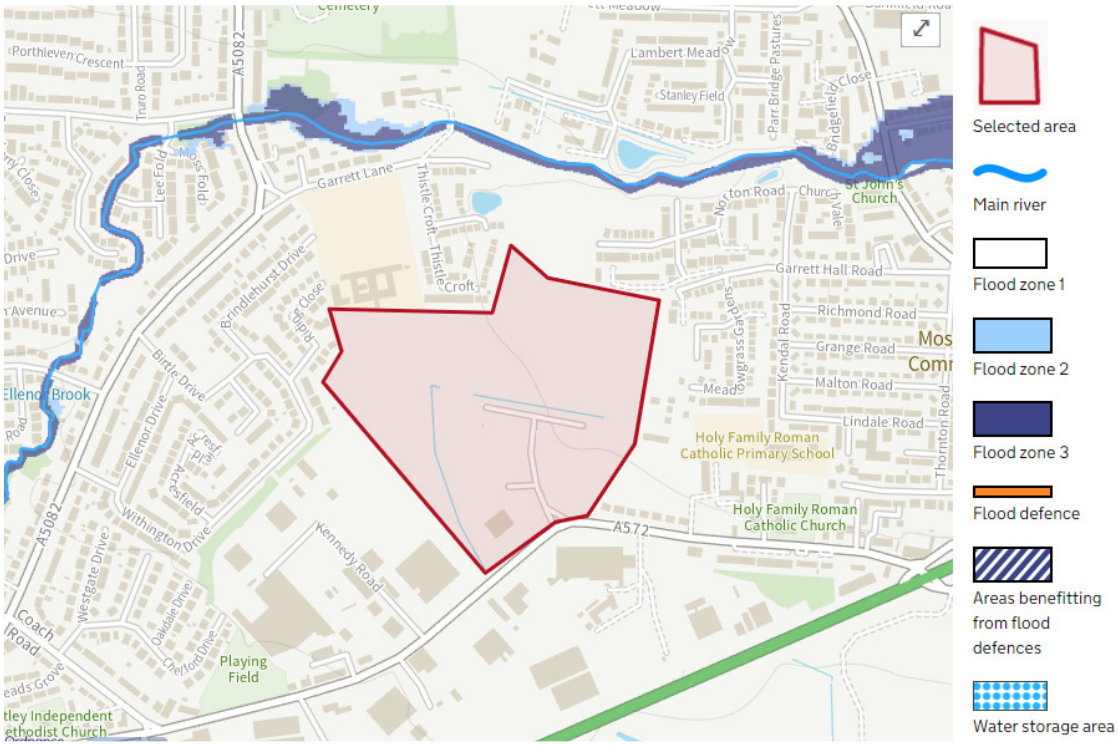

Figure 3 – Extract showing flood risk from Rivers

4.3 Flooding from Surface Water (Pluvial)

The EA flood map for surface water (Figure 4) classifies the majority of the site as having a 'Very Low' risk of surface water flooding.

Localised areas of 'Low' to 'High' risk surface water flooding are noted on the map. These areas of 'Low' to 'High' risk coincide with the depressions and ditches in the central and southern area of the site. This risk will not be applicable once the development is in place as the development will remove these features.

Overall, the surface water flood risk to the development can be considered 'Very Low'.

Figure 4 - Extract Showing Flood Risk from Surface Water

4.4 Flooding from Sewers

The Thomasons Existing Drainage Infrastructure Drawing (7305-FRA-001) highlights two nodes of an existing 150mm diameter foul sewer which runs along Chaddock Lane then enters from the south of the site, then branches at the end of Astley Park Way. There are no other public sewers within the site. This can be found in Appendix E.

Beyond the site, there is a 375mm diameter combined water sewer passing east to west north of the site. There are also foul and surface water sewers serving the adjacent residential areas to the east and west. To the south, a surface water drain runs west within Chaddock Lane.

We have not been made aware of any sewer flooding during our enquiries. Therefore, the risk of sewer flooding to the site is considered low.

4.5 Flooding from Groundwater

Investigations have not indicated any historic flooding due to groundwater. Findings from recent ground investigation conducted by Discovery CE Ltd. can be found in Appendix F. It found from the 6 rotary holes a variable groundwater has been recorded from 0.64m to 6.94m deep. The data suggests that a discrete shall ground water table (average 1.4m depth) is present.

Therefore, the risk of ground water flooding to the site is considered low.

4.6 Flooding from Reservoirs

Environment Agency reservoir flood risk mapping is shown in Figure 5, below. The mapping confirms the site is not at risk of flooding from reservoirs.

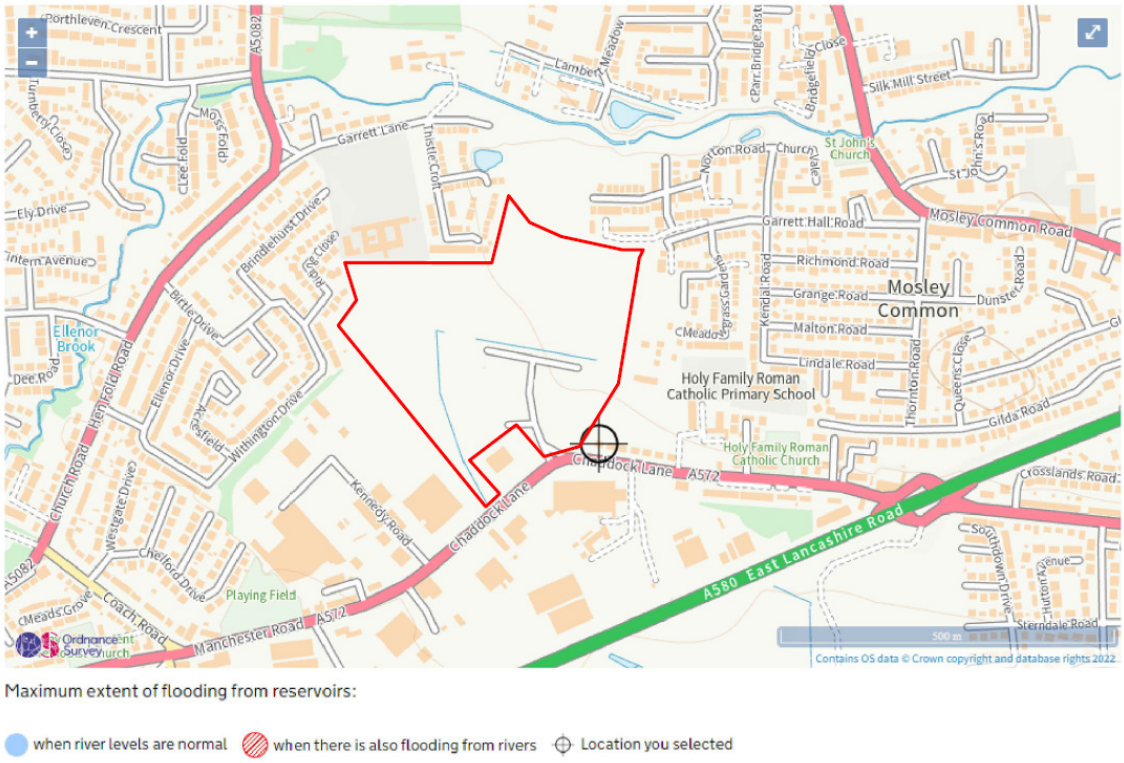

Figure 5 – Extract Showing Flood Risk from Reservoirs

4.7 Flooding from Artificial and Other Sources

No other artificial sources such as canals or other water bodies have been identified in the vicinity of the site to pose a flood risk.

5 DRAINAGE STRATEGY

5.1 Drainage Strategy

The FRA and Drainage Strategy prepared by Thomasons in support of the outline planning application, is included within Appendix D. Within the report, drawing no. 7305-FRA-002 details the Outline Drainage Strategy for the whole of the development site, the application site is positioned centrally within the wider development with an area of residential housing to the east and a further area of residential housing to the north both of which have undergone construction. The development proposals for the application site have evolved since the outline strategy was developed and the proposed drainage strategy has been developed to serve the requirements of the Site Layout Proposal produced by pHp architects included within Appendix C, although the strategy for the discharge point and restricted discharge rate remains in accordance with the Outline Drainage Strategy. The Thomasons report and drainage strategy was developed on the basis that infiltration was not feasible, this is confirmed by the ground investigation report carried out by Discovery Geotechnical & Environmental Engineers which identifies a stratum of clay.

The high-level drainage strategy has been defined within this FRA to ensure that Flood Risk is not increased to the development or surrounding the areas, this strategy is to be complied with in the developed proposals for the surface water drainage system.

5.2 Drainage Design Criteria

The surface water drainage system shall be designed with consideration to the requirements of the reports and guidance documents listed below where applicable:

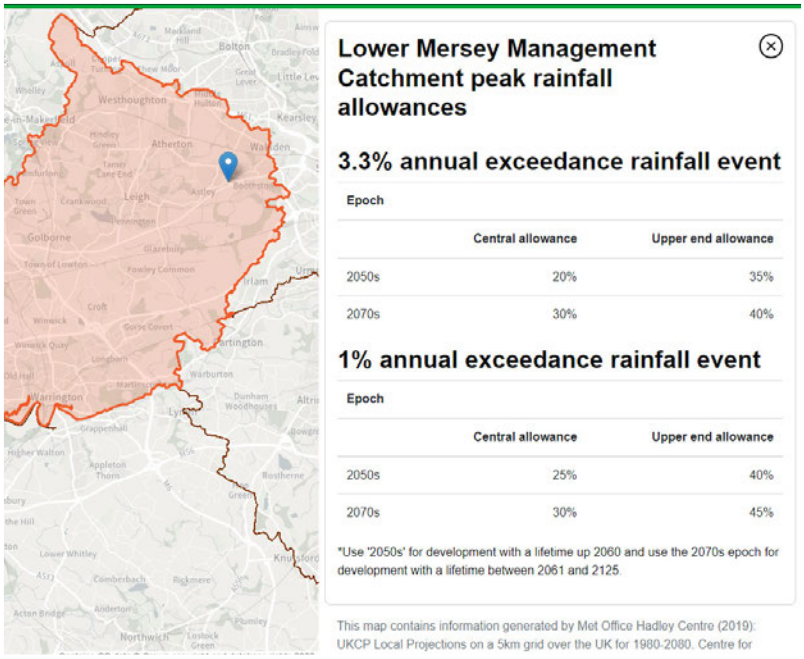
- Thomasons Flood Risk Assessment PMG/MB/7305/1
- Wigan Council Local Flood Risk Management Strategy
- Ciria Report C753 SuDS Manual
- National Planning Policy Framework

5.2.1 General Drainage

M5-60 = 18.60mm
Ratio_R = 0.340
CV = 0.750

The drainage criteria for surcharging and flooding shall be in accordance with the standards as defined below:
On-Site Standards:

- No Surcharge up to 1 in 2-year return period
- No Flooding up to 1 in 30-year return period
- Minor Flooding up to 1 in 100 YR+CC to be contained on site
- Overland flow paths to be defined for flooding in exceedance events



Off-Site Standards

- No off site flooding up to 1 in 100YR+CC
- Overland flow paths to be defined to avoid compromising adjacent buildings/sites

5.2.2 Climate Change

Rainfall rates for the 1 in 100-year + climate change return period will be increased by 40% to allow for the effects of climate change.

Climate change peak rainfall allowances for rainfall events have been checked using the gov.uk online map. The proposed development falls into the 2050's category, the upper end allowance of 40% representing the 95th percentile has been used for the 1% annual exceedance rainfall event.

5.2.3 Proposed Discharge Rate

The Thomasons drainage strategy confirms the calculated greenfield (Qbar) runoff rate for the development site and the area of residential housing to the east as 70.90l/s for the allocated impermeable site area of 11.65ha equating to a runoff rate of 6.86l/s/ha. The residential housing to the east equates to a site area of 3.97ha utilising 24.2l/s of the allocated discharge rate (3.97/11.65 x 70.90 = 24.2l/s), leaving 46.7l/s allocated to the impermeable area of the development site.

A greenfield runoff assessment has been carried out to check the values within the Thomasons strategy. The assessment has been carried out using Causeway Flow Pre-development discharge calculation tool and is included in Appendix G, the assessment confirms the value of 6.086l/s/ha specified within the Thomasons report is correct.

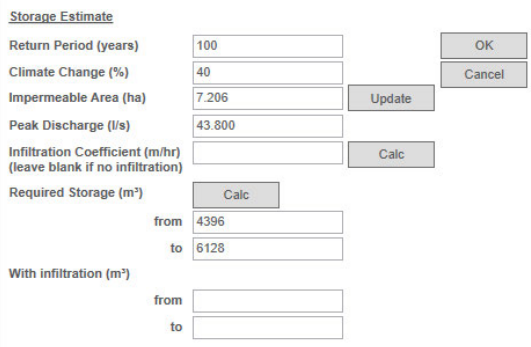
The proposed development has an impermeable area of 7.203ha as shown on the BE Design Proposed Catchment Area Layout drawing WIGAN-BED-ST-00-DR-C-0305 included within Appendix H. The allowable discharge rate for the development has been calculated as 43.8l/s.

7.203ha/11.65ha x 70.90l/s = 43.8l/s

5.2.4 Proposed Drainage Layout

A new surface water drainage system is to be constructed to convey runoff from the impermeable surfaces on the four building units as well as the site access road, the proposed drainage schematic is included within Appendix H. The surface water drainage system is required to attenuate and convey the runoff to the existing outfall located to the southern point of the site to the southwest of the existing pub and gas main.

The surface water drainage system is required to cross the gas pipe which runs through the centre of the site in order to convey runoff from units 1, 3, 4 and the access road to the outfall, the constraint of tying into the outfall invert level means the crossing must be over the top of the gas main towards the south of the site to enable a gravity connection to be achieved as the gas main generally rises along its length from south to north, the viability of crossing the gas main in various locations has been assessed and two locations have been identified as the most viable crossing points, one to the south of unit 3 and one in the location of the access to unit 2.



The existing detention basin located in the southeast of the site is to remain unchanged, existing access road drainage which discharges into this basin is to be left unchanged where the access road and drainage ditch are unmodified, this area has been excluded form the catchment assessment, where the access road is modified by the new development the runoff has been included in the new drainage system therefore the catchment in to this existing basin has been reduced.

The existing detention basin and drainage ditch leading to the outfall are to be utilised in the new drainage system if possible to reduce the amount of buried attenuation required and provide SuDS benefits.

5.2.5 Attenuation and Flow Requirements

Due to spatial constraints on the proposed site layout, it is proposed to provide surface water attenuation in the form of buried tanks within the service yard areas of each unit. Flows from each unit will be restricted to the equivalent greenfield runoff rate using flow controls on the outgoing manhole to keep the depth of the attenuation system to a reasonable level.

The total storage volume has been estimated using the Causeway Flow Storage estimate tool based on the total impermeable area and restricted discharge rate, the require volume is estimated between 4396m³ and 6128m³ as shown in the snippet below. The storage and allowable discharge is to be split pro-rata between the building units.

5.2.6 Exceedance Flow Path

Surface water overland flow paths are to be defined for events exceeding the design capacity of the drainage or in the event of blockage, the proposed site levels and overland flow paths are to be defined to replicate the existing site levels and flow path. Exceedance flows will flow towards the south-west of the site to the location of the outfall.

5.2.7 SuDs

The philosophy of Sustainable Drainage Systems (SuDS) is about maximising the benefits and minimising the negative impacts of surface water runoff from developed areas. The SuDS approach involves slowing down and reducing the quantity of surface water runoff from a developed area to manage downstream flood risk and reducing the risk of that runoff causing pollution (CIRIA C753, 2015).

A Management Train is fundamental to designing a successful SuDS scheme to mimic natural catchment processes as closely as possible. The hierarchy of techniques that should be considered to reduce pollution, flow rates and volumes of storm water discharge from the site are as follows:

1. Prevention – the use of good site design and site housekeeping measure to prevent runoff and pollution and rainwater reuse/harvesting.

2. Source Control – control of runoff at or very near its source (e.g. soakaways, other infiltration methods, green roofs, pervious pavements).

3. Site Control – management of water in a local area or site (e.g. routing water from building roofs and car parks to a large soakaway, infiltration or detention basin).4. Regional Control – management of runoff from a site or several sites, typically in a balancing pond or wetland. The drainage techniques for this development will seek to include, where possible, prevention, source control and site control measures. Table 4 below provides an assessment of various above and below ground SuDS methods that can provide water quality treatment and management of flows to reduce runoff rates and volumes and whether they can be suitably incorporated at this development site.

Table 2 – SuDS Selector Table

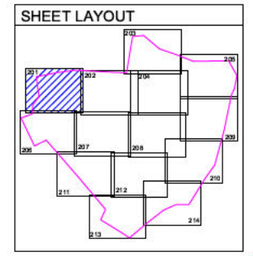
Method	Comment	Suitability for Development
Rainwater Harvesting	• Rainwater harvesting reduces the total runoff volume from the developed site and reduces treated water consumption.	*Suitable* • Potential to be installed to take some of the building roof drainage. TBC at detailed design stage.
Green Roofs	• Can be used on low rise buildings to provide retention, attenuation and treatment of rainwater, and promotes evaporation and local biodiversity.	*Not Suitable* • Large industrial buildings do not lend themselves to green roofs due to the large additional loadings.
Soakaway	• Reduces total runoff volume from the development.	*Not Suitable* • Soakaways are not suitable due to the underlying ground conditions and high water table on site.
Pervious Pavements	• Pervious surfaces together with their associated substructures are an efficient means of intercepting runoff, reducing the volume and frequency of runoff and providing a treatment medium.	*Suitable* • Potential to be installed to some of the car parking areas allowing runoff to be temporarily stored in the sub-base beneath. To be confirmed at detailed design stage.

Attenuation Storage Tanks	• Ideal for sites with insufficient space for basins etc • Provide a volume of below ground storage with a high void ratio	• *Suitable* Storage tanks in the form of large diameter tubosider is to be used to provide attenuation storage.
Detention Basins	• Provides storage of runoff and flow attenuation. • Vegetated surfaces can be used to support the prevention of runoff from the site for small rainfall events (interception) and improve water quality associated with the removal of sediment and buoyant materials.	*Suitable* • Existing Detention basin to be utilised on site to provide surface water storage.

6 Proposed Foul Water

It is proposed to install a new foul water drainage pipe network to serve the building units on site. The new pipe network should connect to the existing system at a point within the spine road utilising as much of the pipe network which has been installed as possible. The new foul pipe network is required to cross the existing gas main within the access to unit 2 allow for a gravity connection into the existing system.

7 CONCLUSION



The objective of this report is to provide the Local Planning Authority (LPA) and the Environment Agency (EA) with sufficient information to consider flood risk associated with the proposed development as part of the planning process. The report confirms the following points.

- The development proposals comprise a commercial development in Astley, Wigan with an area of 12.6ha.
- The site is located within Flood Zone 1 of the Environment Agency's Indicative flood map and is at very low risk of flooding from any source.
- The site is not at risk of flooding from any sources.
- The site satisfies the requirements of the Sequential test and is deemed to be 'Appropriate'. The exception test is not required.
- Surface water runoff is to be restricted to the greenfield Qbar runoff rate of **43.8l/s** for the proposed impermeable site area of 7.203ha
- A new surface water drainage system shall be constructed on site to convey water to the outfall.
- Surface water attenuation shall be provided within buried attenuation located within the unit service yards and within the existing detention basin located to the south of the south if possible. Storm events up to and including 1 in 100 year + 40% Climate Change shall be modelled to ensure the pipework and the detention basin are sized appropriately to avoid any flooding on site.

GRID NORTH

SHEET LAYOUT

NOTES

1. SURVEY CONTROL:

A) SURVEY GRID (HORIZONTAL):

THIS SURVEY IS ORIENTATED TO ORDNANCE SURVEY GRID NORTH. THE SURVEY IS TO A PLANE GRID. HORIZONTAL MEASUREMENTS TAKEN FROM THIS SURVEY WILL BE GROUND DISTANCE.

FULL ORDNANCE SURVEY CO-ORDINATES CAN BE CALCULATED BY SCALING THE SURVEY ABOUT THE SURVEY STATION NAMED TSA08, WITH CO-ORDINATES E 370932.073 N 401197.270 AS FOLLOWS:

SHIFT: NOT REQUIRED
SCALE: LSF = 0.99961
ROTATION: NOT REQUIRED

THE LOCAL SCALE FACTOR (LSF) APPLICABLE TO THIS SITE IS 0.99961, CALCULATED USING STANDARD TABULATED DATA.

THE CONTROL HAS BEEN ESTABLISHED BY TYING INTO THE ACTIVE ORDNANCE SURVEY CONTROL NETWORK. SEE NOTE C. BELOW.

(FOR THIS RELATIVELY LOW LEVEL SITE, MEAN SEA LEVEL CORRECTIONS (MSL) ARE DEEMED TO BE INSIGNIFICANT AND HAVE THEREFORE NOT BEEN APPLIED.)

B) VERTICAL DATUM

ALTITUDES FOR THE CONTROL HAVE BEEN CALCULATED FROM GNSS DERIVED HEIGHTS AND CONVERTED TO ORTHOMETRIC HEIGHTS (ORDNANCE DATUM NEWLYN - ODN) NEW OS NET USING OSGM15 TRANSFORMATION PARAMETERS.

C) GNSS CONTROL:

THE CO-ORDINATE SYSTEM USED FOR THE PRIMARY CONTROL IS OSGB36. THIS HAS BEEN CALCULATED FROM ETRS89 NEW OS NET USING OSTN15 TRANSFORMATION PARAMETERS.

METHOD: FOR THIS PARTICULAR PROJECT, THE "TOP-NET" NETWORK RTK SYSTEM HAS BEEN USED. OBSERVATIONS HAVE BEEN TAKEN ON THE FOLLOWING DATE (S): 17.03.2022

MANUFACTURERS QUOTED ACCURACY IS RMSE 10 – 20 mm IN PLAN AND 20 – 30 mm IN HEIGHT. HOWEVER, RESULTS MAY VARY DURING THE DAY AND CERTAIN CONDITIONS COULD CAUSE DEGRADATION TO THE FINAL SOLUTIONS. FOR SALIENT CONTROL AND WHEREVER POSSIBLE AND PRACTICAL, TOWER SURVEYS ASSOCIATES HAVE USED AN OPEN SKY WITH GOOD SATELLITE GEOMETRY SO AS TO MAINTAIN THE HIGHEST ACCURACY POSSIBLE.

2. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELEVANT DRAWINGS/DOCUMENTATION.
3. CHECK SCALE BAR AND GRID BEFORE TAKING NON-FIGURED DIMENSIONS FROM THIS DRAWING.
4. IF IN DOUBT ASK.

UNLESS OTHERWISE STATED THE SURVEY STATIONS LISTED ABOVE ARE ONLY INTENDED TO BE USED FOR TOPOGRAPHICAL SURVEYS AT THE STATED SCALE.

DUE CONSIDERATION SHOULD BE GIVEN TO LONG-TERM STABILITY OF SURVEY STATION MARKERS.

GENERAL

- NO ALLOWANCE HAS BEEN MADE FOR SUB SURFACE ENTRY INTO MANHOLES OR OTHER CHAMBERS OR VOIDS BELOW GROUND LEVEL. THEREFORE ANY DETAILS RELATING TO DEPTHS, SIZES ETC. ARE TAKEN FROM ABOVE GROUND AND AS SUCH WILL BE APPROXIMATE ONLY.
- THE CONTRACTOR IS TO CHECK AND VERIFY ALL CRITICAL DIMENSIONS AND LEVELS BEFORE WORK STARTS.
- BURIED SERVICES SHOWN ON THIS DRAWING MAY BE ASSUMED ROUTES AND WILL NORMALLY BE OF UNKNOWN CONDITION. CONTRACTORS SHOULD UNDERTAKE SUITABLE VALIDATION WORK AND TAKE PARTICULAR CARE DURING EXCAVATION WORK. SAFE DIGGING PRACTICES SHOULD BE FOLLOWED.
- SHOULD THERE BE ANY CONFLICT BETWEEN THE DETAILS INDICATED ON THIS DRAWING AND THOSE INDICATED ON OTHER DRAWINGS, THEN TOWER SURVEYS ASS SHOULD BE INFORMED PRIOR TO CONSTRUCTION ON SITE.
- IT IS IMPORTANT TO NOTE THAT THE SAME ACCURACIES IMPLIED BY THE PLOTTING SCALE ARE EQUALLY APPLICABLE TO DIGITAL DATA SUPPLIED FOR CAD.
- EVERY EFFORT IS MADE TO IDENTIFY ALL VISIBLE ABOVE GROUND FEATURES. HOWEVER, IT SHOULD BE BORNE IN MIND THAT THERE MAY BE ITEMS OBSCURED AT THE TIME OF SURVEY.
- VISIBLE FEATURES IN THE VICINITY OF THE BOUNDARIES, AS SHOWN ON THIS SURVEY, MAY NOT REPRESENT THE EXTENT OF LEGALLY CONVEYED OWNERSHIP.
- UNLESS OTHERWISE SPECIFIED FEATURES SHOWN USING LINE STYLES OR HATCHING ARE INDICATIVE ONLY, SUCH AS ROAD MARKINGS, HEDGE CENTRELINES, BRICK HATCHING AND GLAZING DETAIL.

THE LOCAL SCALE FACTOR (LSF) APPLICABLE TO THIS SITE IS 0.99961, CALCULATED USING STANDARD TABULATED DATA.

THE CONTROL HAS BEEN ESTABLISHED BY TYING INTO THE ACTIVE ORDNANCE SURVEY CONTROL NETWORK. SEE NOTE C. BELOW.

(FOR THIS RELATIVELY LOW LEVEL SITE, MEAN SEA LEVEL CORRECTIONS (MSL) ARE DEEMED TO BE INSIGNIFICANT AND HAVE THEREFORE NOT BEEN APPLIED.)

B) VERTICAL DATUM

ALTITUDES FOR THE CONTROL HAVE BEEN CALCULATED FROM GNSS DERIVED HEIGHTS AND CONVERTED TO ORTHOMETRIC HEIGHTS (ORDNANCE DATUM NEWLYN - ODN) NEW OS NET USING OSGM15 TRANSFORMATION PARAMETERS.

C) GNSS CONTROL:

THE CO-ORDINATE SYSTEM USED FOR THE PRIMARY CONTROL IS OSGB36. THIS HAS BEEN CALCULATED FROM ETRS89 NEW OS NET USING OSTN15 TRANSFORMATION PARAMETERS.

METHOD: FOR THIS PARTICULAR PROJECT, THE "TOP-NET" NETWORK RTK SYSTEM HAS BEEN USED. OBSERVATIONS HAVE BEEN TAKEN ON THE FOLLOWING DATE (S): 17.03.2022

MANUFACTURERS QUOTED ACCURACY IS RMSE 10 – 20 mm IN PLAN AND 20 – 30 mm IN HEIGHT. HOWEVER, RESULTS MAY VARY DURING THE DAY AND CERTAIN CONDITIONS COULD CAUSE DEGRADATION TO THE FINAL SOLUTIONS. FOR SALIENT CONTROL AND WHEREVER POSSIBLE AND PRACTICAL, TOWER SURVEYS ASSOCIATES HAVE USED AN OPEN SKY WITH GOOD SATELLITE GEOMETRY SO AS TO MAINTAIN THE HIGHEST ACCURACY POSSIBLE.

2. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELEVANT DRAWINGS/DOCUMENTATION.
3. CHECK SCALE BAR AND GRID BEFORE TAKING NON-FIGURED DIMENSIONS FROM THIS DRAWING.
4. IF IN DOUBT ASK.

UNLESS OTHERWISE STATED THE SURVEY STATIONS LISTED ABOVE ARE ONLY INTENDED TO BE USED FOR TOPOGRAPHICAL SURVEYS AT THE STATED SCALE.

DUE CONSIDERATION SHOULD BE GIVEN TO LONG-TERM STABILITY OF SURVEY STATION MARKERS.

GENERAL

- NO ALLOWANCE HAS BEEN MADE FOR SUB SURFACE ENTRY INTO MANHOLES OR OTHER CHAMBERS OR VOIDS BELOW GROUND LEVEL. THEREFORE ANY DETAILS RELATING TO DEPTHS, SIZES ETC. ARE TAKEN FROM ABOVE GROUND AND AS SUCH WILL BE APPROXIMATE ONLY.
- THE CONTRACTOR IS TO CHECK AND VERIFY ALL CRITICAL DIMENSIONS AND LEVELS BEFORE WORK STARTS.
- BURIED SERVICES SHOWN ON THIS DRAWING MAY BE ASSUMED ROUTES AND WILL NORMALLY BE OF UNKNOWN CONDITION. CONTRACTORS SHOULD UNDERTAKE SUITABLE VALIDATION WORK AND TAKE PARTICULAR CARE DURING EXCAVATION WORK. SAFE DIGGING PRACTICES SHOULD BE FOLLOWED.
- SHOULD THERE BE ANY CONFLICT BETWEEN THE DETAILS INDICATED ON THIS DRAWING AND THOSE INDICATED ON OTHER DRAWINGS, THEN TOWER SURVEYS ASSE SHOULD BE INFORMED PRIOR TO CONSTRUCTION ON SITE.
- IT IS IMPORTANT TO NOTE THAT THE SAME ACCURACIES IMPLIED BY THE PLOTTING SCALE ARE EQUALLY APPLICABLE TO DIGITAL DATA SUPPLIED FOR CAD.
- EVERY EFFORT IS MADE TO IDENTIFY ALL VISIBLE ABOVE GROUND FEATURES. HOWEVER, IT SHOULD BE BORNE IN MIND THAT THERE MAY BE ITEMS OBSCURED AT THE TIME OF SURVEY.
- VISIBLE FEATURES IN THE VICINITY OF THE BOUNDARIES, AS SHOWN ON THIS SURVEY, MAY NOT REPRESENT THE EXTENT OF LEGALLY CONVEYED OWNERSHIP.
- UNLESS OTHERWISE SPECIFIED FEATURES SHOWN USING LINE STYLES OR HATCHING ARE INDICATIVE ONLY, SUCH AS ROAD MARKINGS, HEDGE CENTRELINES, BRICK HATCHING AND GLAZING DETAIL.

UNLESS OTHERWISE STATED THE SURVEY STATIONS LISTED ABOVE ARE ONLY INTENDED TO BE USED FOR TOPOGRAPHICAL SURVEYS AT THE STATED SCALE.

DUE CONSIDERATION SHOULD BE GIVEN TO LONG-TERM STABILITY OF SURVEY STATION MARKERS.

GENERAL

- NO ALLOWANCE HAS BEEN MADE FOR SUB SURFACE ENTRY INTO MANHOLES OR OTHER CHAMBERS OR VOIDS BELOW GROUND LEVEL. THEREFORE ANY DETAILS RELATING TO DEPTHS, SIZES ETC. ARE TAKEN FROM ABOVE GROUND AND AS SUCH WILL BE APPROXIMATE ONLY.
- THE CONTRACTOR IS TO CHECK AND VERIFY ALL CRITICAL DIMENSIONS AND LEVELS BEFORE WORK STARTS.
- BURIED SERVICES SHOWN ON THIS DRAWING MAY BE ASSUMED ROUTES AND WILL NORMALLY BE OF UNKNOWN CONDITION. CONTRACTORS SHOULD UNDERTAKE SUITABLE VALIDATION WORK AND TAKE PARTICULAR CARE DURING EXCAVATION WORK. SAFE DIGGING PRACTICES SHOULD BE FOLLOWED.
- SHOULD THERE BE ANY CONFLICT BETWEEN THE DETAILS INDICATED ON THIS DRAWING AND THOSE INDICATED ON OTHER DRAWINGS, THEN TOWER SURVEYS ASSOCIATES SHOULD BE INFORMED PRIOR TO CONSTRUCTION ON SITE.
- IT IS IMPORTANT TO NOTE THAT THE SAME ACCURACIES IMPLIED BY THE PLOTTING SCALE ARE EQUALLY APPLICABLE TO DIGITAL DATA SUPPLIED FOR CAD.
- EVERY EFFORT IS MADE TO IDENTIFY ALL VISIBLE ABOVE GROUND FEATURES. HOWEVER, IT SHOULD BE BORNE IN MIND THAT THERE MAY BE ITEMS OBSCURED AT THE TIME OF SURVEY.
- VISIBLE FEATURES IN THE VICINITY OF THE BOUNDARIES, AS SHOWN ON THIS SURVEY, MAY NOT REPRESENT THE EXTENT OF LEGALLY CONVEYED OWNERSHIP.
- UNLESS OTHERWISE SPECIFIED FEATURES SHOWN USING LINE STYLES OR HATCHING ARE INDICATIVE ONLY, SUCH AS ROAD MARKINGS, HEDGE CENTRELINES, BRICK HATCHING AND GLAZING DETAIL.

401150N

NOTES

1. SURVEY CONTROL:

A) SURVEY GRID (HORIZONTAL):

THIS SURVEY IS ORIENTATED TO ORDNANCE SURVEY GRID NORTH. THE SURVEY IS TO A PLANE GRID. HORIZONTAL MEASUREMENTS TAKEN FROM THIS SURVEY WILL BE GROUND DISTANCE.

FULL ORDNANCE SURVEY CO-ORDINATES CAN BE CALCULATED BY SCALING THE SURVEY ABOUT THE SURVEY STATION NAMED TSA09, WITH CO-ORDINATES E 370932.073 N 401157.270 AS FOLLOWS:

SHIFT: NOT REQUIRED
SCALE: LSF = 0.99961
ROTATION: NOT REQUIRED

THE LOCAL SCALE FACTOR (LSF) APPLICABLE TO THIS SITE IS 0.99961, CALCULATED USING STANDARD TABULATED DATA.

THE CONTROL HAS BEEN ESTABLISHED BY TYING INTO THE ACTIVE ORDNANCE SURVEY CONTROL NETWORK. SEE NOTE C. BELOW.

(FOR THIS RELATIVELY LOW LEVEL SITE, MEAN SEA LEVEL CORRECTIONS (MSL) ARE DEEMED TO BE INSIGNIFICANT AND HAVE THEREFORE NOT BEEN APPLIED.)

B) VERTICAL DATUM:

ALTITUDES FOR THE CONTROL HAVE BEEN CALCULATED FROM GNSS DERIVED HEIGHTS AND CONVERTED TO ORTHOMETRIC HEIGHTS (ORDNANCE DATUM NEWLYN - ODN) NEW OS NET USING OSGM15 TRANSFORMATION PARAMETERS.

C) GNSS CONTROL:

THE CO-ORDINATE SYSTEM USED FOR THE PRIMARY CONTROL IS OSGB36. THIS HAS BEEN CALCULATED FROM ETRS89 NEW OS NET USING OSTN15 TRANSFORMATION PARAMETERS.

METHOD: FOR THIS PARTICULAR PROJECT, 'THE TOPCON NET' NETWORK RTK SYSTEM HAS BEEN USED. OBSERVATIONS HAVE BEEN TAKEN ON THE FOLLOWING DATE (S): 17.03.2022

MANUFACTURERS QUOTED ACCURACY IS RMSE 10 – 20 mm IN PLAN AND 20 – 30 mm IN HEIGHT. HOWEVER, RESULTS MAY VARY DURING THE DAY AND CERTAIN CONDITIONS COULD CAUSE DEGRADATION TO THE FINAL SOLUTIONS. FOR SALIENT CONTROL AND WHEREVER POSSIBLE AND PRACTICAL, TOWER SURVEYS ASSOCIATES HAVE USED AN OPEN SKY WITH GOOD SATELLITE GEOMETRY SO AS TO MAINTAIN THE HIGHEST ACCURACY POSSIBLE.

2. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELEVANT DRAWINGS/DOCUMENTATION.
3. CHECK SCALE BAR AND GRID BEFORE TAKING NON-FIGURED DIMENSIONS FROM THIS DRAWING.
4. IF IN DOUBT ASK.

UNLESS OTHERWISE STATED THE SURVEY STATIONS LISTED ABOVE ARE ONLY INTENDED TO BE USED FOR TOPOGRAPHICAL SURVEYS AT THE STATED SCALE.

DUE CONSIDERATION SHOULD BE GIVEN TO LONG-TERM STABILITY OF SURVEY STATION MARKERS.

GENERAL

- NO ALLOWANCE HAS BEEN MADE FOR SUB SURFACE ENTRY INTO MANHOLES OR OTHER CHAMBERS OR VOIDS BELOW GROUND LEVEL. THEREFORE ANY DETAILS RELATING TO DEPTHS, SIZES ETC. ARE TAKEN FROM ABOVE GROUND AND AS SUCH WILL BE APPROXIMATE ONLY.
- THE CONTRACTOR IS TO CHECK AND VERIFY ALL CRITICAL DIMENSIONS AND LEVELS BEFORE WORK STARTS.
- BURIED SERVICES SHOWN ON THIS DRAWING MAY BE ASSUMED ROUTES AND WILL NORMALLY BE OF UNKNOWN CONDITION. CONTRACTORS SHOULD UNDERTAKE SUITABLE VALIDATION WORK AND TAKE PARTICULAR CARE DURING EXCAVATION WORK. SAFE DIGGING PRACTICES SHOULD BE FOLLOWED.
- SHOULD THERE BE ANY CONFLICT BETWEEN THE DETAILS INDICATED ON THIS DRAWING AND THOSE INDICATED ON OTHER DRAWINGS, THEN TOWER SURVEYS ASSOCIATES SHOULD BE INFORMED PRIOR TO CONSTRUCTION ON SITE.
- IT IS IMPORTANT TO NOTE THAT THE SAME ACCURACIES IMPLIED BY THE PLOTTING SCALE ARE EQUALLY APPLICABLE TO DIGITAL DATA SUPPLIED FOR CAD.
- EVERY EFFORT IS MADE TO IDENTIFY ALL VISIBLE ABOVE GROUND FEATURES. HOWEVER, IT SHOULD BE BORNE IN MIND THAT THERE MAY BE ITEMS OBSCURED AT THE TIME OF SURVEY.
- VISIBLE FEATURES IN THE VICINITY OF THE BOUNDARIES, AS SHOWN ON THIS SURVEY, MAY NOT REPRESENT THE EXTENT OF LEGALLY CONVEYED OWNERSHIP.
- UNLESS OTHERWISE SPECIFIED FEATURES SHOWN USING LINE STYLES OR HATCHING ARE INDICATIVE ONLY, SUCH AS ROAD MARKINGS, HEDGE CENTRELINES, BRICK HATCHING AND GLAZING DETAIL.

401200N

NOTES

1. SURVEY CONTROL:

A) SURVEY GRID (HORIZONTAL):

THIS SURVEY IS ORIENTATED TO ORDNANCE SURVEY GRID NORTH. THE SURVEY IS TO A PLANE GRID. HORIZONTAL MEASUREMENTS TAKEN FROM THIS SURVEY WILL BE GROUND DISTANCE.

FULL ORDNANCE SURVEY CO-ORDINATES CAN BE CALCULATED BY SCALING THE SURVEY ABOUT THE SURVEY STATION NAMED TSA09, WITH CO-ORDINATES E 370932.073 N 401167.270 AS FOLLOWS:

SHIFT: NOT REQUIRED
SCALE: LSF = 0.99961
ROTATION: NOT REQUIRED

THE LOCAL SCALE FACTOR (LSF) APPLICABLE TO THIS SITE IS 0.99961, CALCULATED USING STANDARD TABULATED DATA.

THE CONTROL HAS BEEN ESTABLISHED BY TYING INTO THE ACTIVE ORDNANCE SURVEY CONTROL NETWORK. SEE NOTE C. BELOW.

(FOR THIS RELATIVELY LOW LEVEL SITE, MEAN SEA LEVEL CORRECTIONS (MSL) ARE DEEMED TO BE INSIGNIFICANT AND HAVE THEREFORE NOT BEEN APPLIED.)

B) VERTICAL DATUM

ALTITUDES FOR THE CONTROL HAVE BEEN CALCULATED FROM GNSS DERIVED HEIGHTS AND CONVERTED TO ORTHOMETRIC HEIGHTS (ORDNANCE DATUM NEWLYN - ODN) NEW OS NET USING OSGM15 TRANSFORMATION PARAMETERS.

C) GNSS CONTROL:

THE CO-ORDINATE SYSTEM USED FOR THE PRIMARY CONTROL IS OSGB36, THIS HAS BEEN CALCULATED FROM ETRS89 NEW OS NET USING OSTN15 TRANSFORMATION PARAMETERS.

METHOD: FOR THIS PARTICULAR PROJECT, 'THE "TOP-NET" NETWORK RTK SYSTEM HAS BEEN USED. OBSERVATIONS HAVE BEEN TAKEN ON THE FOLLOWING DATE(S): 17.03.2022

MANUFACTURERS QUOTED ACCURACY IS RMSE 10 – 20 mm IN PLAN AND 20 – 30 mm IN HEIGHT. HOWEVER, RESULTS MAY VARY DURING THE DAY AND CERTAIN CONDITIONS COULD CAUSE DEGRADATION TO THE FINAL SOLUTIONS. FOR SALIENT CONTROL AND WHEREVER POSSIBLE AND PRACTICAL, TOWER SURVEYS ASSOCIATES HAVE USED AN OPEN SKY WITH GOOD SATELLITE GEOMETRY SO AS TO MAINTAIN THE HIGHEST ACCURACY POSSIBLE.

2. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELEVANT DRAWINGS/DOCUMENTATION.
3. CHECK SCALE BAR AND GRID BEFORE TAKING NON-FIGURED DIMENSIONS FROM THIS DRAWING.
4. IF IN DOUBT ASK.

NOTES

1. SURVEY CONTROL:

   A) SURVEY GRID (HORIZONTAL):

   THIS SURVEY IS ORIENTATED TO ORDNANCE SURVEY GRID NORTH. THE SURVEY IS TO A PLANE GRID, HORIZONTAL MEASUREMENTS TAKEN FROM THIS SURVEY WILL BE GROUND DISTANCE.

   FULL ORDNANCE SURVEY CO-ORDINATES CAN BE CALCULATED BY SCALING THE SURVEY ABOUT THE SURVEY STATION NAMED TSA08, WITH CO-ORDINATES E 370932.073 N 401151.270 AS FOLLOWS:

   SHIFT: NOT REQUIRED
   SCALE: LSF = 0.99961
   ROTATION: NOT REQUIRED

   THE LOCAL SCALE FACTOR (LSF) APPLICABLE TO THIS SITE IS 0.99961, CALCULATED USING STANDARD TABULATED DATA.

   THE CONTROL HAS BEEN ESTABLISHED BY TYING INTO THE ACTIVE ORDNANCE SURVEY CONTROL NETWORK. SEE NOTE C. BELOW.

   (FOR THIS RELATIVELY LOW LEVEL SITE, MEAN SEA LEVEL CORRECTIONS (MSL) ARE DEEMED TO BE INSIGNIFICANT AND HAVE THEREFORE NOT BEEN APPLIED.)

   B) VERTICAL DATUM:

   ALTITUDES FOR THE CONTROL HAVE BEEN CALCULATED FROM GNSS DERIVED HEIGHTS AND CONVERTED TO ORTHOMETRIC HEIGHTS (ORDNANCE DATUM NEWLYN - ODN) NEW OS NET USING OSGM15 TRANSFORMATION PARAMETERS.

   C) GNSS CONTROL:

   THE CO-ORDINATE SYSTEM USED FOR THE PRIMARY CONTROL IS OSGB36, THIS HAS BEEN CALCULATED FROM ETRS89 NEW OS NET USING OSTN15 TRANSFORMATION PARAMETERS.

   METHOD: FOR THIS PARTICULAR PROJECT, THE "TOP-NET" NETWORK RTK SYSTEM HAS BEEN USED. OBSERVATIONS HAVE BEEN TAKEN ON THE FOLLOWING DATE (S): 17.03.2022

   MANUFACTURERS QUOTED ACCURACY IS RMSE 10 – 20 mm IN PLAN AND 20 – 30 mm IN HEIGHT. HOWEVER, RESULTS MAY VARY DURING THE DAY AND CERTAIN CONDITIONS COULD CAUSE DEGRADATION TO THE FINAL SOLUTIONS. FOR SALIENT CONTROL AND WHEREVER POSSIBLE AND PRACTICAL, TOWER SURVEYS ASSOCIATES HAVE USED AN OPEN SKY WITH GOOD SATELLITE GEOMETRY SO AS TO MAINTAIN THE HIGHEST ACCURACY POSSIBLE.

2. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELEVANT DRAWINGS/DOCUMENTATION.
3. CHECK SCALE BAR AND GRID BEFORE TAKING NON-FIGURED DIMENSIONS FROM THIS DRAWING.
4. IF IN DOUBT ASK.

UNLESS OTHERWISE STATED THE SURVEY STATIONS LISTED ABOVE ARE ONLY INTENDED TO BE USED FOR TOPOGRAPHICAL SURVEYS AT THE STATED SCALE.

DUE CONSIDERATION SHOULD BE GIVEN TO LONG-TERM STABILITY OF SURVEY STATION MARKERS.

GENERAL

- NO ALLOWANCE HAS BEEN MADE FOR SUB SURFACE ENTRY INTO MANHOLES OR OTHER CHAMBERS OR VOIDS BELOW GROUND LEVEL. THEREFORE ANY DETAILS RELATING TO DEPTHS, SIZES ETC. ARE TAKEN FROM ABOVE GROUND AND AS SUCH WILL BE APPROXIMATE ONLY.
- THE CONTRACTOR IS TO CHECK AND VERIFY ALL CRITICAL DIMENSIONS AND LEVELS BEFORE WORK STARTS.
- BURIED SERVICES SHOWN ON THIS DRAWING MAY BE ASSUMED ROUTES AND WILL NORMALLY BE OF UNKNOWN CONDITION. CONTRACTORS SHOULD UNDERTAKE SUITABLE VALIDATION WORK AND TAKE PARTICULAR CARE DURING EXCAVATION WORK. SAFE DIGGING PRACTICES SHOULD BE FOLLOWED.
- SHOULD THERE BE ANY CONFLICT BETWEEN THE DETAILS INDICATED ON THIS DRAWING AND THOSE INDICATED ON OTHER DRAWINGS, THEN TOWER SURVEYS ASS SHOULD BE INFORMED PRIOR TO CONSTRUCTION ON SITE.
- IT IS IMPORTANT TO NOTE THAT THE SAME ACCURACIES IMPLIED BY THE PLOTTING SCALE ARE EQUALLY APPLICABLE TO DIGITAL DATA SUPPLIED FOR CAD.
- EVERY EFFORT IS MADE TO IDENTIFY ALL VISIBLE ABOVE GROUND FEATURES. HOWEVER, IT SHOULD BE BORNE IN MIND THAT THERE MAY BE ITEMS OBSCURED AT THE TIME OF SURVEY.
- VISIBLE FEATURES IN THE VICINITY OF THE BOUNDARIES, AS SHOWN ON THIS SURVEY, MAY NOT REPRESENT THE EXTENT OF LEGALLY CONVEYED OWNERSHIP.
- UNLESS OTHERWISE SPECIFIED FEATURES SHOWN USING LINE STYLES OR HATCHING ARE INDICATIVE ONLY, SUCH AS ROAD MARKINGS, HEDGE CENTRELINES, BRICK HATCHING AND GLAZING DETAIL.

Appendix C – Outline Hydraulic Calculations

Executive Summary

The proposal is for the construction of a combined residential and commercial development with associated highways and landscaped areas on 'Greenfield' Land at Chaddock Lane, Astley, Wigan. The site is split into two specific areas which are generally bounded by open land to the north, residential development to the east and commercial units to the south and west.

This report has considered the flood risk posed to the proposed site from a variety of flood risk sources, as defined by the National Planning Policy Framework (NPPF) and the local Strategic Flood Risk Assessment (SFRA). The development lies outside of any fluvial flood risk areas, holding a Flood Zone 1 (low risk) classification. Therefore it passes the requirement of the sequential and exception tests.

The assessment has also found the site to be at low risk from surface water, sewer, groundwater flooding and artificial sources.

There is no residual flood risk from the development site to the surrounding district due to the mimicking in pre development Greenfield runoff rates to a watercourse to the north and culverted watercourse to the south. The development does not therefore increase the risk of flooding to other adjacent neighbourhoods. Out of chamber or gully flooding for the extreme 100 year plus climate change event may occur and is classed as exceedance flows. Any exceedance flood water will be contained within the development site and directed away from the buildings to the external hard paved and soft landscaped areas.

Drainage Strategy

The surface water collected from the residential and commercial units, external hard paved areas and highways will be directed to new adopted surface water drainage networks or open swales, which in turn outfall to large attenuation ponds. All this will be in line with the current Sustainable Drainage Systems (SUDS) and sewerage providers best practice guidance. Flows will then be restricted in line with the pre development Greenfield runoff rates. Other forms of SUDs are to be considered in the form of water butts and rainwater harvesting but are not essential to satisfy this strategy.

Appropriately sized petrol separators will be included on the outlet from external areas to prevent pollution risk.

Foul water generated by the development will be discharged by gravity to a new adopted drainage network connecting ultimately to the public sewer to either the north or south of the development site.

1.0 Introduction

Thomasons has been appointed by Peel Investments (North) Limited to prepare this Flood Risk Assessment (FRA) and Drainage Strategy Report to support a planning application for a Commercial and Residential Development at a site known as Chaddock Lane, Astley, Wigan. The assessment has been undertaken in line with the new National Planning Policy Framework (NPPF) Flood Risk Guidance Document 2012.

This Report has been commissioned by Peel Investments (North) Limited and is specific to their interests in the Commercial and Residential development as described by the Parameters Plan and Illustrative Masterplan in Appendix A. This report may not be assigned.

The report has been commissioned to identify likely flooding issues associated with the proposed development, any likely constraints that could be imposed and to advise on the technical feasibility of proving drainage for the development proposals. Post planning and as the detailed design progresses, the information and details within this report may have to be refined, modified and updated to suit requirements and obligations of the Local Planning Authority, Environment Agency, United Utilities and other statutory authorities. The Flood Risk Assessment and Drainage Strategy Report will include the following scope of works:

- Identify available data relating to flood risk at the site.
- Determine whether the site is at risk from flooding, including from breach or overtopping of any existing flood defences, surface water flooding and/or ground water flooding.
- Identify available data relating to drainage at the existing site, including historical discharges.
- Discuss Sustainable Drainage Systems (SUDS) as an option for reducing surface water flood risk.
- Determine any potential increase in surface water runoff as a result of the proposed development.
- Devise an appropriate outline foul and surface water drainage strategy to deal with any increase in surface water runoff and include for climate change. This will also include outline hydraulic calculations where appropriate.
- Consider the recommendations of the Level 1 and Level 2 Wigan MBC Strategic Flood Risk Assessments (SFRA).
- Prepare the Flood Risk Assessment and Foul & Surface Water Drainage Strategy report.
- Assess mitigation measures & off site impacts and define any residual risks.

2.0 Development Description and Location

2.1 Existing Site Description

The Proposed Commercial and residential development at the Chaddock Lane site (Red Line boundary) is situated within land between Chaddock Lane to the south and Garrett Lane to the north. The site is made up of existing land used for rough grazing with occasional hedgerows, ditches, trees. The total 'Red Line' area is 18.65 Hectares.

The Chaddock Lane site is situated some 500m to the east of Astley Village and some 12km south east of Wigan Town Centre. Chaddock Lane runs generally along the length of the southern boundary. The remaining boundaries are taken up with existing residential properties to the east, commercial developments to the west and Garrett Lane leading onto further arable land to the north. A small ditch network passes through the site in a south westerly direction before outfalling into a culvert.

A previous planning approval was granted for the development site and the first phase that included a Public House & Restaurant, new highway junction and central spine road (with associated drainage infrastructure) were constructed some 4-5 years ago. The spine road has been temporarily blocked up after the entrance to the Public House & Restaurant.

The site has been topographically surveyed and indicates a fall from circa 47m AOD at the north eastern section to 38m AOD in the north west and 34m AOD in the south west corners.

The site can be located at approximate National Grid Reference 370842,401023.

Figure 1 below identifies the overall site location details. Further details of the layout can be seen on the Red Line Plans in Appendix A.

Figure 1: Site Location

2.2 Development Proposals

The proposed development encompasses a proposed mixed-use development comprising up to 28,000 sqm of employment floor space (B1/B2/B8) and up to 165 dwellings, a community building, open space, accesses, landscaping and associated infrastructure. Access to the development site will be split into three sections with the commercial element accessed from Chaddock Lane to the south via the existing junction and spine road. The two housing areas to the north east and north west will have direct access from existing highways at northern section of the site.

The generally accepted design life for a development such as that proposed at Chaddock Lane for the assessment of flood risk is 100 years for the residential element and 30 years for the commercial element.

3.0 Planning Policy and Consultation

3.1 Planning Policy Requirement

The flood maps provided by the Environment Agency locate the site within Flood Zone 1, i.e. land as having an annual probability of fluvial flooding less than 1 in 1000 (<0.1%) in any year. As a requirement of the new National Planning Policy Framework, the proposed development has to satisfy the requirements of the Sequential Test and where applicable the Exception Test.

Sequential Test:

Under the NPPF, Flood Zone 1 is defined as low probability flood risk. The proposed development is for residential properties, commercial units and a community building, the former of which in line with Table 2 is classified as the worst case 'More Vulnerable'.

Placing both these criteria into Table 3 (Flood Risk Vulnerability and Flood Zone 'Compatibility'), More Vulnerable development in Flood Zone 1 determines that 'Development is 'Appropriate'. In light of this the Exception test is not required.

3.2 Strategic Flood Risk Assessment (SFRA)

SFRA's assess the risk associated with all types of flooding and provide the information required to identify the amount of development permitted in an area; how drainage systems in the area should function and also how risks in vulnerable areas can be reduced and/or mitigated. The NPPF states that regional planning bodies (RPB's) or local planning authorities should prepare SFRA's in consultation with the Environment Agency.

Wigan Borough Council produced in 2011 the Level 1 & 2 Strategic Flood Risk Assessment (SFRA) for the area in accordance with PPS 25 criteria (Planning Policy Statement 25: Development and Flood Risk). The purpose of the SFRA is to assess and map all known sources of flood risk including fluvial, surface water, sewer, groundwater and all impounded water bodies, taking into account future climate change predictions.

A summary of the main elements from the SFRA associated with the development sites are detailed below. The full report can be obtained from the Wigan MBC website (www.wigan.gov.uk). No specific flood risk drawings were prepared with the SFRA. It is not known at this time when the Level 2 SFRA will be completed.

- SFRA provides a detailed understanding of flood risks across all areas.
- SFRA maps indicate the site to be at risk of fluvial flooding.
- The Maps indicate the site to be at Low to moderate risk of groundwater flooding.

- There are no historic incidences of flooding within the site.
- There are no historic tidal or fluvial flooding, sewer flooding or canal flooding incidences at the site.

3.3 Statutory Authority Correspondence

3.3.1 At this time no correspondence has been received from either the Environment Agency or UU.

4.0 Definition of Flood Hazard

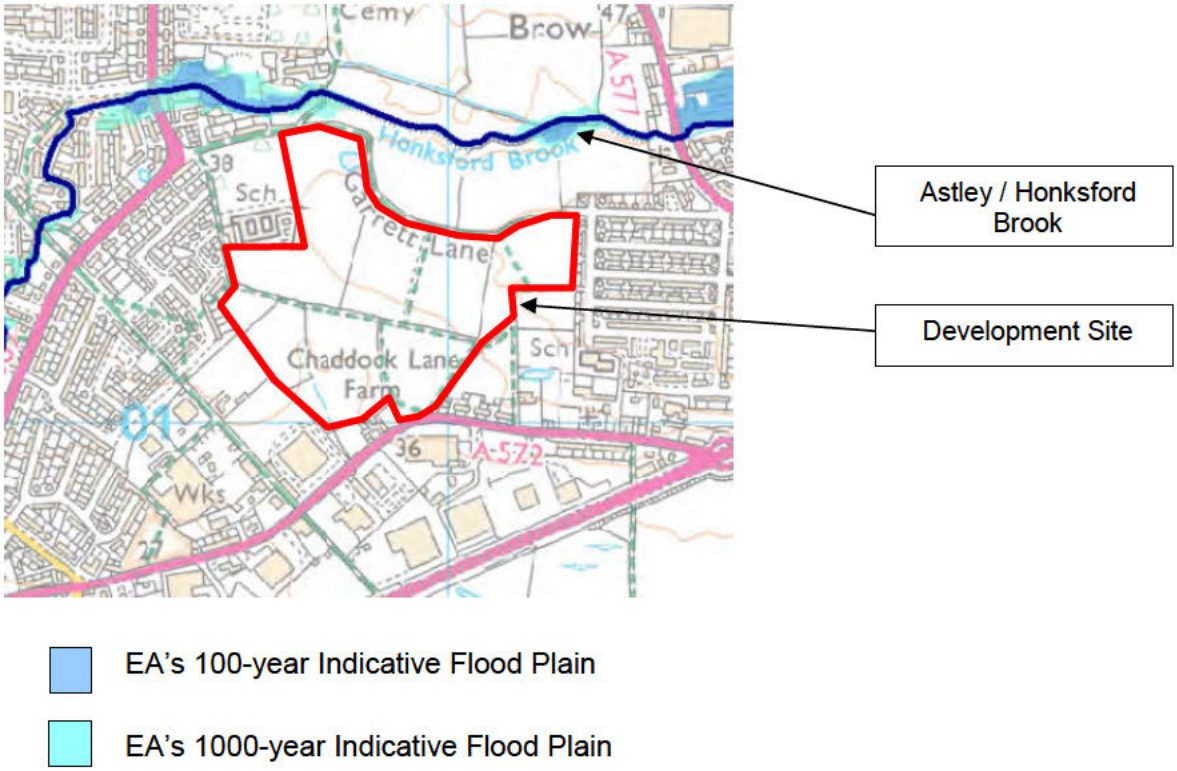
4.1 Sources of information

The NPPF requires the developer to consider the impact of runoff generated by the proposed development onto the downstream catchment, and to assess the risk of runoff from the surrounding district impacting on the developments footprint. Further, the report is to consider flood risk from all other sources. This section defines the flood risk receptors and anticipated flood risk. Section 5 then discusses in further the probability of flooding from defined sources and the likely impacts.

4.2 Flooding from Sea (Tidal)

The development site is outside the risk of tidal flooding due to its inland location and high ground levels.

4.3 Flooding from Rivers and Watercourses (Fluvial)



From carrying out the site visit and reviewing the topographical survey, it is evident that a small ditch passes through the site from the north east corner down to the south west corner. There are no inflows to this ditch and so it is collecting overland runoff from the fields only. The ditch outfalls into a culvert in Chaddock Lane.

Beyond the north of the site, Honksford (Astley) Brook passes through the centre of the adjoining land flowing in a westerly direction. Along its length there are a number of weirs indicating that it falls quite significantly. Honksford (Astley) brook is classed by the EA as Main River and therefore has access rights to maintain its free flow.

Environment Agency Flood Zones

Figure 2 below locates the site on the Environment Agency's indicative flood plain map. It is clear from this that the red line boundary lies outside the current statistical fluvial floodwater model footprint of any watercourse, thus holding a Flood Zone 1 (low risk) Classification' in accordance with the NPPF Guidance. I.e. the site has probability of annual fluvial flooding of less than 1 in 1000 (<0.1%) in any one year. The risk from fluvial flood water is therefore diminished to acceptable levels.

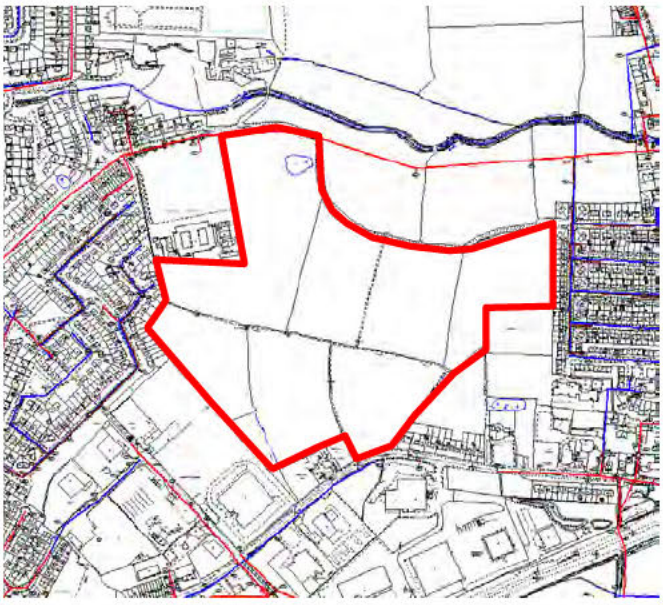


Figure 2 – The Environment Agency's Indicative 100-year Flood Plain Map

4.4 Sewers and Private Drainage

The United Utilities (UU) sewer records have been reviewed as part of this assessment and can be identified in Figure 3 below. There is a 375mm diameter combined water sewer passing east to west through the very northern portion of the site in parallel with Honksford (Astley) Brook and outfalling beyond the north west corner. There are no other public sewers within the site.

Figure 3 – United Utilities Sewer Records

Beyond the site boundary there are foul and surface water sewers serving the adjacent residential areas to the east and west. To the south, a surface water drain runs west within Chaddock Lane.

Beyond the public sewers, it is evident from the site visit that a new access road into the site has been constructed within the last five years to service the full development, with short accesses spurring off to the east and west. Runoff from the highway discharges into adjacent new ditches and ponds with flow restrictors to the existing ditch. A small attenuation pond was also located in the south west corner adjacent a new Public House.

Due to the low lying nature of the existing 375mm public sewer passing through the site in relation to the proposed residential development it is not considered to be a flood risk generator.

4.5 Groundwater

Thomasons are not aware of any intrusive site investigations being carried out at the site. A review of local boreholes would indicate clay over possible sand and gravels. Further investigations will be necessary to confirm this. Although the ground was extremely wet under foot, this is considered to be due to the clay layer at the surface preventing any infiltration.

4.6 Surface Flooding (Overland Flow)

The general fall to the majority of the area is towards the south west. Along the higher ground of the northern boundary the ground falls either into the site or to the north away from the site. As such there is little risk of overland flows into the site.

The Strategic Flood Risk Assessment (SFRA) does not identify the site as being at risk from surface water flooding nor is there any record of any historical flooding.

4.7 Artificial Sources

No other artificial sources such as canals, reservoirs or other waterbodies have been identified in the vicinity of the site to pose a flood risk.

5.0 Assessment of Flood Risk on Development Site (Probability)

5.1 Summary

Section 4 has defined the anticipated flood risks from all sources. Table 1 below considers each of the sources and defines in tabular format the probability of flood risk associated to each and the likely impacts.

Table 1 – Flood Risk Summary

Source	Flood Risk	Impacts	Remarks
Tidal	Low	Low	Development site is not in close proximity for it to be tidally influenced
River & Watercourse	Low	Low	Development site is located in Flood Zone 1 therefore at low risk from flooding
Sewers and On Site Drainage	Low	Low	One public sewer passing through the northern portion of the site. Existing infrastructure already in place to serve the main southern part of the site.
Groundwater	Low	Low	No indication that groundwater will be a flood risk to the site.
Surface (Overland Flood Flow)	Low	Low	Northern boundary at a high point so no risk of overland flow into site. On site drainage design with flood flow routes to be incorporated.
Artificial Sources	Low	Low	No artificial sources in close proximity to the site.

6.0 Drainage Strategy

6.1 Overview

As part of this study, United Utilities (UU) as the sewage undertaker for the district, Wigan Council and the Environmental Agency (EA) has been consulted.

6.2 External Consultation

United Utilities

As discussed in Section 3, the UU sewer records have been reviewed and confirm that there are a limited number of adopted sewers within and surrounding the development site.

It is a requirement of UU that all developments be drained on a separate system with surface water discharging to a suitable outlet via SUDS. UU have confirmed that only foul water can discharge to the combined or new foul water sewer networks.

Environment Agency

The EA's standard guidance for low risk Flood Zone 1 site over 1ha is that runoff from the new development should mimic the pre development runoff characteristics.

6.3 Existing Runoff

6.3.1 The areas to be developed are all currently Greenfield and as such all discharges should mimic the pre development greenfield runoff rate for the area. Table 2 below defines these rates using the IH124 method of calculation from the WINDES software package.

Table 2: Existing Surface Water Runoff

Runoff Area	Area (ha)	Greenfield Runoff Rate (Qbar)
North West	1.90	11.50 l/s
South	11.65	70.90 l/s

The findings from this study have determined a peak existing surface water runoff from the whole development site of **82.40 l/s**.

6.4 Geology

No site specific site investigation has been provided to Thomasons. Information from local boreholes in the vicinity of the site would indicate clay over sands and gravels at depth. This would need to be confirmed via a more detailed investigation and at this time we would define for the purpose of this assessment that infiltration is not possible.

6.5 Sustainable Drainage Systems

SUDS Objectives:

Sustainable drainage developed in line with the ideals of sustainable development is collectively referred to as Sustainable Drainage Systems (SUDS). At a particular site, these systems are designed both to manage the environmental risks resulting from the urban runoff and to contribute wherever possible to environmental enhancement. SUDS objectives are therefore to minimise the impacts from the development on the quantity and quality of the runoff and maximise amenity and biodiversity opportunities (CIRIA C697, 2007).

SUDS's Design Themes

A strong design theme is essential if the maximum aesthetic benefits are to be gained from the SUDS approach. At a more local scale the SUDS should link with the individuals plot structure, planting, public open space requirements and amenity areas, gaining multiple benefits from a limited area of land.

The SUDS Management Train

The 'Management Train Approach' should be central to the surface water drainage strategy of the proposed site. The main objective is treatment and control of runoff as near to the source as possible protecting downstream habitats and further enhancing the amenity value of the site. This concept uses a hierarchy of drainage techniques to incrementally reduce pollution, flow rates and volumes of storm water discharge from the site, and is as follows:

1. **Prevention** – The use of good site design and housekeeping measures to prevent runoff and pollution and includes the use of rainwater reuse / harvesting.
2. **Source Controls** – Control of runoff at source or as close to source as possible (e.g. soakaways, green roofs, pervious pavements).
3. **Site Control** – Management of water in a local area and can include below ground storage / attenuation, swales, detention basins, large infiltration devices.
4. **Regional Control** – Management of water from a site or various sites and can include wetlands and balancing ponds.

The drainage techniques for this development will seek to include where possible Prevention, Source Control and Site Control measures. The site constraints at the Chaddock Lane site, in terms of the likely impermeable natural sub strata may unfortunately reduce the availability of most 'infiltration based' SUDS options.

SUDS Site Constraints

SUDS techniques are suitable for all sites; therefore an assessment of the existing site is required so that SUDS limitations can be determined.

i. Land Use Characteristics: The significant size and type of development plot enables a range of prevention, source control and site control SUDS devices to be considered both above and below ground.
ii. Site Characteristics: No site investigation is currently available. For this assessment it is assumed that infiltration is not possible.
iii. Catchment Characteristics: The site is classified as 'Greenfield'. Current guidance would limit the discharge rate from the post developed site to not exceed existing greenfield discharge rates.
iv. Environmental and Amenity Performance: The inclusion of SUDS within the overall development is a key driver in providing both amenity and habitat creation. The inclusion of swales and open ponds will help to create the benefits on a number of fronts.

SUDS Design Philosophy

The SUDS philosophy for the development site is the promotion of Prevention, Source Control and Site Control Techniques:

The following design philosophy is proposed:

- Surface water treatment using the 'Management Train' approach to remove and isolate contamination at all SUDS facilities prior to conveyance to the local watercourse.
- Surface water discharge into the watercourse passing through the site at a controlled rate.
- Prevention measures by the inclusion of water butts & potentially rainwater harvesting.
- Source Control by the use of swales adjacent the highways although infiltration is unlikely to be possible.
- Site Control features in the form of attenuation ponds strategically located around the site but predominantly at the north west and south west locations to accommodate the additional surface water runoff generated by the development site.
- Provision of suitable oil separators in line with Pollution Prevention Guidance 3 criteria.
- Aim to limit where possible the impermeable fraction of development.

SUDS Parameters

It is proposed that the development site has three levels of treatment. Prevention and source controls are considered as the first two level of treatment and the site control as the third level of treatment.

Prevention and Source Control – Principals and Objectives

The main objective of prevention and source control is treatment and control of runoff as near to source as possible. Application of these techniques will require reduction of impermeable areas and techniques to restrict the runoff rates.

Prevention and Source Controls measures to be considered where possible as part of the overall approach to the management train at this site includes rainwater harvesting, permeable/pervious pavements and improving the quality of the runoff by sending it through filter drains. Typical examples are given in the SUDS Manual (Ciria C697) and are briefly described below. It must be noted that the effectiveness of each system is dependent on the final design as well as the actual site conditions.

Water Butts;

Plastic or GRP tanks are placed at the base of rainwater down pipes to collect rainwater runoff from the roof areas. This water can then be used by the residents for watering both indoor and outdoor plants and soft landscaping.

Rainwater Harvesting;

Similar to the use of water butts this prevention method stores rainwater runoff from roofs and external areas in below ground tanks. The water can then be used for irrigation purposes to the soft landscaping areas or alternatively pumped to an internal storage tank where the 'Grey' water can be used for WC's and washing machines.

Permeable surface;

Block paved and or specialised tar macadam provides a porous surfacing for the external areas that allows water to infiltrate through and into the underlying layers. Water is temporarily stored and it either infiltrates to ground or is retained for controlled release into the drainage system.

Filter Drainage;

Consideration will be given to use filter drains for softscape / hard landscape interfaces. The solution will be used to drain the home zone 'capping beds' before discharge into the adopted drainage network.

Soakaways;

Rainwater from roofs and other hard standing areas is directed via the below ground drainage system to an underground chamber that allows the water to infiltrate to ground. Units can be located within each individual property or on a larger scale for a number of properties. The size of each unit is dependent on the inherent ground conditions at each location.

Site Control – Principals and Objectives

Site control features such as ponds and basins can be designed to attenuate storm runoff and provide conditions for settlement of suspended solids. The use of these types of attenuation devices within the development may have to be discounted due to space, Safety implications and as UU do not presently allow connection from these devices into the public sewer network due to ongoing issues with maintenance. Legislation is currently changing on the use of such devices, which may enable the use in the near future and reduce the current adoption constraints.

Below ground storage may lack amenity benefits but can be provided in the form of oversized pipes, geocellular storage crates, or concrete storage tanks. This type of attenuation is more likely to be adopted by UU and reduces the land take of ponds and basins as well as reducing the health and safety implications. Ultimately it will be with the developer to put forward appropriate solutions that best suit the development layout as well as the underlying ground condition constraints.

6.6 Outline Surface Water Drainage Strategy

Surface Water runoff rates have been determined for the existing development site (refer to section 6.3 for details). Discharge rates from the redevelopment to the watercourse to the north and culvert to the south will need to mimic these rates, to satisfy the requirements of the NPPF and the Environment Agency.

The general principal of the surface water drainage strategy is to collect the runoff from the new residential properties, commercial units & external areas, and depending on the ground conditions direct it to a below ground surface water drainage network and/or the swale network, which will ultimately connect to a new public sewer network beneath the highways. The networks would then discharge into a site control SUDs such as an open attenuation pond. These will enable infiltration to ground and/or a controlled discharge to the adjacent Astley Brook watercourse to the north or culverted watercourse to the south.

The proposed private drainage layout for the new development site will be designed in accordance with BS EN 752: 2008 and Building Regulations part H guidance and the adopted drainage in line with Sewers for Adoption (current edition). In both cases this is to provide no flooding up to the 30 year storm return period criterion.

Flooding can occur on a local scale beyond the 30yr criterion due to runoff exceeding the capacity of the minor system during extreme events and it can only be addressed on a site specific basis. Sewers for Adoption (SfA) 7th Edition (WRc, 2012) states that properties should be protected against flooding from extreme events (1 in 30 year) and that flood pathways are identified when the drainage system is exceeded.

In the case of this development, exceedance flows will be all those over and above the 30 year design criterion set by Building Regulations and SfA guidance. Using storage within the external hard standing and soft landscaping areas would be achievable and would direct flood water away from the new properties with flows directed back into the surface water drainage network as the water levels in the sewers recede. Exceedance flooding of the public sewers could occur. During the detailed design of the development layout, consideration of these sewers to coordinate with the highway networks will be made to retain any flood water within the highway or at a minimum direct away from the properties to the lower lying land.

Although it is envisaged that Prevention and Source Controls measures could be included in the final scheme, this strategy will assume for outline calculations purposes that only Site Control methods are incorporated. Taking into account the existing peak discharge rate of 82.40l/s, and assuming no prevention & source control measures are incorporated and no infiltration to ground is possible then the worse case attenuation volumes are defined in Table 3 below. Although attenuation volumes have been indicated for the 100 year + climate change event, these volumes could be retained on the highway surface as long as there is no flood risk to properties and a safe access and egress is assured. It is noted that these rates and volumes are preliminary for this outline assessment and are likely to alter at detailed design stage when more site specific information is made available. Further details on the calculations can be found in Appendix C.

Table 3: Outline Maximum Attenuation Volumes for the 30 yr & 100 yr + Climate Change Storm Events

Area	Existing Greenfield Discharge Rate	Total Site Area	Total Impermeable Area (assuming say 55% for Residential and 80% for Commercial)	Approximate Attenuation Volume for 30yr Event	Approximate Attenuation Volume for 100yr + CC Event (Extra Over 30 yr event can be retained in low lying external areas)
North West Side	11.50l/s	1.90ha	1.045ha	266m^3	523m^3
South Side	70.90/s	11.65ha	8.38ha	2314m^3	4432m^3

Drawing 7305-FRA-002 in Appendix B indicates the outline drainage strategy based on the Architects master plan intent with drainage networks and attenuations ponds identified.

Any future drainage calculations carried out as part of a site wide drainage strategy or for the development layouts themselves must include the appropriate increase in rainfall to satisfy the future Climate change allowances.

6.7 Pollution Control

Silt is to be prevented from entering the drainage system by the use of trapped gullies, channels with silt traps, french drains with silt traps or by the use of Sustainable Drainage techniques. If appropriate, oil separators in line with Pollution Prevention Guidance criteria will be provided.

6.8 Foul Water Strategy

The outline foul water drainage strategy is to construct a new private and adopted (where applicable) foul water drainage network to serve the residential and commercial units with connection to the existing combined sewer to the north west corner and the new foul drainage infrastructure to the southern element of the site that has already been constructed as part of the initial phase. Where possible existing public sewers will be retained in their current position.

An application will be made in due course to UU to connect the foul flows to the public sewer.

7.0 Management Measures, Off Site Impacts and Residual Risk

7.1 Flood Risk Management Measures

The surface water drainage strategy for the new development site indicates the peak flows rates will mimic the pre-development Greenfield runoff scenario. The new private and public surface water networks will be designed in line with current British Standard guidance up to the 100 year storm return period including an allowance for climate change. Beyond the 30 year criterion, out of chamber flooding may occur with flood water directed away from the properties and units along the highways to the low lying areas.

The proposed use of SUDS such as prevention measures (water butts & rainwater harvesting), Source Controls measures (soakways & impermeable paving) and site control measures (Attenuation ponds) will be considered and will help to reduce the runoff to the downstream catchment.

The respective site users will be responsible for site cleanliness, gully emptying and drain cleansing to ensure that the surface water drainage system will always operate at its maximum efficiency. UU will maintain all the existing and new adopted sewers networks within the site.

Should any flooding occur from the new sewers and drains it will be directed away from the new developments to the external highways, play areas and soft landscaping areas.

Flooding from sources is deemed low and thus no further consideration of the risk is required.

7.2 Off Site Impacts

The redevelopment of the site does not impair the hydraulic continuity of any watercourse and the current ‘‘local hydraulics’’ of distributing watercourses / outfalls.

The Development footprint does not cross or cover any existing or declared future catchment flood defences. Consequently, the Applicant does not propose to augment or compromise the current catchment defences.

Surface water runoff will mimic the pre development regime and utilises SUDS solutions to satisfy the site constraints.

By mimicking the pre development peak runoff at its point of discharge into the adjacent watercourse by the inclusion of SUDS, this will reduce surface water flooding impact downstream.

7.3 Residual Risk

With careful design of the drainage elements as described above there will be no residual flood-related risks that will remain after the development has been completed.

Flood risk to people and property can be managed but it can never be completely removed; a residual risk remains after flood management or mitigation measures have been put in place. The only known flood related risk that will remain will be the risk of out of manhole flooding on the private surface water drainage network within the site beyond the 30 year design criterion. Should exceedance occur, out of chamber flood water will be directed to the external hardstanding areas and roads but will not be a flood risk generator.

The owner will be responsible for all future maintenance of the onsite drainage infrastructure.

There will be no residual risks to any of the neighbouring properties by any uncontrolled flood flows escaping from the proposed redevelopment.

Dear Recipient,

Following on from my previous email, please find attached documents to accompany the submission of a planning application for Land at Astley Park Way under the application number A/23/96226/DCINV, following a letter of invalidation received today. Due to attachment size limits within outlook the documents will be sent, split across several emails.

This email contains the Desk Study and Preliminary Risk Assessment as four separate parts as the previous submissions were over 10mb.

Kind Regards,

DESK STUDY AND PRELIMINARY RISK ASSESSMENT
ASTLEY PARK WAY, WIGAN

1 INTRODUCTION

1.1 Engagement of Discovery CE

Discovery CE (DCE) was instructed by BE Design Limited (the Client), to carry out a desk study and preliminary risk assessment on a parcel of land located at Astley Park Way, Wigan as shown within Appendix A Figure 1 (the site). A plan for the site provided by the client is included within Appendix B.

The offer to carry out the work is contained in DCE proposal ref 21133J-QLO01 dated 12th November 2021 with the instruction to proceed contained in an e-mail from BE Design Limited dated 20th January 2022.

1.2 Development Proposal

It is understood that the proposed development includes an industrial estate, inclusive of 5 No. industrial warehouse units along with associated infrastructure including parking and loading areas and greenspace.

1.3 Objectives

The objective of work presented in this report was to collate sufficient data to identify potential geotechnical and environmental hazards, and to allow a preliminary contaminated land risk assessment to be carried out.

More specifically the objectives are:

1. To assess the historical activities at the site though inspection of historical ordinance survey data, data held by statutory authorities or other readily available published data;

2. To assess the current land use through a site walkover survey;

3. To identify potential geotechnical hazards at the site through inspection of geotechnical reports, maps and memoirs and if available previous investigative works;

4. To identify likely contaminants of concern (CoCs) which may be present in the soils or groundwater beneath the site;

5. To identify potential pathways and receptors in the context of the contaminated land regime;

6. To carry out a preliminary risk assessment; and

7. To provide conclusions and recommendations.

The purpose of a preliminary risk assessment is to identify whether or not the potential contaminant sources, pathways and receptors at the site may form viable pollutant linkages in the context of the contaminated land regime.

Recommendations have been based on the collation and review of available information on the condition of the land and will be cross referenced with statutory guidance such that decisions can be made on whether:

1. Ground instability is likely to be a risk;

2. There is a “possibility” that pollutant linkages exist on the land; and

3. There is sufficient information already available to enable the Local Authority to make a decision on whether the site is classified as contaminated land.

1.4 Study Scope of Work & Study Limitations

The current work comprised a walkover of the site and an assessment of relevant historical Ordnance Survey maps and readily available environmental records, all of which are published as part of a Groundsure report and presented in Appendix C and D respectively.

A qualitative assessment of the environmental risks associated with the site was undertaken in terms of a conceptual site model (CSM) in the form of a “Source, Pathway, Receptor” pollutant linkage approach. The preliminary risk assessment is shown in Appendix E.

This desk study covers the below ground risks associated with the ground conditions in the context of the readily available information and its current use, but does not address environmental risks associated with the fabric of the buildings on site.

Reasonable standards of professional judgement were used to assess the available information and to develop and evaluate the CSM.

It is possible that there were deficiencies in the data assessed meaning that the CSM is incomplete. Therefore, not all potential pollutant linkages may have been identified, or conversely the presence of non-existent potential pollutant linkages may have been concluded. As more and better data become available the conceptual site model should be updated and re-evaluated.

2 SOURCES OF INFORMATION

1. Groundsure Enviro & Geo Insight, Dated: 27th January 2022, Ref DCE-8475353 (presented in Appendix C).
2. Groundsure Map Insight (Small and Large Scale Historical Maps), Dated: 27th January 2022, Ref DCE-8475351 (presented in Appendix D).
3. The Coal Authority, Consultants Coal Mining Report, 27th January 2022, Ref DCE-8475352 (presented in Appendix E).
4. Cheshire Surveys Limited, Topographic Survey, 5th September 2019, Drawing No. B0208/2926/1 - B0208/2926/8.
5. British Geological Survey Geoindex webpage (http://www.bgs.ac.uk/geoindex).
6. Zetica, UXO Risk Assessment, 27th January 2022;
7. Department for Communities and Local Government, June 2019, National Planning Policy Framework.
8. Department for environment, Food and Rural Affairs online mapping database (https://magic.defra.gov.uk).
9. National House Builders Council, 2008, R&D66 VOL 1 Guidance for the Safe Development of Housing on Land Affected by Contamination.
10. CIRIA C552, Contaminated Land Risk Assessment, a Guide to Good Practice.
11. Environment Agency, October 2020, Land Contamination Risk Management (LCRM), How to assess and manage the risks from land contamination.

The available data has been reviewed and where deemed appropriate, been included in the Desk Study Review (Section 5 of this report).

The following environmental information was provided in the Groundsure Report (Appendix C).

1. Environmental Permits, Incidents And Registers;
2. Landfill and Other Waste Sites;

3. Current land Uses;
4. Geology;
5. Hydrogeology and Hydrology;
6. Flooding;
7. Designated Environmentally Sensitive Sites;
8. Natural Hazards;
9. Ground Workings;
10. Mining, Extraction & Natural Cavities;
11. Natural Ground Subsidence;
12. Borehole Records;
13. Estimated Background Soil Chemistry; and
14. Ground Gas and Radon.

The Groundsure report also includes historical maps relating to the site at a range of scales (Appendix D).

It should be noted that this database is updated periodically and therefore it may not document recent developments or registrations in the site area or activities, which have not been declared.

3 THE SITE

3.1 Site Walkover and Description

The site is located approximately 8 km to the south of Bolton on a parcel of land located off Chadlock Lane, Tyldesley, Manchester and is centred at an approximate National Grid Reference (NGR) 370867,401177 (Appendix A1). The site occupies a parcel of land approximately 12.5 Hectares (ha), and is largely level at c. 35 m Above Ordinance Datum (AOD).

The site is divided into six portions primarily by hedgerows, and is used by the general public with footpaths and bridleways going through site as shown within Appendix B. The site is bordered by housing estates to the north, east and west (Plate 1), with the Swain Trucking Depot present along the south-western boundary . The southern boundary comprises of Chaddock Lane and Applewood Farm Dining and Carvery (Plate 2).

Plate 1: Typical view of north, east and west site boundary.

Plate 2: Southern site boundary

Primary access to the site is off of Astley Park Way on the southern boundary, at the time of the site visit however, Heras fencing and concrete barricades prevented vehicular access at this point (Plate 3). A secondary access point was also identified which was located to the north-eastern corner of site, off of Garrett Hall Road.

Plate 3: Primary access to site, southern boundary.

The northern and north-western section of site comprised large fields which were primarily used as a public open space, with gravel footpaths extending along the northern and eastern borders (Plate 4).

Plate 4: Northern section of site, facing north-east.

The south-western section of site was formed of hummocky shrubland with dense vegetation in parts and a large pond in the south-western corner. Ground conditions were noted during the site visit to be to be wet. A pile of tyres were noted along the southern boundary of the south-western section (Plate 5).

Plate 5: Pile of tyres noted along the southern boundary of the south-western section.

A disused tarmac covered road forming a junction along with associated streetlights, an old disused electrical box and associated drainage was noted across the central portion of the site extending from Chaddock Lane to the south (Plate 6). Fly tipped waste thought to be construction waste was also noted on the eastern side of the junction (Plate 7).

Plate 6: The disused junction within the centre of site, facing east.

Plate 7: Fly tipping on the eastern side of the disused junction, facing south-east.

The south-eastern section of the site also formed open space comprising hummocky and water logged ground, with previous ground work evident by vehicle tracks and a stockpile of unknown material and (Plate 8). This section of the site also has a large fenced off pond on the southern border forming a balancing pond to receive discharged water from storm drains.

Plate 8: South-eastern section of site.

The site walkover also identified a gas pipeline to be present on site, leading in from the southern border of site adjacent to Applewood Farm Carvery, through the centre and out through the northern border of site, confirming the route shown within the plan included as Figure 1.

3.2 Development Proposal

It is understood that the site will be used for the construction of 5 No. industrial plot areas ranging in size from 2.6 to 1 ha, each inclusive of warehouses and office space, parking, associated

hardstanding yard areas and green open space. The proposed development layout is shown in Figure 1 below which includes the total site (Blue line) along with the industrial plot areas (red line).

Figure 1: Proposed Development Layout.

4 GEOLOGY AND HYDROGEOLOGY

4.1 Geology

The geology at the site is indicated by the British Geological Survey (BGS) online digital mapping database and BGS sheet no 085 (1:50 000, Solid Edition), to comprise superficial deposits formed of Till, Diamicton.

The solid geology at the site is indicated to comprise primarily Pennine Middle Coal Measures Formation, described as mudstone, siltstone and sandstone. The Newton Heath Sandstone is indicated to underlie the far south-western tip of the site and is indicated to lie along the southern boundary.

No artificial deposits or Made Ground are indicated by the GroundSure report to be present at the site although it is considered likely that artificial deposits and/or Made Ground may be present in the southern areas of the site due to the presence of a road and observed evidence of earthworks having been undertaken.

There are no records of landslips within 500m of the study site.

4.2 Hydrogeology and Hydrology

The bedrock underlying the site has been classified by the Environment Agency (EA), as a Secondary A aquifer. These are described as permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. The superficial deposits at the site are classified as a Secondary (Undifferentiated) Aquifer.

The maximum groundwater vulnerability for the study site is described as LOW.

No active groundwater, surface water or potable abstraction licences are noted within the Groundsure report to be present within 1 km of the site.

The site is not identified by the Groundsure report to lie within any Source Protection Zones.

The Groundsure report indicates that no major watercourses run within 1 km of the site. 18 No. minor water courses inclusive of rivers, streams, lakes and canals are indicated to be present within 250m of the site, of which 6 No. are onsite, these include the following;

- 2 No. Lake loch or reservoirs which contain water all year round; and

- 4 No. inland river not influenced by normal tidal action noted to contain water all year round.

4.3 Flooding

Data provided by the Environment Agency and included as part of the Groundsure report indicate the site not to be in an area at risk from flooding from rivers or sea (refer Appendix C for further details).

The maximum surface water flooding risk on site is Negligible at 1 in 30-year rainfall event within 50 m of the study site.

The maximum groundwater flooding risk on site is LOW.

The Groundsure report indicates no flood defences, or areas used for flood storage, within 250m of the site.

5 SITE HISTORY

From inspection of historical Ordinance Survey maps (Appendix D) from Groundsure report, the history of the development of the site is provided in Table 1 below.

Table 1 Summary of Historical Map Features

Map Sources	Notable on-site features	Notable features around site
1870, 1:2,500, County Series 1848-1850, 1:10,560, County Series. 1891-1892, 1:10,560, County Series 1893, 1:2,500, County Series 1904-1905, 1:10,560, County Series 1908, 1:2,500, County Series	The site is shown to comprise an open parcel of land sub-divided into approximately 5 separate fields with no known use – likely to be agricultural. Two footpaths are denoted on-site by 1904. One runs adjacent to the indicated central lateral hedgerow, whilst the other runs perpendicular from Garret Lane off the northern boundary, through to Chaddock Lane on the southern boundary. The two briefly meet in the centre of the site.	From 1848 the area surrounding the site is shown to comprise largely open fields. Chaddock Lane is shown in its current day position forming along the southern site boundary. The inlying area within the southern portion of the site is shown to contain 2 No. small structures thought to be residential properties and associated gardens. These structures are shown to undergo minor development by 1904-1905. These are labelled as 'Chaddock Lane House'. A Tram Road is shown to extend from north-west to south-east at approximately 110 m south-west of the site. This is shown to change to a Colliery Railway by 1891-1892. Chaddock hall which comprises a number of small buildings is shown at approximately 100 m south-east of the site with the development of an adjacent school shown by 1904-1905. A small settlement is shown approximately 500 m south-west of the site in the location of Astley with a disused colliery shown approximately 250 m south-west by 1893. A railway line is shown to extend from east to west at approximately 500 m north of the site.
1926-1927 1:10,560, County Series 1928, 1:2,500, County Series	The site remains unchanged.	The surrounding area is now shown to include a largely developed industrial area including Shakerley Colliery. A number of pits and shafts, a brick works and a network of railway sidings all extending from approximately 500 m north of the site are now denoted. Tyldesley Cemetery is also now shown at approximately 250 m north of the site. The Colliery Railway is now shown as a road. Further residential type development is now shown to the east and south-east of the site extending from Chaddock Hall along Chaddock Lane and within the area of Mosely Common.
1930 1:10,560, County Series 1948-1949 1:10,560, County Series 1951, 1:2,500, County Series 1951-1952, 1:1,250, National Grid 1955-1956 1:10,560, County Series 1959 1:10,560, County Series	The site remains unchanged.	The surrounding area is now shown to include additional residential properties extending from approximately 150 m east of the site. East Lancashire Road is now shown to extend from south-west to north-east of the site at approximately 250 m from the southern boundary in its current day position. Further development is also shown to at approximately 500 m north of the site with a school now shown adjacent to the northern site boundary. Further residential properties are shown to extend along Hen Fold Road (now A5082) approximately 250 m north-west of the site.

Map Sources	Notable on-site features	Notable features around site
1955-1956 1:10,560, County Series 1963-1966, 1:1,250, National Grid 1970-1972, 1:1,250, National Grid 1971-1974 1:10,560, County Series	By 1971 a 'drain' is indicated and denoted in the south-western section of the site.	The surrounding area is now shown to include a number of developments along Chaddock Lane includes a number of 'works' and 'depots' along with a large warehouse structure approximately 250 m south-east of the site. The buildings immediately south-west of the site, formerly 'Chaddock Lane House' is now labelled as 'Chaddock Lane Farm'. Further residential development within the area of Astley approximately 500 m south-west of the site surrounding the cemetery 250 m north of the site. 'Mosely Common' is shown to form its current day layout by 1971-1974.
1987-1991 1:10,000, National Grid 1988-1992, 1:1,250, National Grid 2001 1:10,000, National Grid 2010 1:10,000, National Grid	The site remains unchanged.	Further development of residential properties within the surrounding area which is now largely shown in its current day layout.
2022 1:10,000, National Grid	The site is now shown to include a road in the position of the current day Astley Park Way. Two small streams are indicated on-site, one approximately running in tandem with the central lateral hedgerow, the other leading from the far south-western corner up to the central hedgerow.	The surrounding area remains largely unchanged

The subject site was an open parcel of land believed to be agricultural from 1848 (earliest records). At this time, the area surrounding the site also comprised of largely open fields while in the immediate surrounding area Chaddock Lane formed the southern site boundary. 2 No. small structures, thought to be residential properties with associated gardens, were located in the area now occupied by the 'Applewood Farm Dining and Carvery' south-west of the site. By 1971 these are labelled as 'Chaddock Lane Farm' indicating that the site may have been associated with this farm around this time. A 'tram road' was shown at approximately 110 m south-west of the site and Chaddock hall at approximately 100 m south-east of the site.

The historical maps recorded only minor changes to the site, the most significant of which were the denoting of two footpaths by 1904 and a drain in the south-west corner by 1971. The site then remained unchanged until c.2015 at which time 'Astley Park Way' was constructed upon the site leading on from the south off Chaddock Lane.

The surrounding area has been progressively developed from c. 1926 at which time Shakerley Colliery and its associated infrastructure (including a number of pits and shafts, a brick works and a network of railway sidings) were denoted to extend from approximately 500 m north of the site.

A general increase in the number and density of residential housing the area has also occurred over the time period in question.

6 ENVIRONMENTAL DATA

6.1 Environmental Permits, Incidents and Registers

The Groundsure report indicates that there is three recorded licenced pollution release (Part A(2)/B) within 250 m of the site detailed as ‘roadstone coating processes’ located 173 m south-west of the site by ‘Aggregate Ltd (Kennedy Asphalt Ltd)’.

There are no other reported environmental permits, incidents or registers noted by the Groundsure report within 250 m of the study site.

6.2 Landfill and Other Waste Sites

There are 2 No. recorded licenced waste sites within 250 m of the site as reported by the Groundsure report, these are listed as ‘material recycling treatment facilities’ located 81 m south-west of the site. The permits were issued on 03-03-2003, with no expiry dates listed. An effective date of 26-10-2005 is indicated on the permit relating to regulations (waste) licence number RRL001.

The Groundsure report also indicates there to be 28 No. Waste Exceptions within 250 m of the site. Of these 4 No. are noted to be within 100 m of the site and are listed as follows:

- 1 No. storing waste exception at 54 m south-east of the site for non-agricultural waste only;
- 2 No. storing waste exceptions at 62 m south-east of the site, not on a farm; and
- 1 No. using waste exception at 91 m south-west of the site for non-agricultural waste only.

There are no current or historical landfills noted by the Groundsure report to exist within 250 m of the site.

6.3 Current/historical Industrial Land Uses

The Groundsure report indicates that there are 27 records of historical industrial land uses within 250 m of the site. Of these, 2 No. are indicated on-site and 10 No. are within 100 m of the site. These include;

- 2 No. ‘unspecified depots’ indicated to be onsite (1973 to 1991), however upon closer inspection of the map in the Groundsure report these are adjacent to the south-western site boundary;

- 6 No. ‘unspecified works’ located 4 m south-west (1967), 17 m south-east (1973), 29 m south (1967 and 1973), 41 m south (1973) and 58 m south (1959);
- 2 No. ‘unspecified depots’ located 5 m south-west (1973 to 1991);
- 1 No. ‘textile engraving works’ located at 59 m south (1956); and
- 1 No. ‘industrial estate’ located 82 m south-east (1991).

The Groundsure report also identifies a total 66 No. historical tanks and energy features within 250 m of the stie. Of these 10 No. are located within 100 m of the site and listed as follows:

- 3 No. ‘electricity substation’ located on-site (1981, 1992 and 1993);
- 1 No. ‘electricity transformer’ located on the north-eastern site boundary (1972);
- 2 No. ‘electricity substation’ located 1 m south-west (both records 1988);
- 1 No. ‘electricity substation’ located 10 m north-west of the site (1992);
- 1 No. ‘electrical transformer’ located 10 m north-west of the site (1972);
- 1 No. ‘electricity substation’ located 11 m north-west (1981);
- 1 No. ‘electricity substation’ located 82 m south-east of the site (1996);
- 4 No. ‘unspecified tank’ located 68 m south of the site (1981, 1988, 1988 and 1992); and
- 1 No. ‘unspecified tank’ located 83 m south-east of the site (1996).

6.4 Designated Environmental Sensitive Sites

The site is indicated to be within the ‘River Glaze NVZ’ Nitrate Vulnerable Zone for surface water.

There are no further of other environmental sites noted by the Groundsure report to be within 250 m of the site.

6.5 Unexploded Ordinance

A Zetica high level UXO risk assessment identifies the site to contain a Low risk of unexploded ordinance. See stand-alone UXO bomb risk map by Zetica (Appendix F)

6.6 Natural Hazards

1. The maximum Shrink-Swell hazard rating identified on the study site is classed as 'Very Low': this suggests that ground conditions area predominantly low plasticity. No special actions required to avoid problems due to shrink-swell clays. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with shrink-swell clays;

2. The maximum Running Sand hazard rating identified on the study site is 'Very Low': very low potential for running sand problems if water table rises or if sandy strata are exposed to water.

3. The maximum Compressible Deposits hazard rating identified on the study site is 'Negligible': no indicators for compressible deposits identified. No special actions required to avoid problems due to compressible deposits;

4. The maximum Collapsible Rocks hazard rating identified on the study site is 'Very Low': deposits with potential to collapse when loaded and saturated are unlikely to be present;

5. The maximum Landslide hazard rating identified on the study site is 'Very Low': slope instability problems are unlikely to be present. No special actions required to avoid problems due to landslides;

6. The maximum Ground Dissolution and Soluble Rocks hazard rating identified on the study site is 'Negligible': soluble rocks are not present in the search area. No special actions required to avoid problems due to soluble rocks;

The information gained from the Groundsure report regarding natural hazards is information relating to the bedrock. For this reason, the information under natural hazards does not represent likely hazards for any potential overlying Made Ground.

6.7 Mining, Extraction and Natural Cavities

The site is located within a designated coal mining reporting area and Development High Risk Area as defined by the Coal Authority. The Groundsure report indicates that there 1 No. underground workings within 500 m of the site which is noted as;

- 1 No. disused colliery at 365 m south-west.

There are no further recorded natural cavities, non-coal mining cavities, brine extraction, gypsum extraction, tin mining or clay mining reported within the Groundsure report within 500 m of the site boundary.

The Coal Authority Consultants Coal Mining report indicates that the site is on a coalfield. A summary of the findings of the Consultants Coal Mining Report is included below:

- 2 no. workable coal seam outcrops are present within the site boundary including;
    - Worsley Four Feet, bearing of outcrop 83° outcropping within the northern area of the site; and
    - Worsley Four Feet, bearing of outcrop 84° outcropping within the northern area of the site;
- There are no recorded opencast coal mines, Coal Authority managed tips or remediation sites within 500 m of the site;
- The Coal Authority has not received damage notice or claim for the site or any property within 50 m of the site.
- The Coal Authority has no record of a mine gas emission requiring action with 500 m of the site; and
- The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

6.8 Ground Workings

The Groundsure report indicates that there are 37 surface ground workings within 500 m of the site.

- 35 No. ‘ponds’ located 39 m north-west to 219 m south of the site (1851 to 1991);
- 1 No ‘cemetery’ located 250 m north of the site (1926); and
- 1 No. ‘sewage tank’ located 202 m north-west of the site (1904).

6.9 Natural Ground Subsidence

The maximum hazard rating of natural subsidence within the study site boundary is classed as ‘very low’.

6.10 Borehole Records

There are 11 reported BGS borehole records within 250 m of the site. The nearest available borehole records reported by the Groundsure report are located 163 m south of the site. The associated

borehole log indicates Topsoil overlying ‘stiff to very stiff brown silty sandy clay with stone and grey fissures’ to approximately 4.0 m below ground level (bgl). This material becomes ‘firm/stiff brown silty sandy clay with stone’ to 7.2 m bgl, underlain by ‘soft/firm brown/grey/silty laminated clay’ to approximately 8.2 m bgl. Below approximately 8.2 m bgl the soils encountered were described as ‘stiff brown silty sandy clay with stone’ becoming ‘very dense brown silty gravelly sand’ below 8.9 m bgl. The borehole was terminated at 10 m bgl.

6.11 Estimated Background Soil Chemistry

Records of background estimated soil chemistry within the site boundary taken from the Groundsure report:

- Arsenic (AS) 15 mg/kg
- Cadmium (Cd) 1.8 mg/kg
- Chromium (Cr) 60 – 90 mg/kg
- Nickel (N) 15 – 30 mg/kg
- Lead (Pb) 300 – 1200 mg/kg
- Bioaccessible Lead (Pb) 240 – 720 mg/kg

6.12 Ground Gas & Radon

The site is not in a radon affected area, defined as areas where less than 1% of homes are above the action level, hence no protective measures are necessary in the construction of new dwellings or extensions.

7 PRELIMINARY RISK ASSESSMENT

In accordance with UK guidance set out in the Environment Agency's Land Contamination Risk Management (LCRM) best practice, environmental risks are defined by a pollutant linkage. Hence there needs to be a source of pollution and a receptor on which it can have an adverse effect. In order to complete the linkage there needs to be a route, or pathway, by which the source can affect the receptor as follows:

Source → Pathway → Receptor

The risks have been assessed on the understanding that the proposed end use will be commercial/industrial.

7.1 Conceptual Site Model

The CSM and plausible pollutant linkages are defined below based on the desk study review of publicly available information collated in the previous sections. The CSM forms part of the preliminary risk assessment to identify and assess the potential hazards at the site and estimate then evaluate the risk in line with stage 1 of the LCRM guidance. This assessment is based on the proposed residential end use.

7.2 Sources

A review of the site's history and environmental setting has identified a potential presence of Made Ground with an unknown composition. It is therefore considered plausible that contaminants of concern (CoCs) and as such a source of contamination maybe present as summarised below. The list of contaminants has been established through a review of Annexe 3 in the Guidance for the Safe Development of Housing on Land Affected by Contamination R&D66: 2008 Volume 2.

Potential CoCs include:

- Metals - arsenic, cadmium, chromium, chromium VI, copper, lead, mercury, nickel, selenium, zinc;
- Polycyclic Aromatic Hydrocarbons (PAH);
- Total Petroleum Hydrocarbons (TPH); and
- Ground gas (carbon dioxide and methane).

7.3 Pathways

The key pathway for migration of CoCs include the following:

7.3.1 Human Health

1. Ingestion of source soils or groundwaters;
2. Inhalation of source dusts and vapours; and
3. Direct skin exposure (dermal contact) with soils.

7.3.2 Environmental

As the site is situated overlying a Secondary A and Secondary (Undifferentiated) Aquifer, the potential for infiltration, leaching and dissolution of ground source chemicals into underlying groundwater is possible, therefore, the following potential environmental pathways exist:

1. On-site vertical leaching of CoCs in soils to shallow groundwater; and
2. Lateral migration of impacted groundwater towards surface water receptors.

7.4 Receptors

The key potential receptors identified are:

Human Health

1. Current and future site users; and
2. Site development and maintenance workers.

Environmental

1. Groundwater directly beneath the site; and
2. Water courses on-site.

7.4.1 Potential Pollutant Linkages

Potential pollutant linkages are listed with their associated risk ratings in Appendix E. The assessment was undertaken in accordance with CIRIA C552, Contaminated Land Risk Assessment, a Guide to Good Practice and R&D66, Guidance for the Safe Development of Housing on Land Affected by Contamination.

7.5 Risk Evaluation - Proposed End Use

The potential pollutant linkages risks have been evaluated. The majority of risks were identified as **MODERATE-LOW**. A number of **MODERATE** and **MODERATE-LOW** risks for future site users, proposed buildings/foundations/services and controlled waters have been identified which warrant investigation, these are summarised in Table 2.

Such investigation should include a suitable number of exploratory hole locations from which samples should be recovered (both soil and water) and analysed for the suite of contaminants listed in Section 7.2. The exploratory holes should be completed with gas and groundwater monitoring wells sufficient to characterise the ground gas regime and groundwater flow direction.

It should be noted that the risks summarised in Table 2 are based on contamination being generally present across the whole site. However, it is anticipated from the site history that the extent of any contamination is likely to be isolated with generally low source concentrations.

Table 2 Pollutant Linkages Rated Greater than LOW

Source Description	Pathway Description	Receptor Description	Risk Rating
Ground Gas	Inhalation	Future Commercial	MODERATE
Ground Gas	Migration/entry into voids, basements, enclosed spaces	Future Commercial	MODERATE
Ground Gas	Migration/entry into voids, basements, enclosed spaces	Buildings, Foundations	MODERATE
INORGANIC contamination in Soil/Made Ground	Ingestion	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Ingestion	Future Commercial	MODERATE-LOW
INORGANIC contamination in Soil/Made Ground	Inhalation	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Inhalation	Future Commercial	MODERATE-LOW
INORGANIC contamination in Soil/Made Ground	Direct skin exposure (dermal contact)	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Direct skin exposure (dermal contact)	Future Commercial	MODERATE-LOW
ORGANIC contamination in Soil/Made Ground	Direct Contact	Buildings, Foundations	MODERATE-LOW
ORGANIC contamination in GW	Direct Contact	Buildings, Foundations	MODERATE-LOW
Other Inorganic contamination in soil	Direct Contact	Buildings, Foundations	MODERATE-LOW
Other Inorganic contamination in GW	Direct Contact	Buildings, Foundations	MODERATE-LOW
INORGANIC contamination in GW	Migration	River/Stream	MODERATE-LOW
ORGANIC contamination in GW	Migration	River/Stream	MODERATE-LOW
Other Inorganic contamination in GW	Migration	River/Stream	MODERATE-LOW

7.6 Risk Evaluation – Current Users

The risk to current users has been assessed as **LOW**.

7.7 Risk Evaluation – Site Development and Maintenance Workers

Several risks greater than **LOW** have been identified with respect to site development and site maintenance workers as detailed in Appendix E. Ground investigation works are recommended to confirm and quantify the risk which is likely to be mitigated through provision of appropriate PPE. During the construction phase the potential risks to workers will be dealt with under the Health and Safety at Work Act (1974) and regulations made under the act. The investigation should include a suitable number of exploratory hole locations from which both soil and water samples can be recovered and analysed for the suite of the contaminants listed.

7.8 Statutory Risks

Under Part 2A of the Environmental Protection Act 1990 (Section 78A(2)) ***Contaminated Land*** is defined as:

> *"any land which appears to the LOCAL AUTHORITY in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that –*
>
> *"(a) SIGNIFICANT HARM is being caused or there is a SIGNIFICANT POSSIBILITY of such harm being caused; or*
>
> *"(b) POLLUTION OF CONTROLLED WATERS is being, or is likely to be, caused".*

The significant possibility of significant harm (SPOSH) is difficult to define and at the time of writing DEFRA has begun a consultation and review in order to clarify what SPOSH means. Notwithstanding, SPOSH must be defined and applied by the relevant local authority or by the EA in the case of special sites (typically, heavily polluted sites such as large gas works, military sites, etc.). From the preliminary evaluation of risks, it is unlikely that the land at the site would be determined by the local authority as Contaminated Land under the Part 2A regime.

The National Planning Policy Framework (NPPF - 2012) puts the onus on local planning authorities to develop their own guidance and processes for dealing with potentially contaminated land under planning. This was revised and updated in 2019.

The key paragraphs from NPPF - 2019 relating to planning and dealing with land contamination are listed below.

170. Planning policies and decisions should contribute to and enhance the natural and local environment by:
- a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan);
- b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland;
- c) maintaining the character of the undeveloped coast, while improving public access to it where appropriate;
- d) minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures;
- e) preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should,
- f) wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans; and
- g) remediating and mitigating despoiled, degraded, derelict, contaminated and unstable land, where appropriate.

178. Planning policies and decisions should ensure that:
- a) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation);
- b) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and
- c) adequate site investigation information, prepared by a competent person, is available to inform these assessments.

179. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.

183. The focus of planning policies and decisions should be on whether proposed development is an acceptable use of land, rather than the control of processes or emissions (where these are subject to separate pollution control regimes). Planning decisions should assume that these regimes will operate effectively. Equally, where a planning decision has been made on a particular development, the planning issues should not be revisited through the permitting regimes operated by pollution control authorities.

Therefore, early engagement with the local authority and their environmental health/pollution control staff is advised.

8 CONCLUSIONS

A summary of research undertaken within this report includes a site walkover, investigation of historical maps and environmental data and review of British Geological Maps,

The findings from this investigation include;

1. The site has historically comprised open, potentially agricultural, land with no notable development undertaken on it until between 2010 to 2022 at which point a road was constructed upon the site;

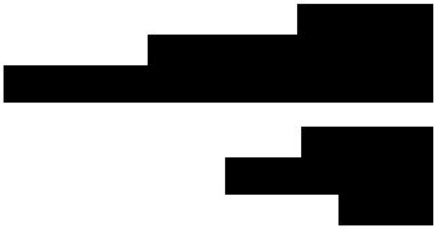
2. The site walkover suggests the site is predominantly open fields, with areas in the south featuring evidence of earthworks and the construction of a road. The site is currently used by locals for dog walking. An isolated area in the south-east of the site of fly tipped waste in the form of building materials is present. The site slopes from north to south, with some overgrown areas in the south-west, and hedgerows running laterally and vertically through the site. A small brook runs along the lateral hedgerow, with a drain running vertically from the south-western corner meeting the brook in the centre of the site. A pond is located in the far south-western corner;

3. The geology underlying the site includes bedrock formed of the Pennine Middle Coal Measures Formation with the southern tip of the site comprising Newton Heath Sandstone. No Made Ground is indicated by the BGS to be present upon the site although there is considered to be the potential for Made Ground to be present associated with historical activities at the site.

Potential Contaminants of Concern are based on a broad suite detailed in Section 7.2. This is considered to be representative of the sites former historical agricultural use along with the potential presence of Made Ground of unknown composition and any possibility of contamination within the Made Ground. It is however not considered likely that gross contamination will be present at the site.

Receptors on site will be future commercial site users, including construction and maintenance workers. Environmental receptors have been identified to be the Secondary-A Aquifer directly beneath the site along with surface water features upon the site.

The preliminary risk assessment concluded that the site poses a **MODERATE** and **LOW-MODERATE** risk from contamination to future site users, proposed future buildings and controlled waters.



9 RECOMENDATIONS

Prior to any development it is recommended that an intrusive site investigation is carried out to enable characterisation of the nature, extent and chemistry of any Made Ground and/or contaminated soil. The aim of a ground investigation would be to delineate any potential contaminant sources and allow for a quantitative risk assessment to be undertaken in accordance with UK guidance set out in the Environment Agency's LCRM. This will facilitate future planning applications for the proposed development in line with planning guidance relating to the development of land potentially affected by contamination, which is detailed in the National Planning Policy Framework (NPPF), June 2019 and constitutes guidance for Local Planning Authorities (LPA).

In addition, further investigation will allow identification of any potential geotechnical constraints. Whilst geotechnical issues are not a material planning consideration, geotechnical data will be required to inform the design of the proposed development and mitigate the risks associated with the unknown ground conditions. Samples should also be obtained and scheduled accordingly to allow geotechnical and geo-environmental laboratory testing to be carried out. The focus of an intrusive site investigation would be:

- Determining the nature of the near surface materials across the site and also focussing on previously developed portions of the site;
- Geotechnical characterisation of the site for any future foundations, floor slab, hardstanding design and drainage;
- Chemical analysis of soil and groundwater across the site to determines/confirm the likely low levels of contamination anticipated; and
- Gas and groundwater monitoring.

1 Past land use

1.1 Historical industrial land uses

Records within 500m	86

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 12**

1.2 Historical tanks

Records within 500m	40

Tank features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 12**

2.4 Historical petrol stations

Records within 500m	2

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use - un-grouped map on **page 21**

3 Waste and landfill

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

3.1 Active or recent landfill

Records within 500m	0

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m	0

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m	0

Landfill sites identified from Local Authority records and high detail historical mapping.

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m	0

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.5 Historical waste sites

Records within 500m	0

Waste site records derived from Local Authority planning records and high detail historical mapping.

This data is sourced from Ordnance Survey/Groundsure and Local Authority records.

3.6 Licensed waste sites

Records within 500m	10

Active or recently closed waste sites under Environment Agency/Natural Resources Wales regulation.

Features are displayed on the Waste and landfill map on **page 33**

4.2 Current or recent petrol stations

Records within 500m	3

Open, closed, under development and obsolete petrol stations.

Features are displayed on the Current industrial land use map on **page 42**

ID	Location	Company	Address	LPG	Status
18	366m E	OBSOLETE	126, Mosley Common Road, Mosley Common, Worsley, Manchester, Greater Manchester, M28 1AN	Not Applicable	Obsolete
D	384m S	BP	East Lancashire Road, Astley, Manchester, Greater Manchester, M29 7HX	No	Open
E	443m SW	CO-OP	Manchester Road, Astley, Manchester, Greater Manchester, M29 7BQ	No	Open

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m	0

High voltage underground electricity transmission cables.

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m	0

High pressure underground gas transmission pipelines.

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m	0

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m	0

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

This data is sourced from the Health and Safety Executive.

4.7 Regulated explosive sites

Records within 500m	0

Sites registered and licensed by the Health and Safety Executive under the Manufacture and Storage of Explosives Regulations 2005 (MSER). The last update to this data was in April 2011.

This data is sourced from the Health and Safety Executive.

4.8 Hazardous substance storage/usage

Records within 500m	0

Consents granted for a site to hold certain quantities of hazardous substances at or above defined limits in accordance with the Planning (Hazardous Substances) Regulations 2015.

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m	0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m	0

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.11 Licensed pollutant release (Part A(2)/B)

Records within 500m	4

Records of Part A(2) and Part B installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

Features are displayed on the Current industrial land use map on **page 42**

ID	Location	Address	Details	
A	173m SW	Aggregate Industries Ltd (Kennedy Asphalt Ltd), Chaddock Lane, Astley, Tyldesley, Manchester, M29 7JS	Process: Roadstone Coating Processes Status: Current Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of enforcement: No Enforcements Notified Comment: No Enforcements Notified

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m	0

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m	5

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

Features are displayed on the Current industrial land use map on **page 42**

This data is sourced from the Environment Agency and Natural Resources Wales.

4.14 Pollutant release to surface waters (Red List)

Records within 500m	0

Discharges of specified substances under the Environmental Protection (Prescribed Processes and Substances) Regulations 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.15 Pollutant release to public sewer

Records within 500m	0

Discharges of Special Category Effluents to the public sewer.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.16 List 1 Dangerous Substances

Records within 500m	0

Discharges of substances identified on List I of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.17 List 2 Dangerous Substances

Records within 500m	0

Discharges of substances identified on List II of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.18 Pollution Incidents (EA/NRW)

Records within 500m	0

Records of substantiated pollution incidents. Since 2006 this data has only included category 1 (major) and 2 (significant) pollution incidents.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m	0

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

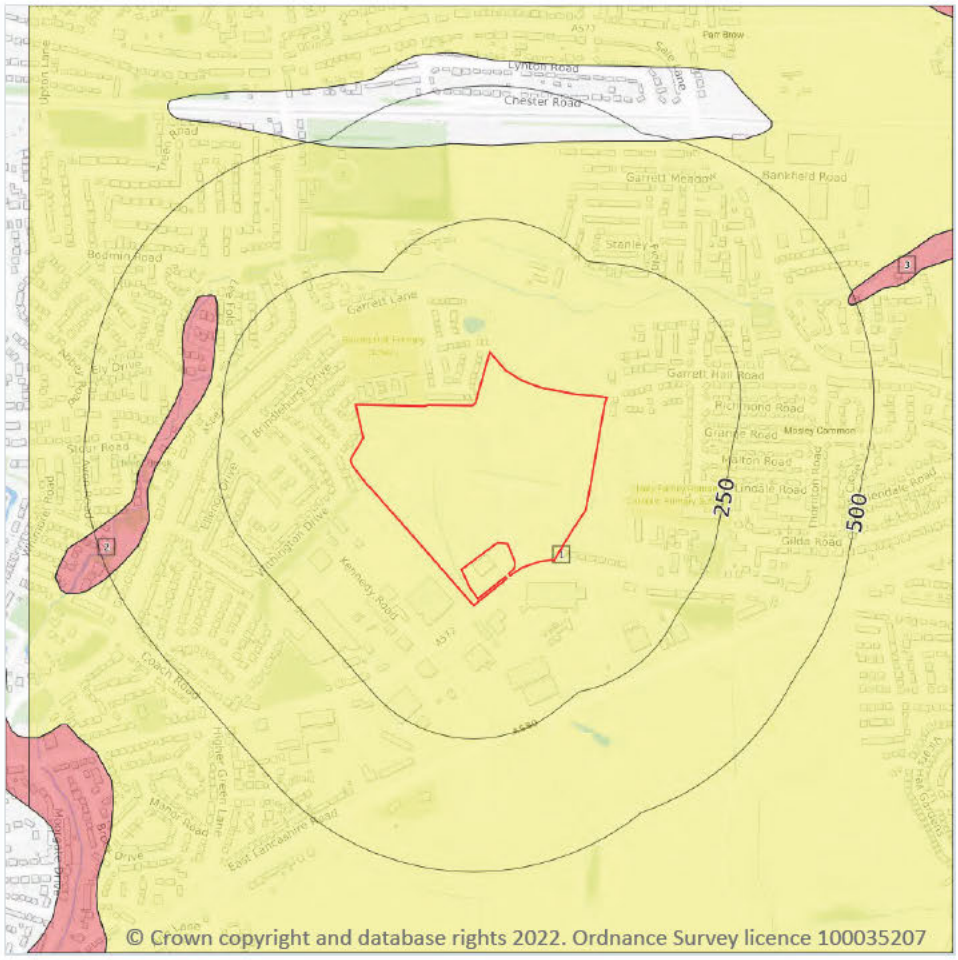
This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.20 Pollution inventory waste transfers

Records within 500m	0

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.



4.21 Pollution inventory radioactive waste

Records within 500m	0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer

Site Outline

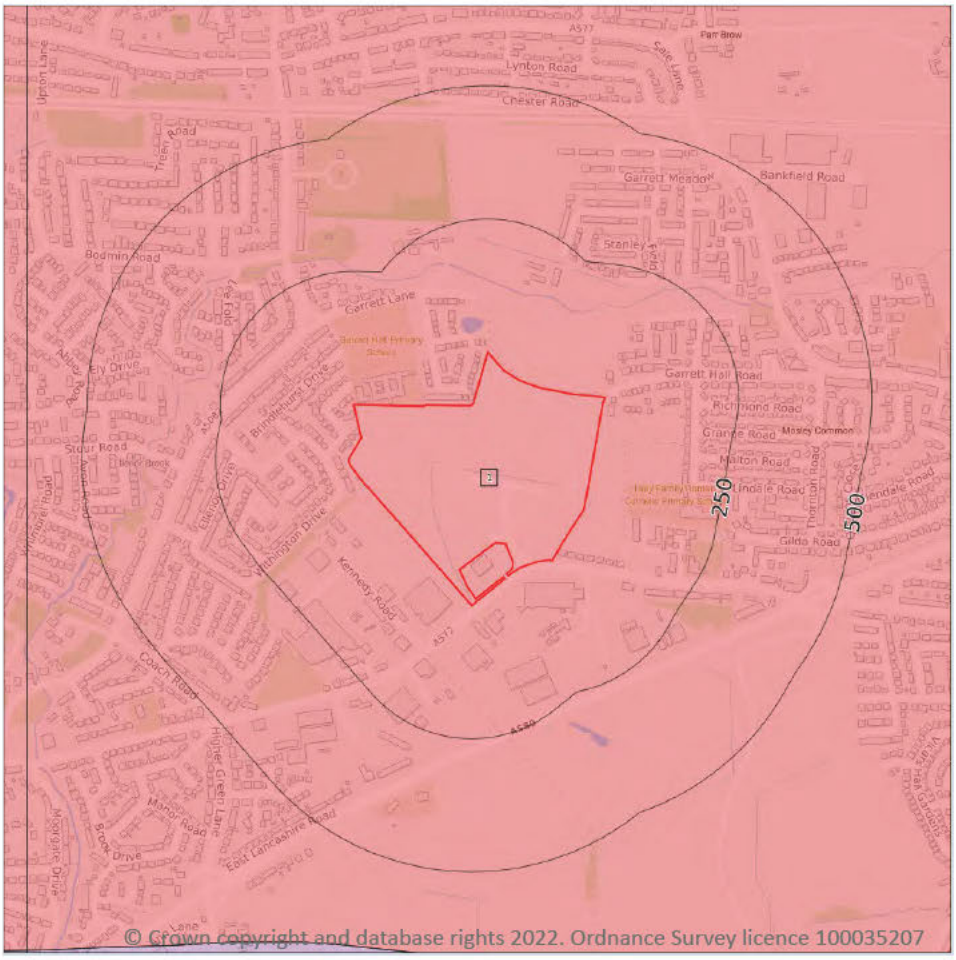
Search buffers in metres (m)

- Principal
- Secondary A
- Secondary B
- Secondary Undifferentiated
- Unproductive
- Unknown

5.1 Superficial aquifer

Records within 500m	3

Aquifer status of groundwater held within superficial geology.



Features are displayed on the Hydrogeology map on **page 51**

ID	Location	Designation	Description
1	**On site**	**Secondary Undifferentiated**	**Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type**
2	275m W	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

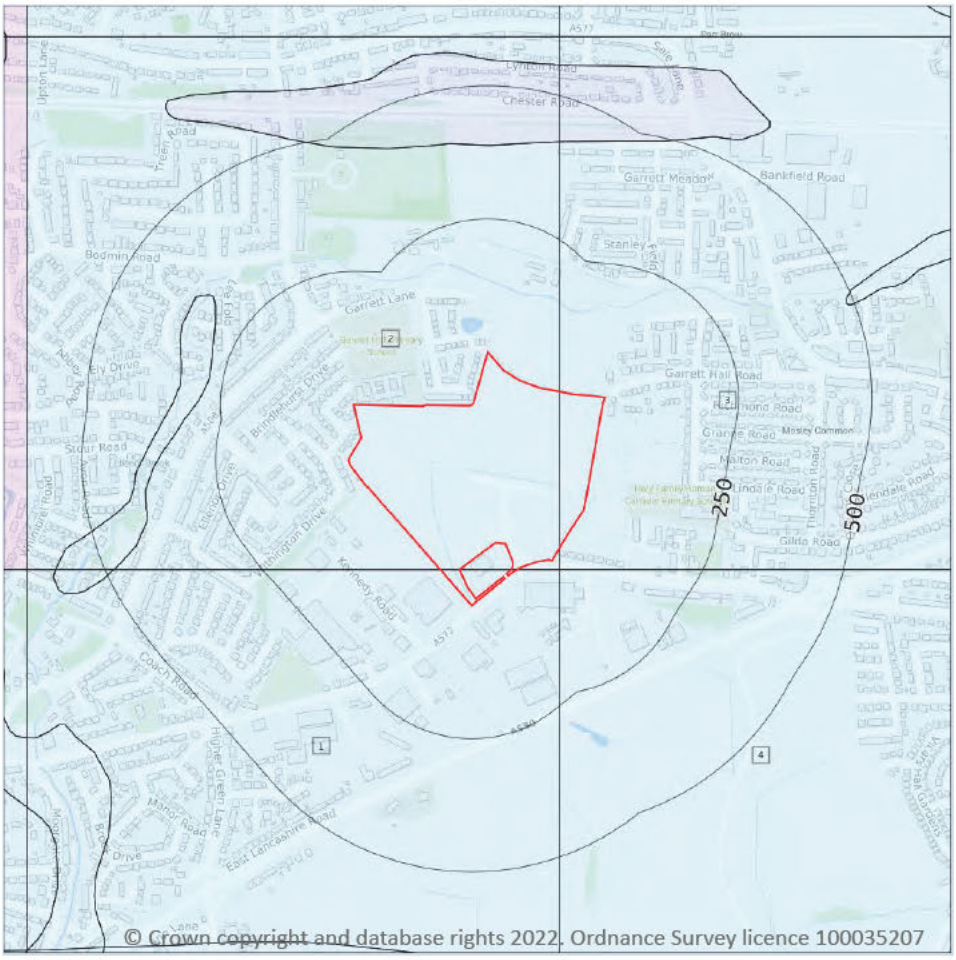
ID	Location	Designation	Description
3	487m E	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Bedrock aquifer

5.2 Bedrock aquifer

Records within 500m	1



Aquifer status of groundwater held within bedrock geology.

Features are displayed on the Bedrock aquifer map on **page 53**

ID	Location	Designation	Description
1	On site	Secondary A	**Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers**

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Groundwater vulnerability

5.3 Groundwater vulnerability

Records within 50m	4

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on **page 54**

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
1	On site	Summary Classification: Secondary superficial aquifer - Low Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Low Infiltration value: <40% Dilution value: 300-550mm/year	Vulnerability: Low Aquifer type: Secondary Thickness: >10m Patchiness value: >90% Recharge potential: High	Vulnerability: Low Aquifer type: Secondary Flow mechanism: Well connected fractures
2	On site	Summary Classification: Secondary superficial aquifer - Low Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Low Infiltration value: <40% Dilution value: >550mm/year	Vulnerability: Low Aquifer type: Secondary Thickness: 3-10m Patchiness value: >90% Recharge potential: Medium	Vulnerability: Low Aquifer type: Secondary Flow mechanism: Well connected fractures
3	On site	Summary Classification: Secondary superficial aquifer - Low Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Low Infiltration value: <40% Dilution value: >550mm/year	Vulnerability: Low Aquifer type: Secondary Thickness: 3-10m Patchiness value: >90% Recharge potential: Medium	Vulnerability: Low Aquifer type: Secondary Flow mechanism: Well connected fractures
4	21m SE	Summary Classification: Secondary superficial aquifer - Low Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Low Infiltration value: <40% Dilution value: 300-550mm/year	Vulnerability: Low Aquifer type: Secondary Thickness: >10m Patchiness value: >90% Recharge potential: Medium	Vulnerability: Low Aquifer type: Secondary Flow mechanism: Well connected fractures

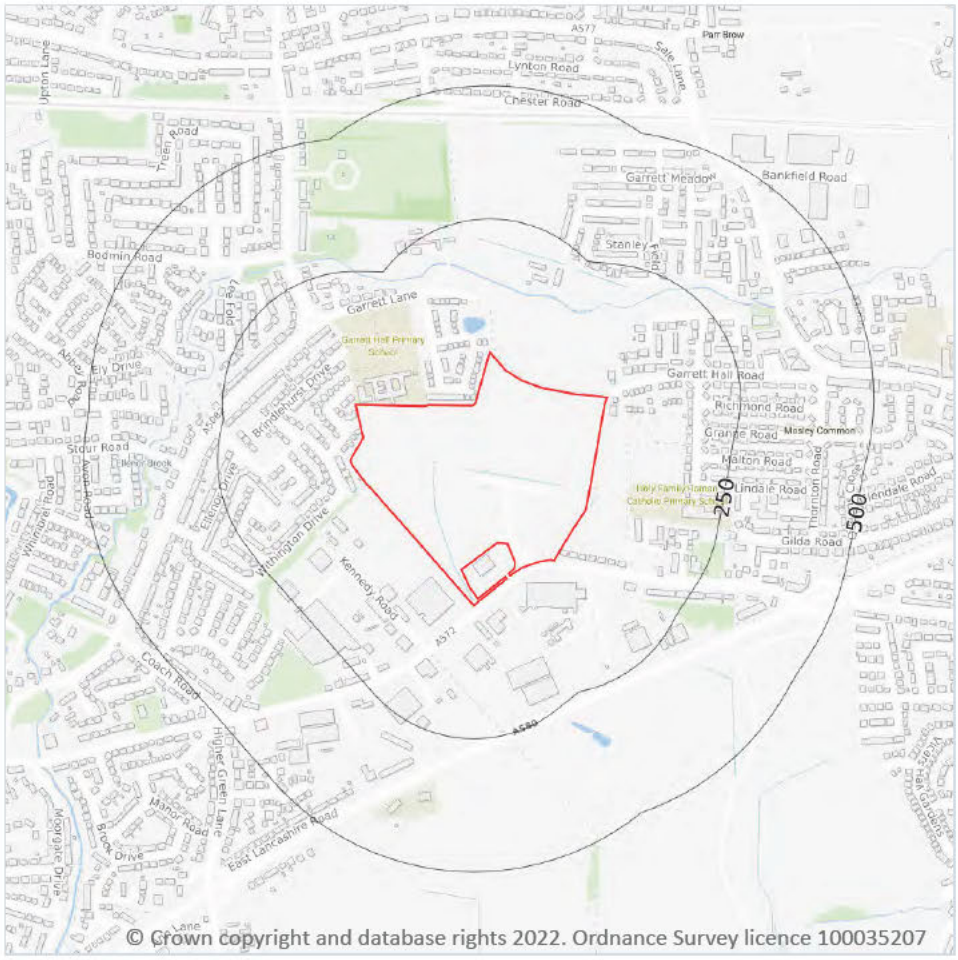
This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.4 Groundwater vulnerability- soluble rock risk

Records on site	0

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

This data is sourced from the British Geological Survey and the Environment Agency.



5.5 Groundwater vulnerability- local information

Records on site	0

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk.

This data is sourced from the British Geological Survey and the Environment Agency.

Abstractions and Source Protection Zones

Site Outline

Search buffers in metres (m)

5.6 Groundwater abstractions

Records within 2000m	0

Licensed groundwater abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, between two points (line data) or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.7 Surface water abstractions

Records within 2000m	1

Licensed surface water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

Features are displayed on the Abstractions and Source Protection Zones map on **page 57**

ID	Location	Details	
-	1248m SW	Status: Historical Licence No: NW/069/0016/004 Details: Hydraulic Testing Direct Source: Surface, Non-Tidal - North West Region Point: ASTLEY BROOK AT EAST LANCS PUMPING STATION Data Type: Point Name: BALFOUR BEATTY PLC Easting: 369891 Northing: 400116	Annual Volume (m^3): - Max Daily Volume (m^3): - Original Application No: - Original Start Date: 13/03/2014 Expiry Date: 08/04/2014 Issue No: 1 Version Start Date: 13/03/2014 Version End Date: -

This data is sourced from the Environment Agency and Natural Resources Wales.

5.8 Potable abstractions

Records within 2000m	0

Licensed potable water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

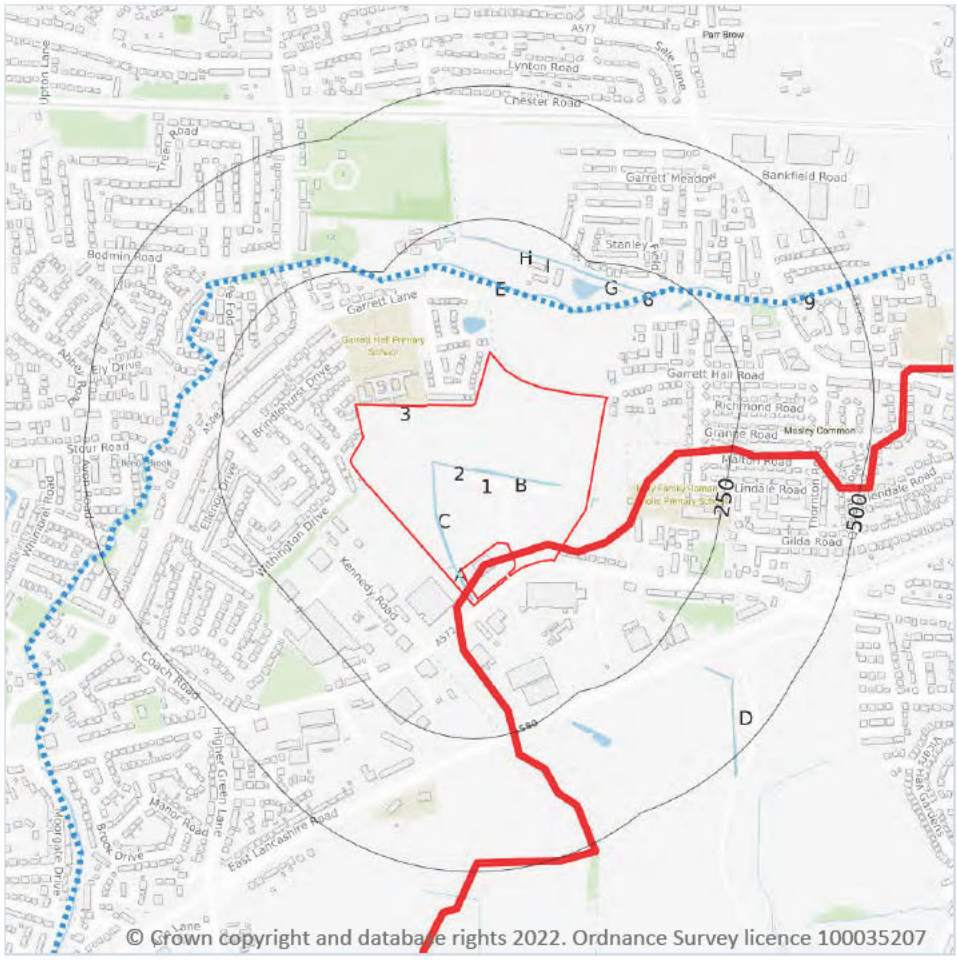
This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m	0

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

This data is sourced from the Environment Agency and Natural Resources Wales.



5.10 Source Protection Zones (confined aquifer)

Records within 500m	0

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

This data is sourced from the Environment Agency and Natural Resources Wales.

6 Hydrology

6.1 Water Network (OS MasterMap)

Records within 250m	18

Detailed water network of Great Britain showing the flow and precise central course of every river, stream, lake and canal.

Features are displayed on the Hydrology map on **page 60**

ID	Location	Type of water feature	Ground level	Permanence	Name
2	On site	Lake, loch or reservoir.	On ground surface	Watercourse contains water year round (in normal circumstances)	-

ID	Location	Type of water feature	Ground level	Permanence	Name
A	**On site**	**Inland river not influenced by normal tidal action.**	**On ground surface**	**Watercourse contains water year round (in normal circumstances)**	**-**
A	**On site**	**Inland river not influenced by normal tidal action.**	**On ground surface**	**Watercourse contains water year round (in normal circumstances)**	**-**

H	230m N	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	-

This data is sourced from the Ordnance Survey.

6.2 Surface water features

Records within 250m	11

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on **page 60**

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site	2

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on **page 60**

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
3	**On site**	**River**	**Astley Brook (Mersey)**	**GB112069061100**	**Glaze**	**Mersey Lower**
D	**On site**	**River**	**Shaw Brook**	**GB112069061090**	**Glaze**	**Mersey Lower**

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified	2

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on **page 60**

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
6	122m N	River	Astley Brook (Mersey)	GB112069061100	Moderate	Fail	Moderate	2019
-	840m SE	River	Shaw Brook	GB112069061090	Poor	Fail	Poor	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

6.5 WFD Groundwater bodies

Records on site	1

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

Features are displayed on the Hydrology map on **page 60**

ID	Location	Name	Water body ID	Overall rating	Chemical rating	Quantitative	Year
1	**On site**	**Sankey and Glaze Carboniferous aquifers**	**GB41202G100100**	**Poor**	**Poor**	**Good**	**2019**

This data is sourced from the Environment Agency and Natural Resources Wales.

7 River and coastal flooding

7.1 Risk of flooding from rivers and the sea

Records within 50m	0

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea (RoFRaS)/Flood Risk Assessment Wales (FRAW) models. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition. The risk categories for RoFRaS for rivers and the sea and FRAW for rivers are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance). The risk categories for FRAW for the sea are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 200 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 200 chance) or High (greater than or equal to 1 in 30 chance).

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m	0

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m	0

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m	0

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.5 Flood Storage Areas

Records within 250m	0

Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

This data is sourced from the Environment Agency and Natural Resources Wales.

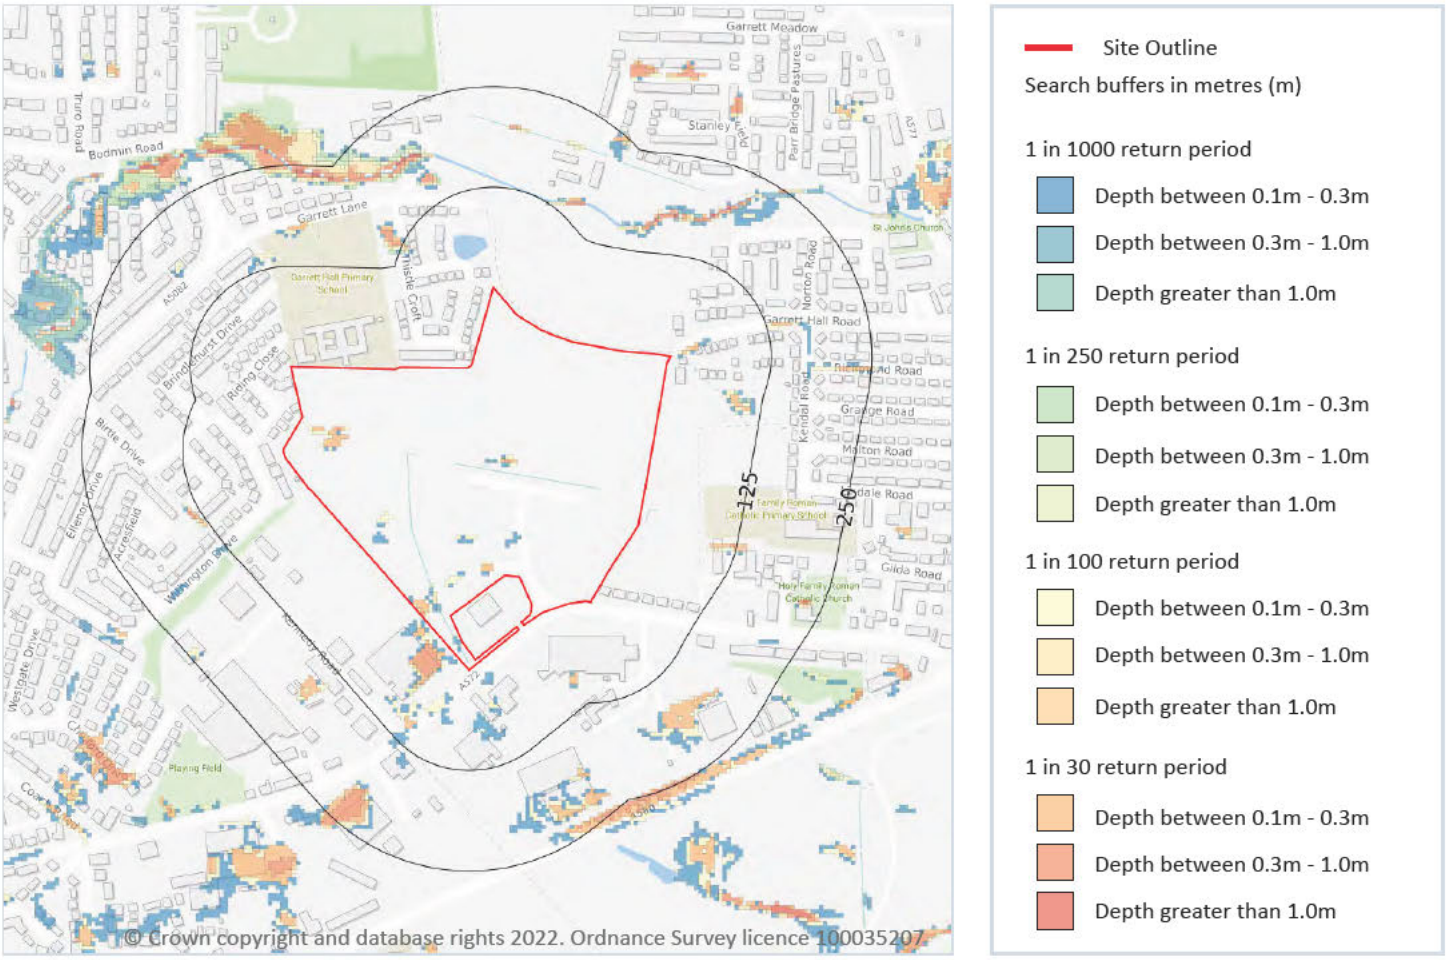
River and coastal flooding - Flood Zones

7.6 Flood Zone 2

Records within 50m	0

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

This data is sourced from the Environment Agency and Natural Resources Wales.



7.7 Flood Zone 3

Records within 50m	0

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

8.1 Surface water flooding

Highest risk on site	**1 in 30 year, 0.3m - 1.0m**
Highest risk within 50m	**1 in 30 year, 0.3m - 1.0m**

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on **page 67**

The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Greater than 1.0m
1 in 250 year	Between 0.3m and 1.0m
1 in 100 year	Between 0.3m and 1.0m
1 in 30 year	Between 0.3m and 1.0m

This data is sourced from Ambiental Risk Analytics.

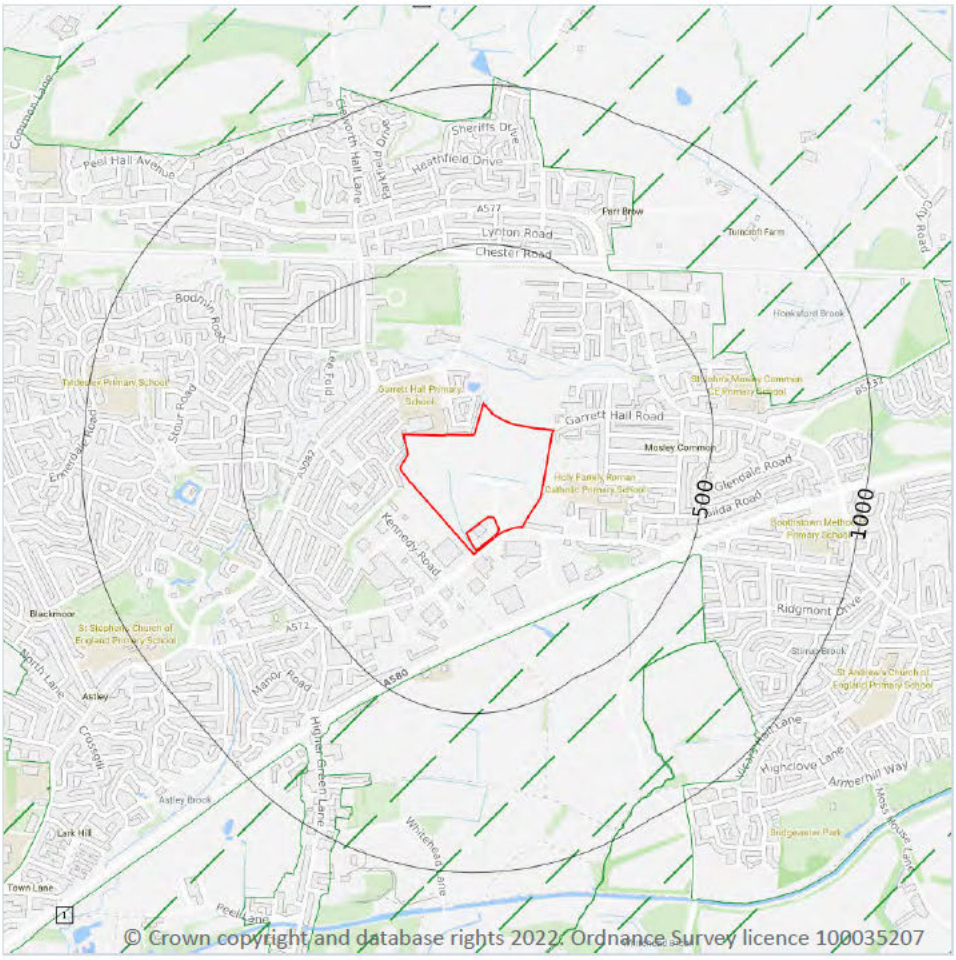
9.1 Groundwater flooding



Highest risk on site	**Low**
Highest risk within 50m	**Low**

Groundwater flooding is caused by unusually high groundwater levels. It occurs when the water table rises above the ground surface or within underground structures such as basements or cellars. Groundwater flooding tends to exhibit a longer duration than surface water flooding, possibly lasting for weeks or months, and as a result it can cause significant damage to property. This risk assessment is based on a 1 in 100 year return period and a 5m Digital Terrain Model (DTM).

Features are displayed on the Groundwater flooding map on **page 69**

This data is sourced from Ambiental Risk Analytics.

10 Environmental designations

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m	0

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m	0

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m	0

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m	0

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m	0

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m	0

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m	0

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m	0

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m	0

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m	0

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m	4

Areas designated to prevent urban sprawl by keeping land permanently open.

Features are displayed on the Environmental designations map on **page 70**

ID	Location	Name	Local Authority name
1	271m SE	Merseyside and Greater Manchester	Wigan
2	533m N	Merseyside and Greater Manchester	Wigan
3	585m SE	Merseyside and Greater Manchester	Salford
-	1631m N	Merseyside and Greater Manchester	Salford

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m	0

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m	0

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m	0

Special Protection Areas (SPAs) are areas designated (or 'classified') under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

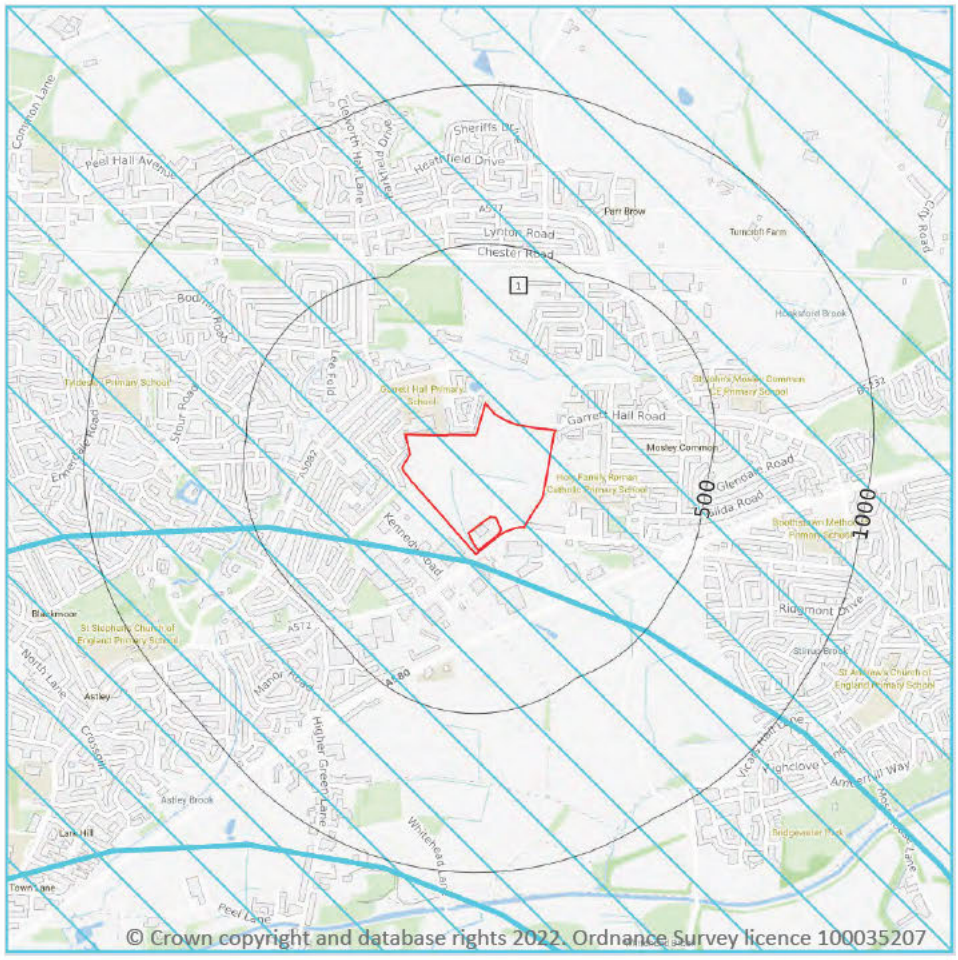
10.15 Nitrate Sensitive Areas

Records within 2000m	0

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones



Records within 2000m	1

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

Location	Name	Type	NVZ ID	Status
On site	**River Glaze NVZ**	**Surface Water**	**641**	**Existing**

This data is sourced from Natural England and Natural Resources Wales.

SSSI Impact Zones and Units

10.17 SSSI Impact Risk Zones

Records on site	1

Developed to allow rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

Features are displayed on the SSSI Impact Zones and Units map on **page 75**

ID	Location	Type of developments requiring consultation
1	On site	**Infrastructure - Airports, helipads and other aviation proposals.** **Air pollution - Any industrial/agricultural development that could cause air pollution (incl: industrial processes, livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 750m², manure stores > 3500t).** **Combustion - General combustion processes >50mw energy input. incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion.**

This data is sourced from Natural England.

10.18 SSSI Units

Records within 2000m	0

Divisions of SSSIs used to record management and condition details. Units are the smallest areas for which Natural England gives a condition assessment, however, the size of units varies greatly depending on the types of management and the conservation interest.

This data is sourced from Natural England and Natural Resources Wales.

11 Visual and cultural designations

Site Outline

Search buffers in metres (m)

- Listed buildings
- Conservation areas
- Conservation areas - no data
- National Parks
- Areas of Outstanding Natural Beauty
- Registered parks and gardens
- Scheduled Monuments
- World Heritage Sites

11.1 World Heritage Sites

Records within 250m	0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m	0

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m	0

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m	4

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

Features are displayed on the Visual and cultural designations map on **page 77**

ID	Location	Name	Grade	Reference Number	Listed date
1	103m E	Garden Wall And Stone Gatepiers At Chaddock Hall, Astley Mosley Common, Wigan, M28	II	1068485	18/07/1966
2	121m SE	Chaddock Hall, Astley Mosley Common, Wigan, M28	II	1356222	18/07/1966
3	179m SE	Barn At Chaddock Hall, Astley Mosley Common, Wigan, M28	II	1163209	18/07/1966
4	236m NW	Garrett Hall, Tyldesley, Wigan, M29	II	1163348	27/07/1987

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.5 Conservation Areas

Records within 250m	0

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

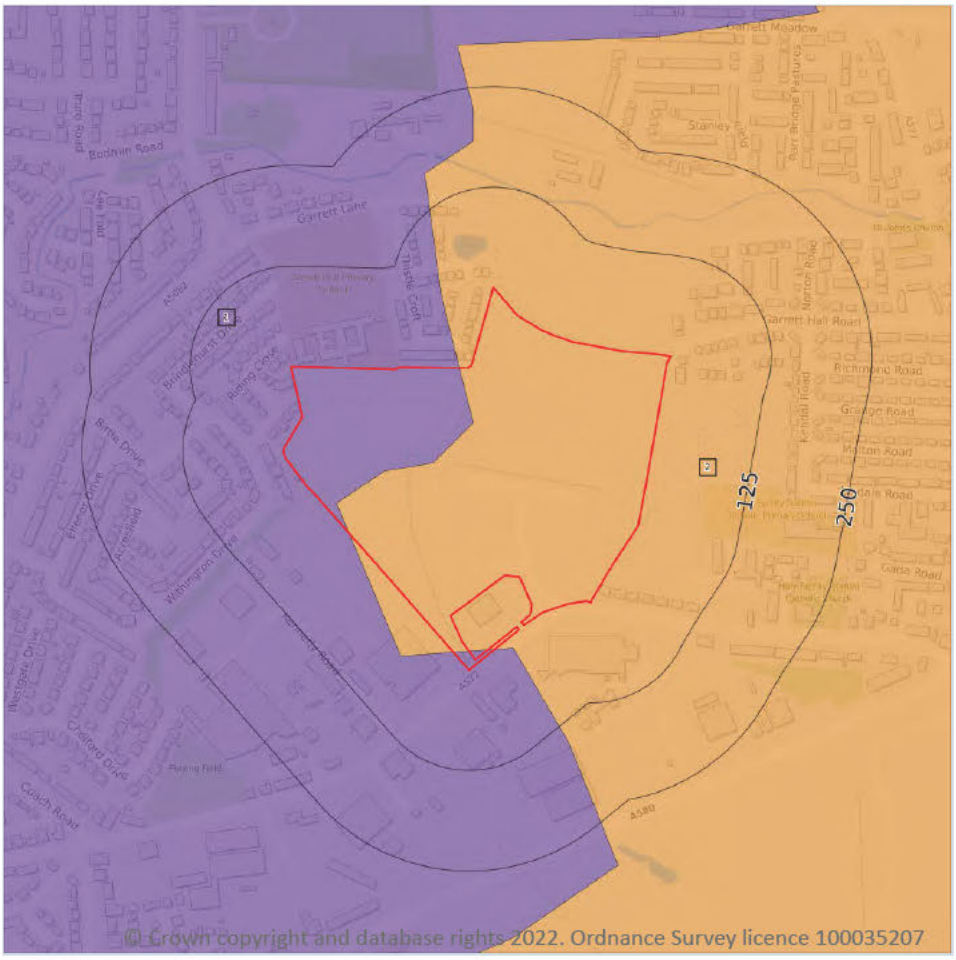
This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m	0

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.



11.7 Registered Parks and Gardens

Records within 250m	0

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

12 Agricultural designations

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

12.1 Agricultural Land Classification

Records within 250m	2

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on **page 80**

ID	Location	Classification	Description
1	On site	Urban	-
2	On site	Grade 3	**Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.**

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m	0

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m	0

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

This data is sourced from the Forestry Commission.

12.4 Environmental Stewardship Schemes

Records within 250m	0

Environmental Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. The schemes identified may be historical schemes that have now expired, or may still be active.

This data is sourced from Natural England.

12.5 Countryside Stewardship Schemes

Records within 250m	0

Countryside Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. Main objectives are to improve the farmed environment for wildlife and to reduce diffuse water pollution.

This data is sourced from Natural England.

13 Habitat designations

Site Outline

Search buffers in metres (m)

Priority Habitat Inventory
Open Mosaic Habitat
Limestone Pavement Orders

Habitat Networks

Primary Habitat
Restorable Habitat
Associated Habitats
Habitat Restoration-Creation
Network Enhancement Zone 1
Network Enhancement Zone 2

13.1 Priority Habitat Inventory

Records within 250m	1

Habitats of principal importance as named under Natural Environment and Rural Communities Act (2006) Section 41.

Features are displayed on the Habitat designations map on **page 82**

ID	Location	Main Habitat	Other habitats
1	247m W	Deciduous woodland	Main habitat: DWOOD (INV > 50%)

This data is sourced from Natural England.

13.2 Habitat Networks

Records within 250m	0

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

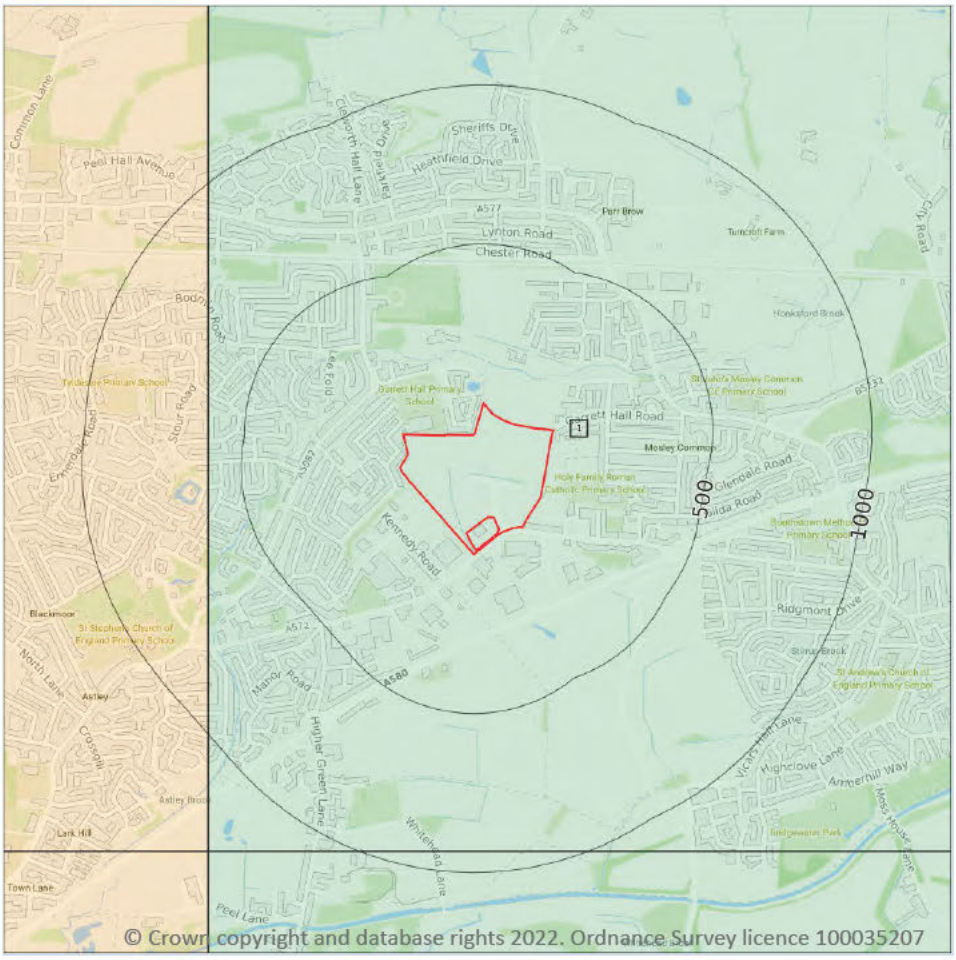
This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m	0

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

This data is sourced from Natural England.



13.4 Limestone Pavement Orders

Records within 250m	0

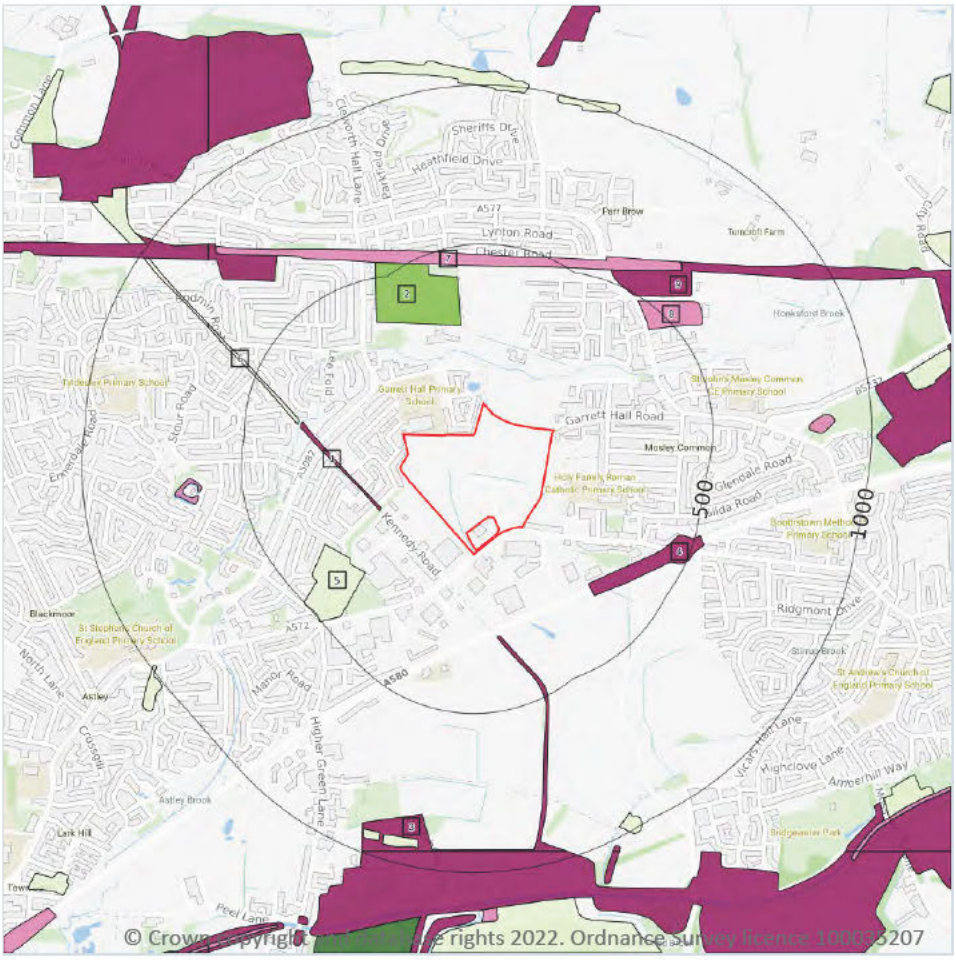
Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

14 Geology 1:10,000 scale - Availability

14.1 10k Availability

Records within 500m	1



An indication on the coverage of 1:10,000 scale geology data for the site, the most detailed dataset provided by the British Geological Survey. Either 'Full', 'Partial' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:10,000 scale - Availability map on **page 84**

ID	Location	Artificial	Superficial	Bedrock	Mass movement	Sheet No.
1	On site	Full	Full	Full	Full	SD70SW

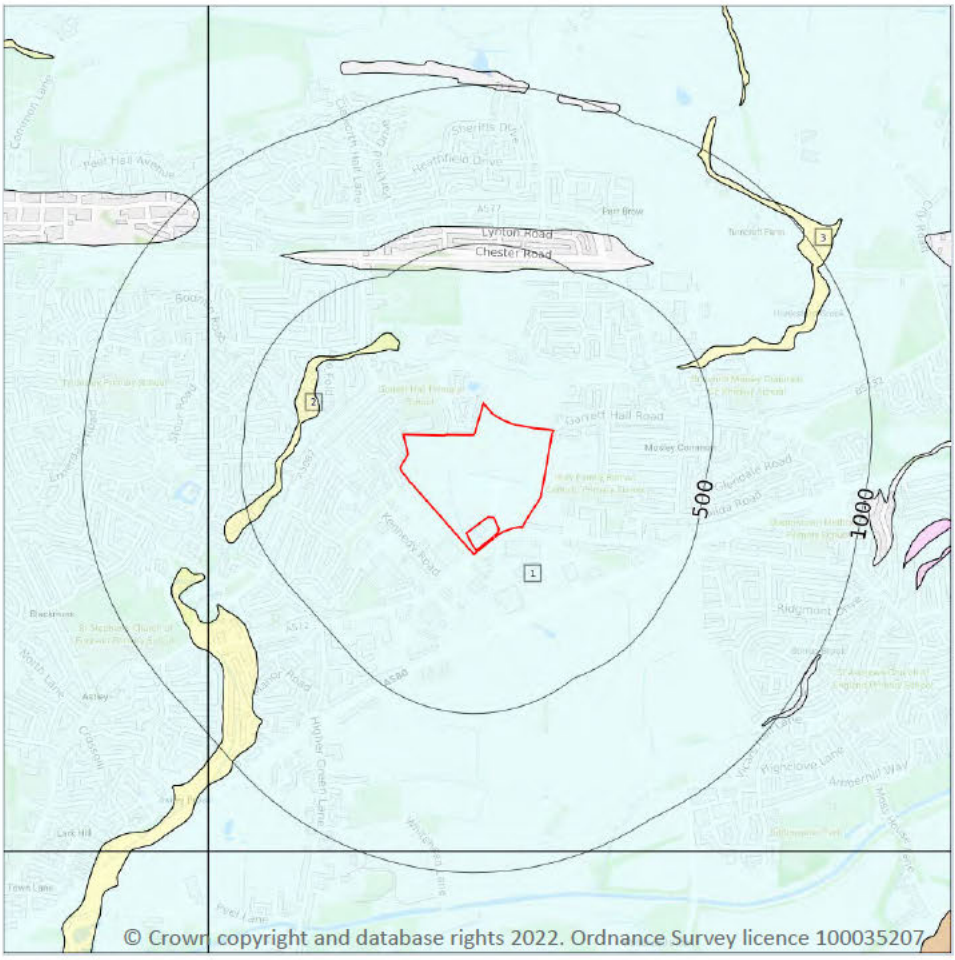
This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Artificial and made ground

14.2 Artificial and made ground (10k)

Records within 500m	9

Details of made, worked, infilled, disturbed and landscaped ground at 1:10,000 scale. Artificial ground can be associated with potentially contaminated material, unpredictable engineering conditions and instability.



Features are displayed on the Geology 1:10,000 scale - Artificial and made ground map on **page 85**

ID	Location	LEX Code	Description	Rock description
1	121m SW	MGR-ARTDP	Made Ground (Undivided)	Artificial Deposit
2	254m N	DDGR-UKNOWN	Disturbed Ground (Undivided)	Unknown/unclassified Entry
3	268m S	MGR-ARTDP	Made Ground (Undivided)	Artificial Deposit
4	273m SE	MGR-ARTDP	Made Ground (Undivided)	Artificial Deposit

ID	Location	LEX Code	Description	Rock description
5	295m SW	WMGR-ARTDP	Infilled Ground	Artificial Deposit
6	331m W	WMGR-ARTDP	Infilled Ground	Artificial Deposit
7	431m N	WGR-VOID	Worked Ground (Undivided)	Void
8	436m NE	WGR-VOID	Worked Ground (Undivided)	Void
9	494m NE	MGR-ARTDP	Made Ground (Undivided)	Artificial Deposit

This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Superficial

Site Outline

Search buffers in metres (m)

Landslip (10k)

Superficial geology (10k)
Please see table for more details.

14.3 Superficial geology (10k)

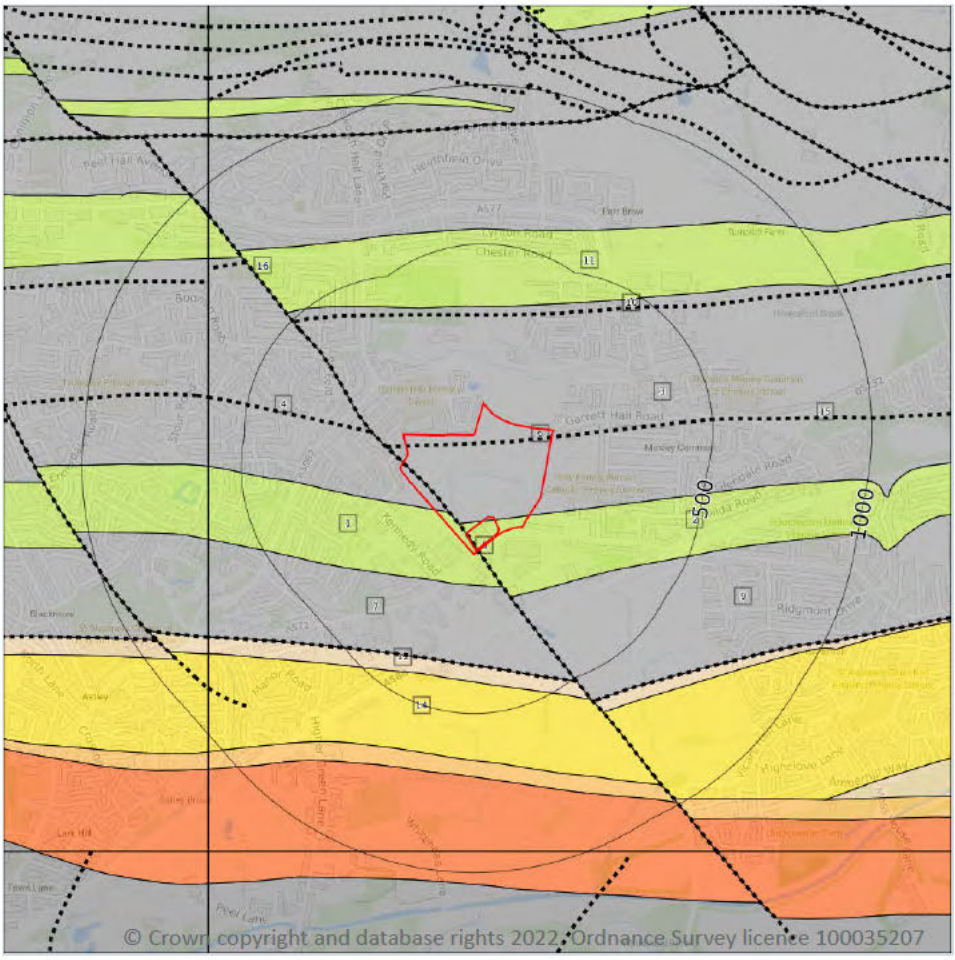
Records within 500m **3**

Superficial geological deposits at 1:10,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:10,000 scale - Superficial map on **page 87**

ID	Location	LEX Code	Description	Rock description
1	**On site**	**TILLD-DMTN**	**Till, Devensian - Diamicton**	**Diamicton**
2	266m N	ALV-XCZSV	Alluvium - Clay, Silt, Sand And Gravel	Clay, Silt, Sand And Gravel
3	435m NE	ALV-XCZSV	Alluvium - Clay, Silt, Sand And Gravel	Clay, Silt, Sand And Gravel

This data is sourced from the British Geological Survey.



14.4 Landslip (10k)

Records within 500m	0

Mass movement deposits on BGS geological maps at 1:10,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Bedrock

Site Outline

Search buffers in metres (m)

Bedrock faults and other linear features (10k)

Bedrock geology (10k)
Please see table for more details.

14.5 Bedrock geology (10k)

Records within 500m **9**

Bedrock geology at 1:10,000 scale. The main mass of rocks forming the Earth and present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 89**

ID	Location	LEX Code	Description	Rock age
1	On site	NHSS-SDST	Newton Heath Sandstone - Sandstone	Bolsovian Sub-age
2	On site	NHSS-SDST	Newton Heath Sandstone - Sandstone	Bolsovian Sub-age
3	On site	PMCM-MDSS	Pennine Middle Coal Measures Formation - Mudstone, Siltstone And Sandstone	Bolsovian Sub-age - Duckmantian Sub-age

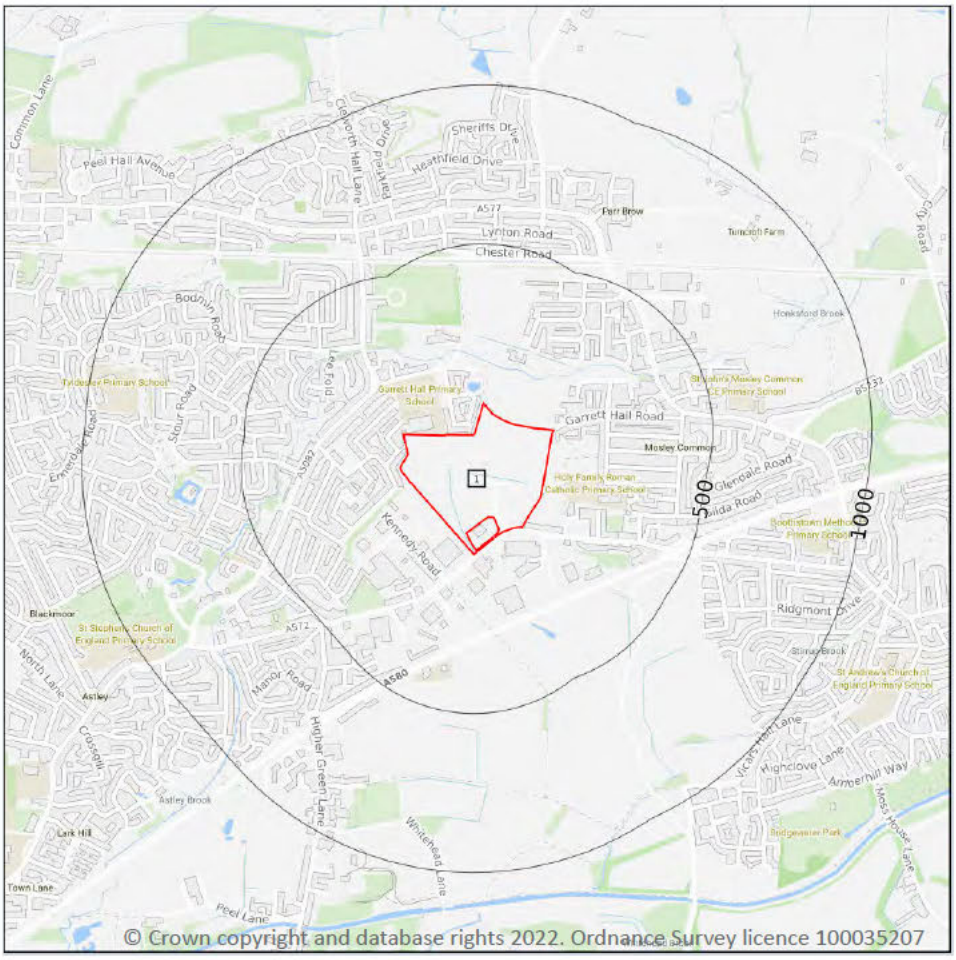
7	97m S	PMCM-MDSS	Pennine Middle Coal Measures Formation - Mudstone, Siltstone And Sandstone	Bolsovian Sub-age - Duckmantian Sub-age
9	177m SE	PMCM-MDSS	Pennine Middle Coal Measures Formation - Mudstone, Siltstone And Sandstone	Bolsovian Sub-age - Duckmantian Sub-age
11	305m N	NR-SDST	Nob End Rock - Sandstone	Bolsovian Sub-age
12	345m S	PUCM-MDSS	Pennine Upper Coal Measures Formation - Mudstone, Siltstone And Sandstone	Westphalian D Sub-age - Bolsovian Sub-age
14	396m S	WDR-SDST	Worsley Delf Rock - Sandstone	Bolsovian Sub-age

This data is sourced from the British Geological Survey.

14.6 Bedrock faults and other linear features (10k)

Records within 500m **7**



Linear features at the ground or bedrock surface at 1:10,000 scale of six main types; rock, fault, fold axis, mineral vein, alteration area or landform. Features are either observed or inferred, and relate primarily to bedrock.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 89**

ID	Location	Category	Description
5	**On site**	**FAULT**	**Normal fault, inferred; crossmarks on downthrow side**
6	**On site**	**ROCK**	**Coal seam, inferred**
8	101m W	ROCK	Coal seam, inferred
10	277m N	FOSSIL_HORIZON	Fossil horizon, marine band
13	345m S	FOSSIL_HORIZON	Fossil horizon, marine band coincident with bedrock geology boundary
15	403m E	ROCK	Coal seam, observed
16	464m NW	FAULT	Normal fault, inferred; crossmarks on downthrow side

This data is sourced from the British Geological Survey.

15 Geology 1:50,000 scale - Availability

15.1 50k Availability

Records within 500m	1

An indication on the coverage of 1:50,000 scale geology data for the site. Either 'Full' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:50,000 scale - Availability map on **page 91**

ID	Location	Artificial	Superficial	Bedrock	Mass movement	Sheet No.
1	On site	No coverage	Full	Full	No coverage	EW085_manchester_v4

This data is sourced from the British Geological Survey.

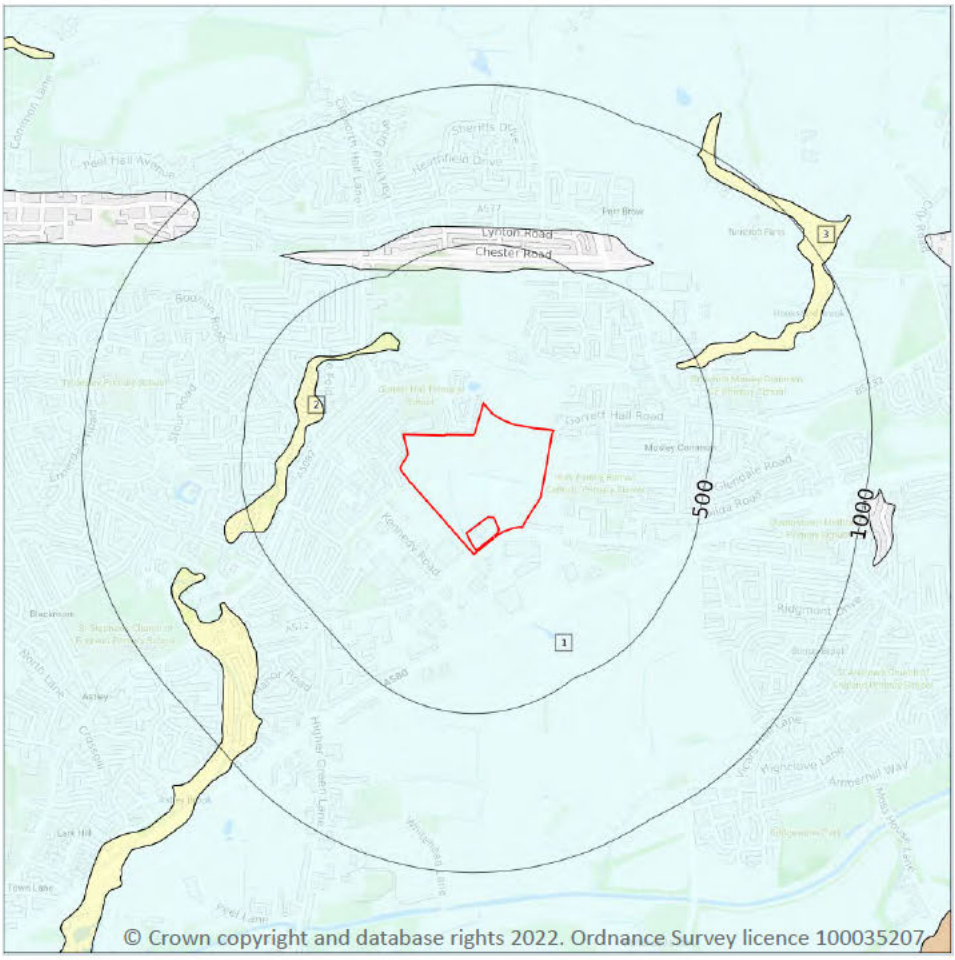
Geology 1:50,000 scale - Artificial and made ground

15.2 Artificial and made ground (50k)

Records within 500m	0

Details of made, worked, infilled, disturbed and landscaped ground at 1:50,000 scale. Artificial ground can be associated with potentially contaminated material, unpredictable engineering conditions and instability.

This data is sourced from the British Geological Survey.



15.3 Artificial ground permeability (50k)

Records within 50m	0

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any artificial deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Superficial

Site Outline

Search buffers in metres (m)

Landslip (50k)

Superficial geology (50k)
Please see table for more details.

15.4 Superficial geology (50k)

Records within 500m **3**

Superficial geological deposits at 1:50,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:50,000 scale - Superficial map on **page 93**

ID	Location	LEX Code	Description	Rock description
1	**On site**	**TILLD-DMTN**	**TILL, DEVENSIAN**	**DIAMICTON**
2	259m W	ALV-XCZSV	ALLUVIUM	CLAY, SILT, SAND AND GRAVEL
3	437m NE	ALV-XCZSV	ALLUVIUM	CLAY, SILT, SAND AND GRAVEL

This data is sourced from the British Geological Survey.

15.5 Superficial permeability (50k)

Records within 50m	1

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any superficial deposits (the zone between the land surface and the water table).

Location	Flow type	Maximum permeability	Minimum permeability
On site	**Mixed**	**High**	**Low**

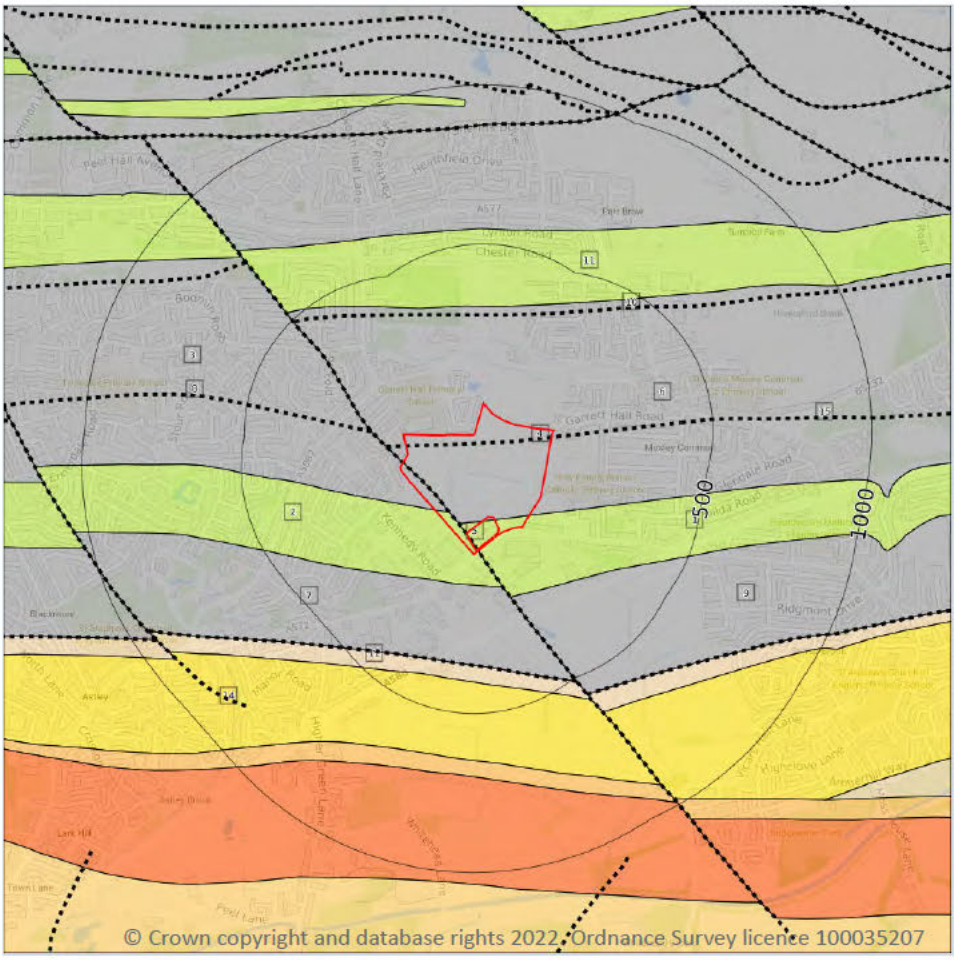
This data is sourced from the British Geological Survey.

15.6 Landslip (50k)

Records within 500m	0

Mass movement deposits on BGS geological maps at 1:50,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.



15.7 Landslip permeability (50k)

Records within 50m	0

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any landslip deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Bedrock

Site Outline

Search buffers in metres (m)

Bedrock faults and other linear features (50k)

Bedrock geology (50k)
Please see table for more details.

15.8 Bedrock geology (50k)

Records within 500m **9**

Bedrock geology at 1:50,000 scale. The main mass of rocks forming the Earth and present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

Features are displayed on the Geology 1:50,000 scale - Bedrock map on **page 95**

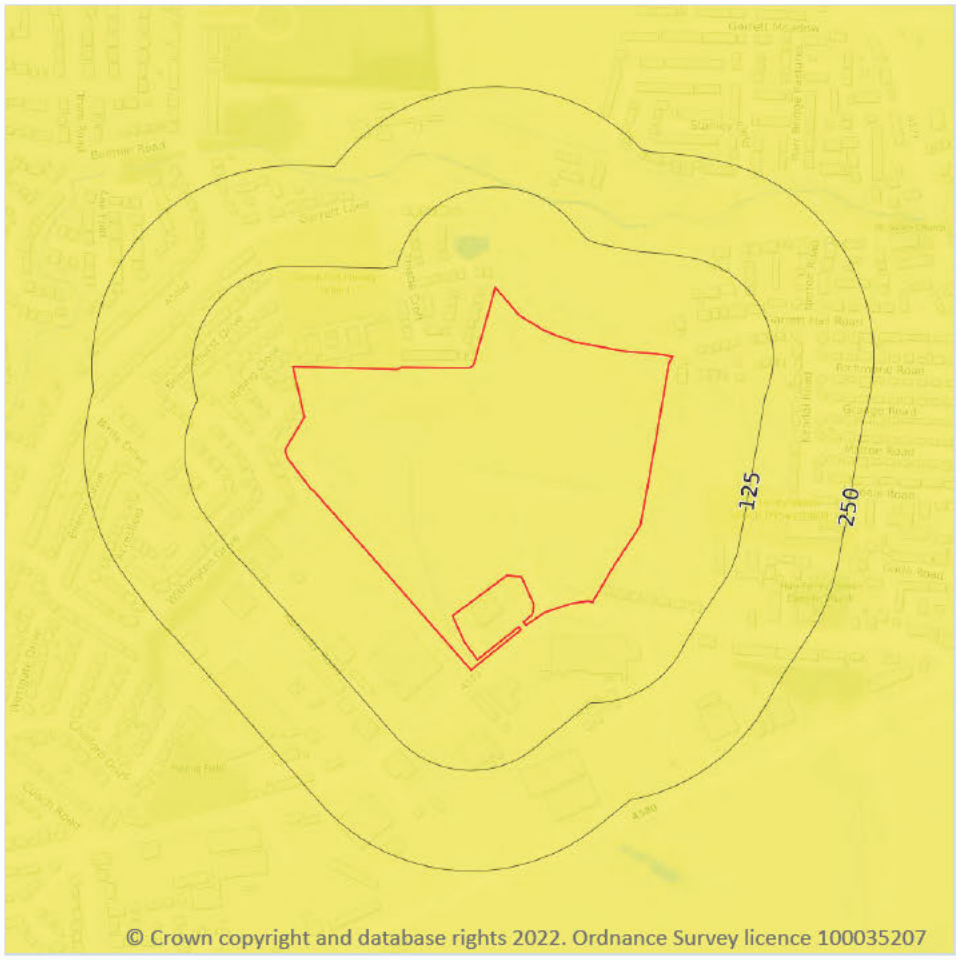
16.1 BGS Boreholes

Records within 250m	11

The Single Onshore Boreholes Index (SOBI); an index of over one million records of boreholes, shafts and wells from all forms of drilling and site investigation work held by the British Geological Survey. Covering onshore and nearshore boreholes dating back to at least 1790 and ranging from one to several thousand metres deep.



Features are displayed on the Boreholes map on **page 98**

ID	Location	Grid reference	Name	Length	Confidential	Web link
1	132m SE	370930 400840	CHADDOCK LANE BH5	-	Y	N/A

17 Natural ground subsidence - Shrink swell clays

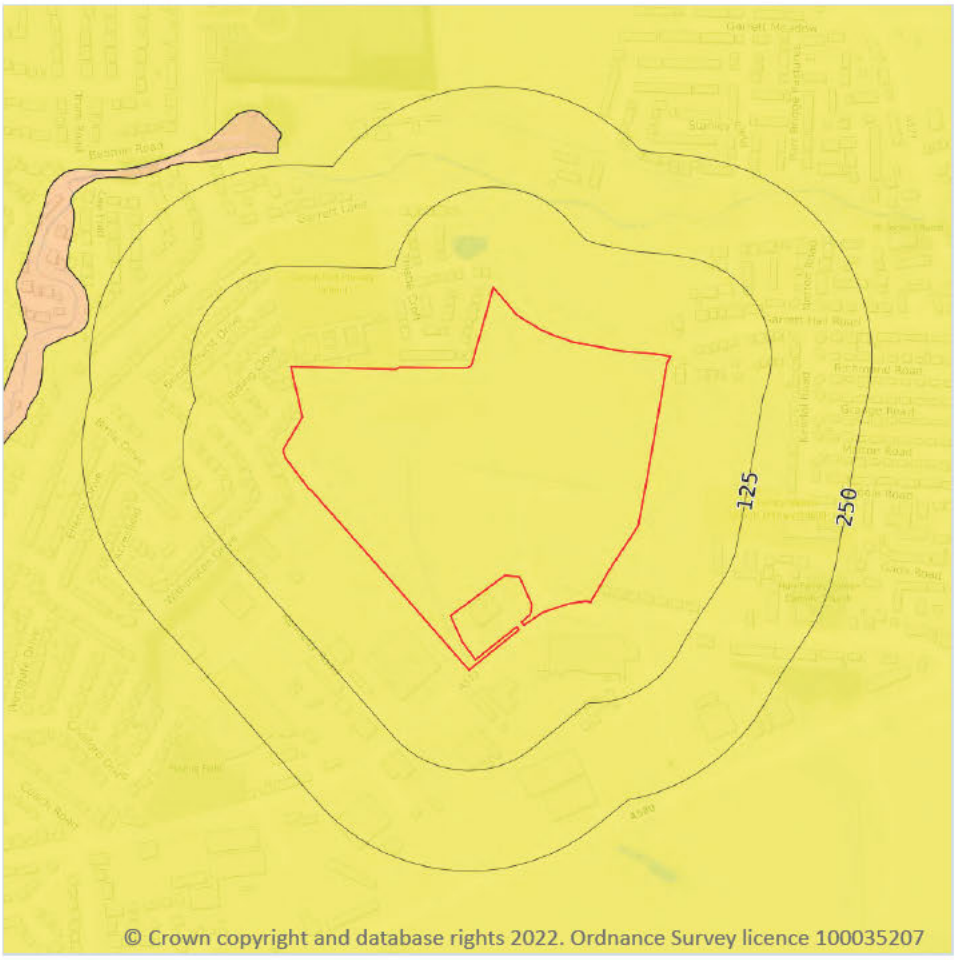
Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.1 Shrink swell clays

Records within 50m	1



The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

Features are displayed on the Natural ground subsidence - Shrink swell clays map on **page 100**

Location	Hazard rating	Details
On site	**Very low**	**Ground conditions predominantly low plasticity.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands

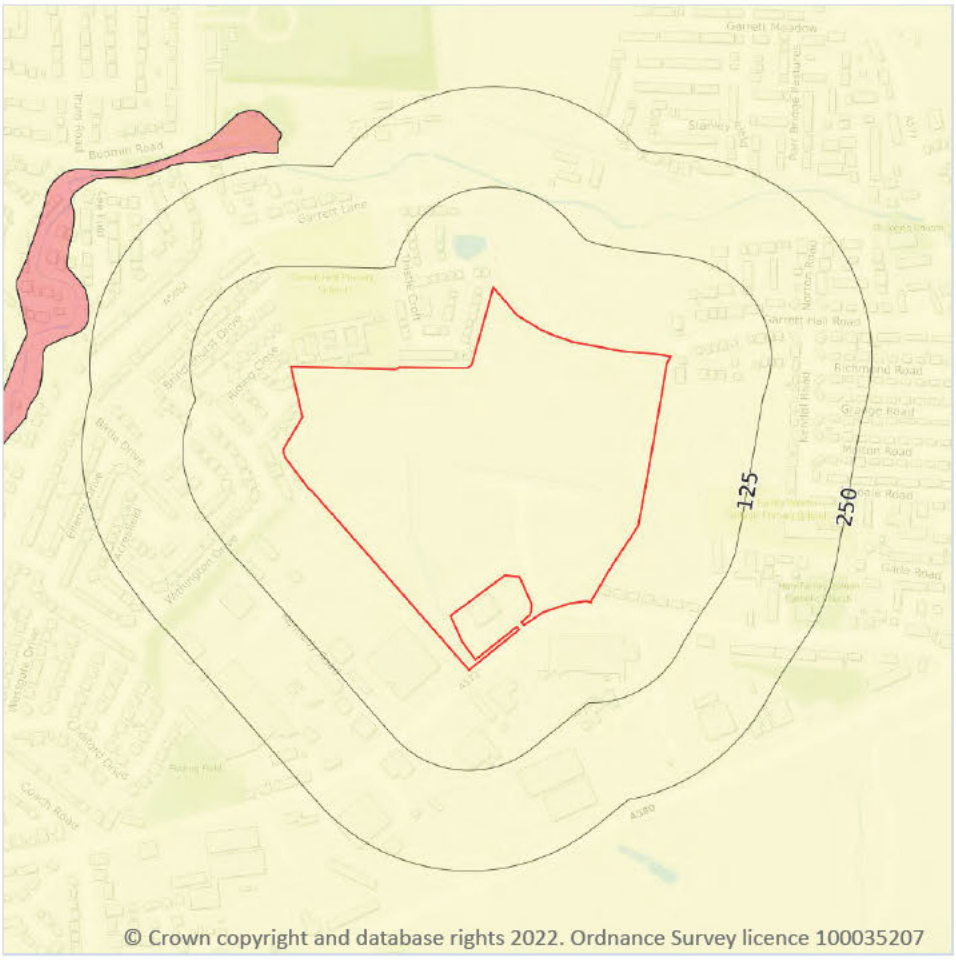
Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.2 Running sands

Records within 50m	1



The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

Features are displayed on the Natural ground subsidence - Running sands map on **page 101**

Location	Hazard rating	Details
On site	**Very low**	**Running sand conditions are unlikely. No identified constraints on land use due to running conditions unless water table rises rapidly.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits

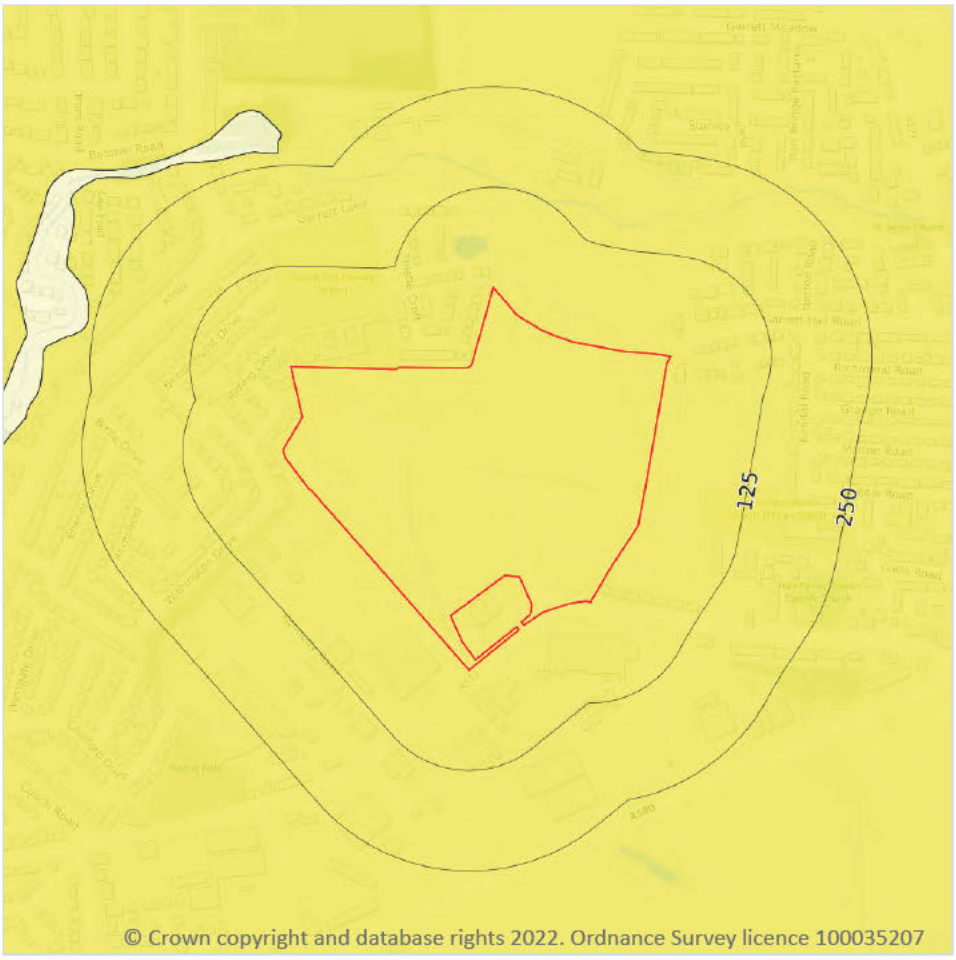
Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.3 Compressible deposits

Records within 50m	1



The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

Features are displayed on the Natural ground subsidence - Compressible deposits map on **page 102**

Location	Hazard rating	Details
On site	**Negligible**	**Compressible strata are not thought to occur.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Collapsible deposits

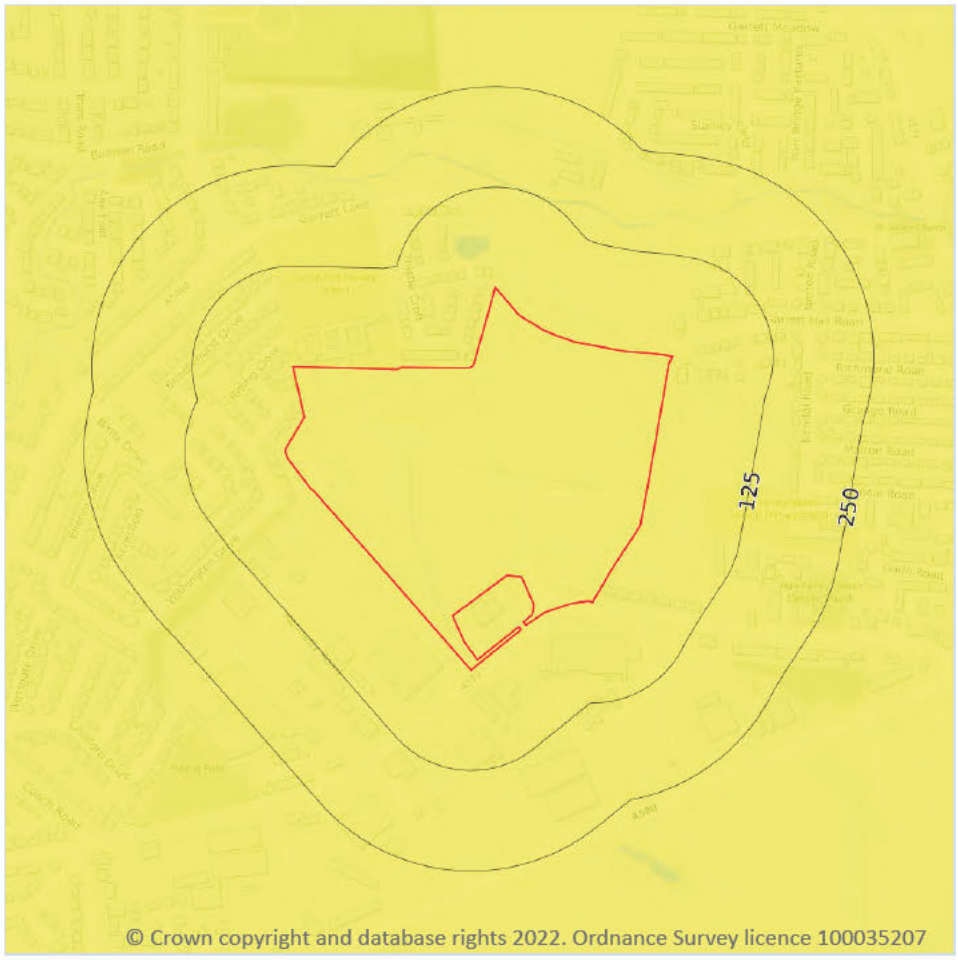
Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.4 Collapsible deposits

Records within 50m	1



The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on **page 103**

Location	Hazard rating	Details
On site	**Very low**	**Deposits with potential to collapse when loaded and saturated are unlikely to be present.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Landslides

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.5 Landslides

Records within 50m	1

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

Features are displayed on the Natural ground subsidence - Landslides map on **page 104**

Location	Hazard rating	Details
On site	**Very low**	**Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks

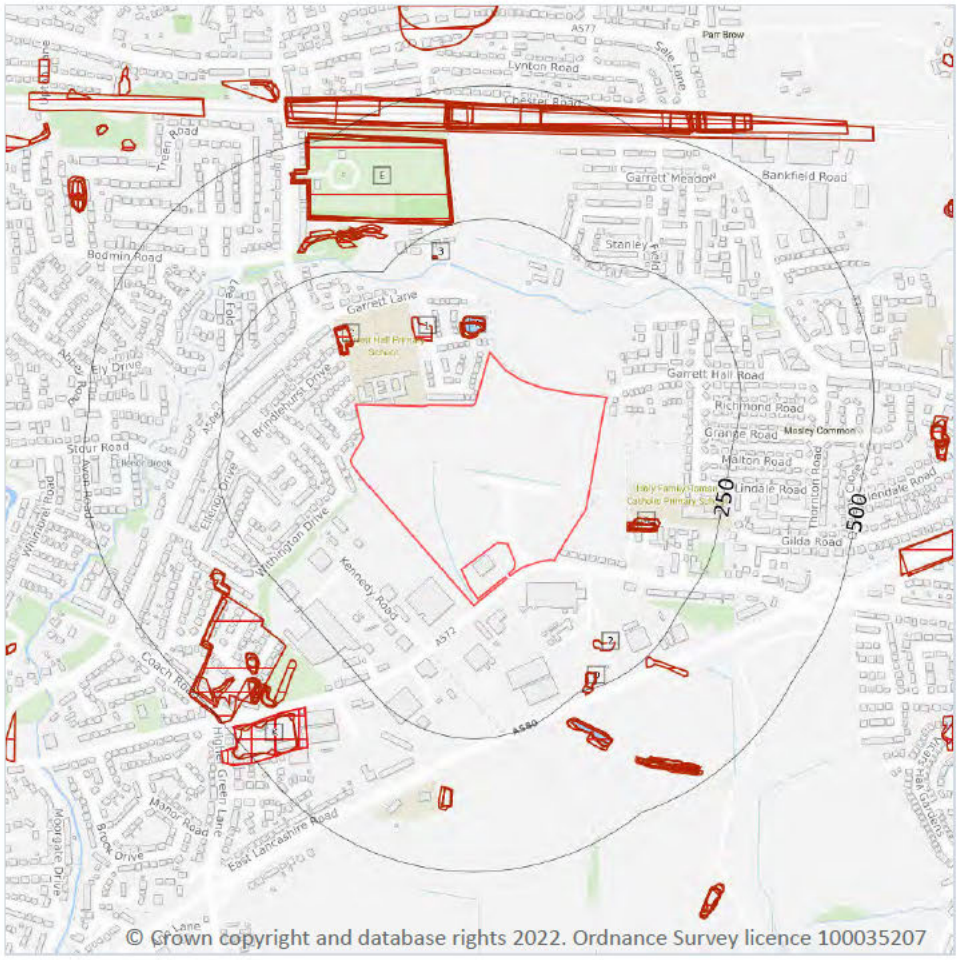
Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.6 Ground dissolution of soluble rocks

Records within 50m	1



The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on **page 105**

Location	Hazard rating	Details
On site	**Negligible**	**Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.**

This data is sourced from the British Geological Survey.

18 Mining, ground workings and natural cavities

18.1 Natural cavities

Records within 500m	0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Stantec UK Ltd.

18.2 BritPits

Records within 500m	0

BritPits (an abbreviation of British Pits) is a database maintained by the British Geological Survey of currently active and closed surface and underground mineral workings. Details of major mineral handling sites, such as wharfs and rail depots are also held in the database.

This data is sourced from the British Geological Survey.

18.3 Surface ground workings

Records within 250m	37

Historical land uses identified from Ordnance Survey mapping that involved ground excavation at the surface. These features may or may not have been subsequently backfilled.

Features are displayed on the Mining, ground workings and natural cavities map on **page 107**

ID	Location	Land Use	Year of mapping	Mapping scale

-	1000m E	Collieries	1904	1:10560

This is data is sourced from Ordnance Survey/Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m	0

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m	0

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

This data is sourced from the British Geological Survey.

18.7 Mining cavities

Records within 1000m	0

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

This data is sourced from Stantec UK Ltd.

18.8 JPB mining areas

Records on site	1

Areas which could be affected by former coal and other mining. This data includes some mine plans unavailable to the Coal Authority.

Location	Details
On site	**In addition to being located inside an area where The Coal Authority have information on coal mining activities, Johnson Poole & Bloomer (JPB) have information such as mining plans and maps held within their archive of mining activities that have occurred within 1km of this property which may supplement this information. Please note, the plans held by JPB may also relate to non-mining records. Further details and a quote for services (if appropriate) can be obtained by emailing this report to enquiries.gs@jpb.co.uk.**

This data is sourced from Johnson Poole and Bloomer.

18.9 Coal mining

Records on site	1

Areas which could be affected by past, current or future coal mining.

Location	Details
On site	**The site is located within a coal mining area as defined by the Coal Authority. A Consultants Coal Mining Report is recommended to further assess coal mining issues at the site. This can be ordered directly through Groundsure or your preferred search provider.**

This data is sourced from the Coal Authority.

18.10 Brine areas

Records on site	0

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.11 Gypsum areas

Records on site	0

Generalised areas that may be affected by gypsum extraction.

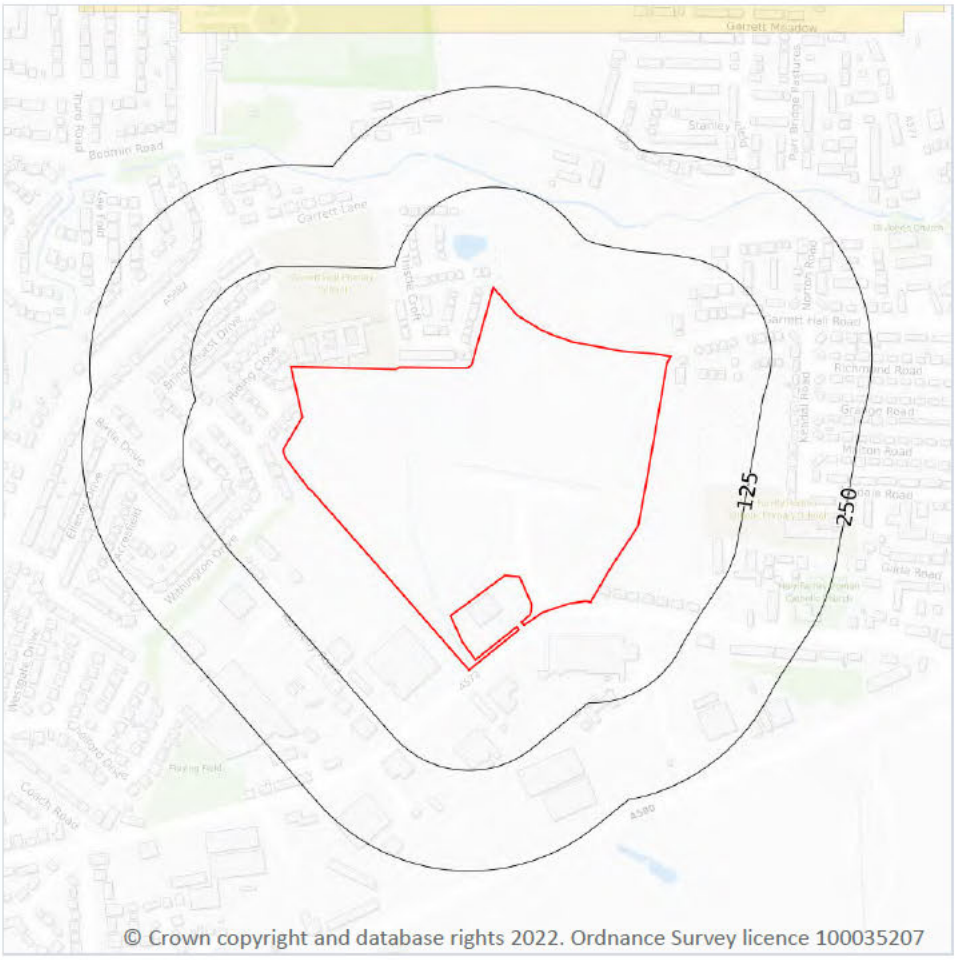
This data is sourced from British Gypsum.

18.12 Tin mining

Records on site	0

Generalised areas that may be affected by historical tin mining.

This data is sourced from Groundsure.



18.13 Clay mining

Records on site	0

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Radon

Site Outline

Search buffers in metres (m)

- Greater than 30%
- Between 10% and 30%
- Between 5% and 10%
- Between 3% and 5%
- Between 1% and 3%
- Less than 1%

19.1 Radon

Records on site	1

Estimated percentage of dwellings exceeding the Radon Action Level. This data is the highest resolution radon dataset available for the UK and is produced to a 75m level of accuracy to allow for geological data accuracy and a 'residential property' buffer. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain. The data was derived from both geological assessments and long term measurements of radon in more than 479,000 households.

Features are displayed on the Radon map on **page 113**

Location	Estimated properties affected	Radon Protection Measures required
On site	**Less than 1%**	**None****

This data is sourced from the British Geological Survey and Public Health England.

20 Soil chemistry

20.1 BGS Estimated Background Soil Chemistry

Records within 50m	12

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km^2. In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km^2; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

Location	Arsenic	Bioaccessible Arsenic	Lead	Bioaccessible Lead	Cadmium	Chromium	Nickel
On site	**15 mg/kg**	**No data**	**600 - 1200 mg/kg**	**360 - 720 mg/kg**	**1.8 mg/kg**	**60 - 90 mg/kg**	**15 mg/kg**

This data is sourced from the British Geological Survey.

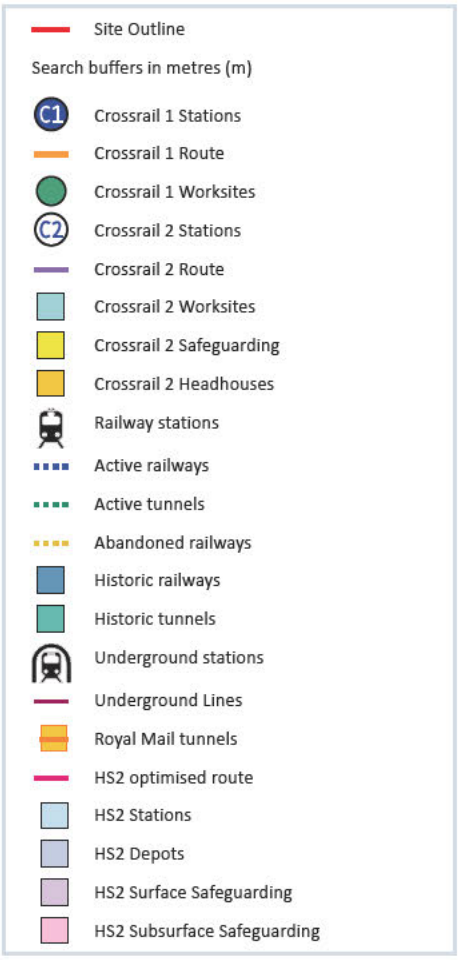
20.2 BGS Estimated Urban Soil Chemistry

Records within 50m	0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km^2).

This data is sourced from the British Geological Survey.

20.3 BGS Measured Urban Soil Chemistry



Records within 50m	0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km^2.

This data is sourced from the British Geological Survey.

21 Railway infrastructure and projects

21.1 Underground railways (London)

Records within 250m	0

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

21.2 Underground railways (Non-London)

Records within 250m	0

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

21.3 Railway tunnels

Records within 250m	0

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

21.4 Historical railway and tunnel features

Records within 250m	3

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

Features are displayed on the Railway infrastructure and projects map on **page 116**

Location	Land Use	Year of mapping	Mapping scale
126m SW	Railway Sidings	1904	10560
127m SW	Railway Sidings	1908	2500
129m SW	Tramway Sidings	1851	10560

This data is sourced from Ordnance Survey/Groundsure.

21.5 Royal Mail tunnels

Records within 250m	0

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

21.6 Historical railways

Records within 250m	0

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

This data is sourced from OpenStreetMap.

21.7 Railways

Records within 250m	0

Currently existing railway lines, including standard railways, narrow gauge, funicular, trams and light railways.

This data is sourced from Ordnance Survey and OpenStreetMap.

21.8 Crossrail 1

Records within 500m	0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

21.9 Crossrail 2

Records within 500m	0

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

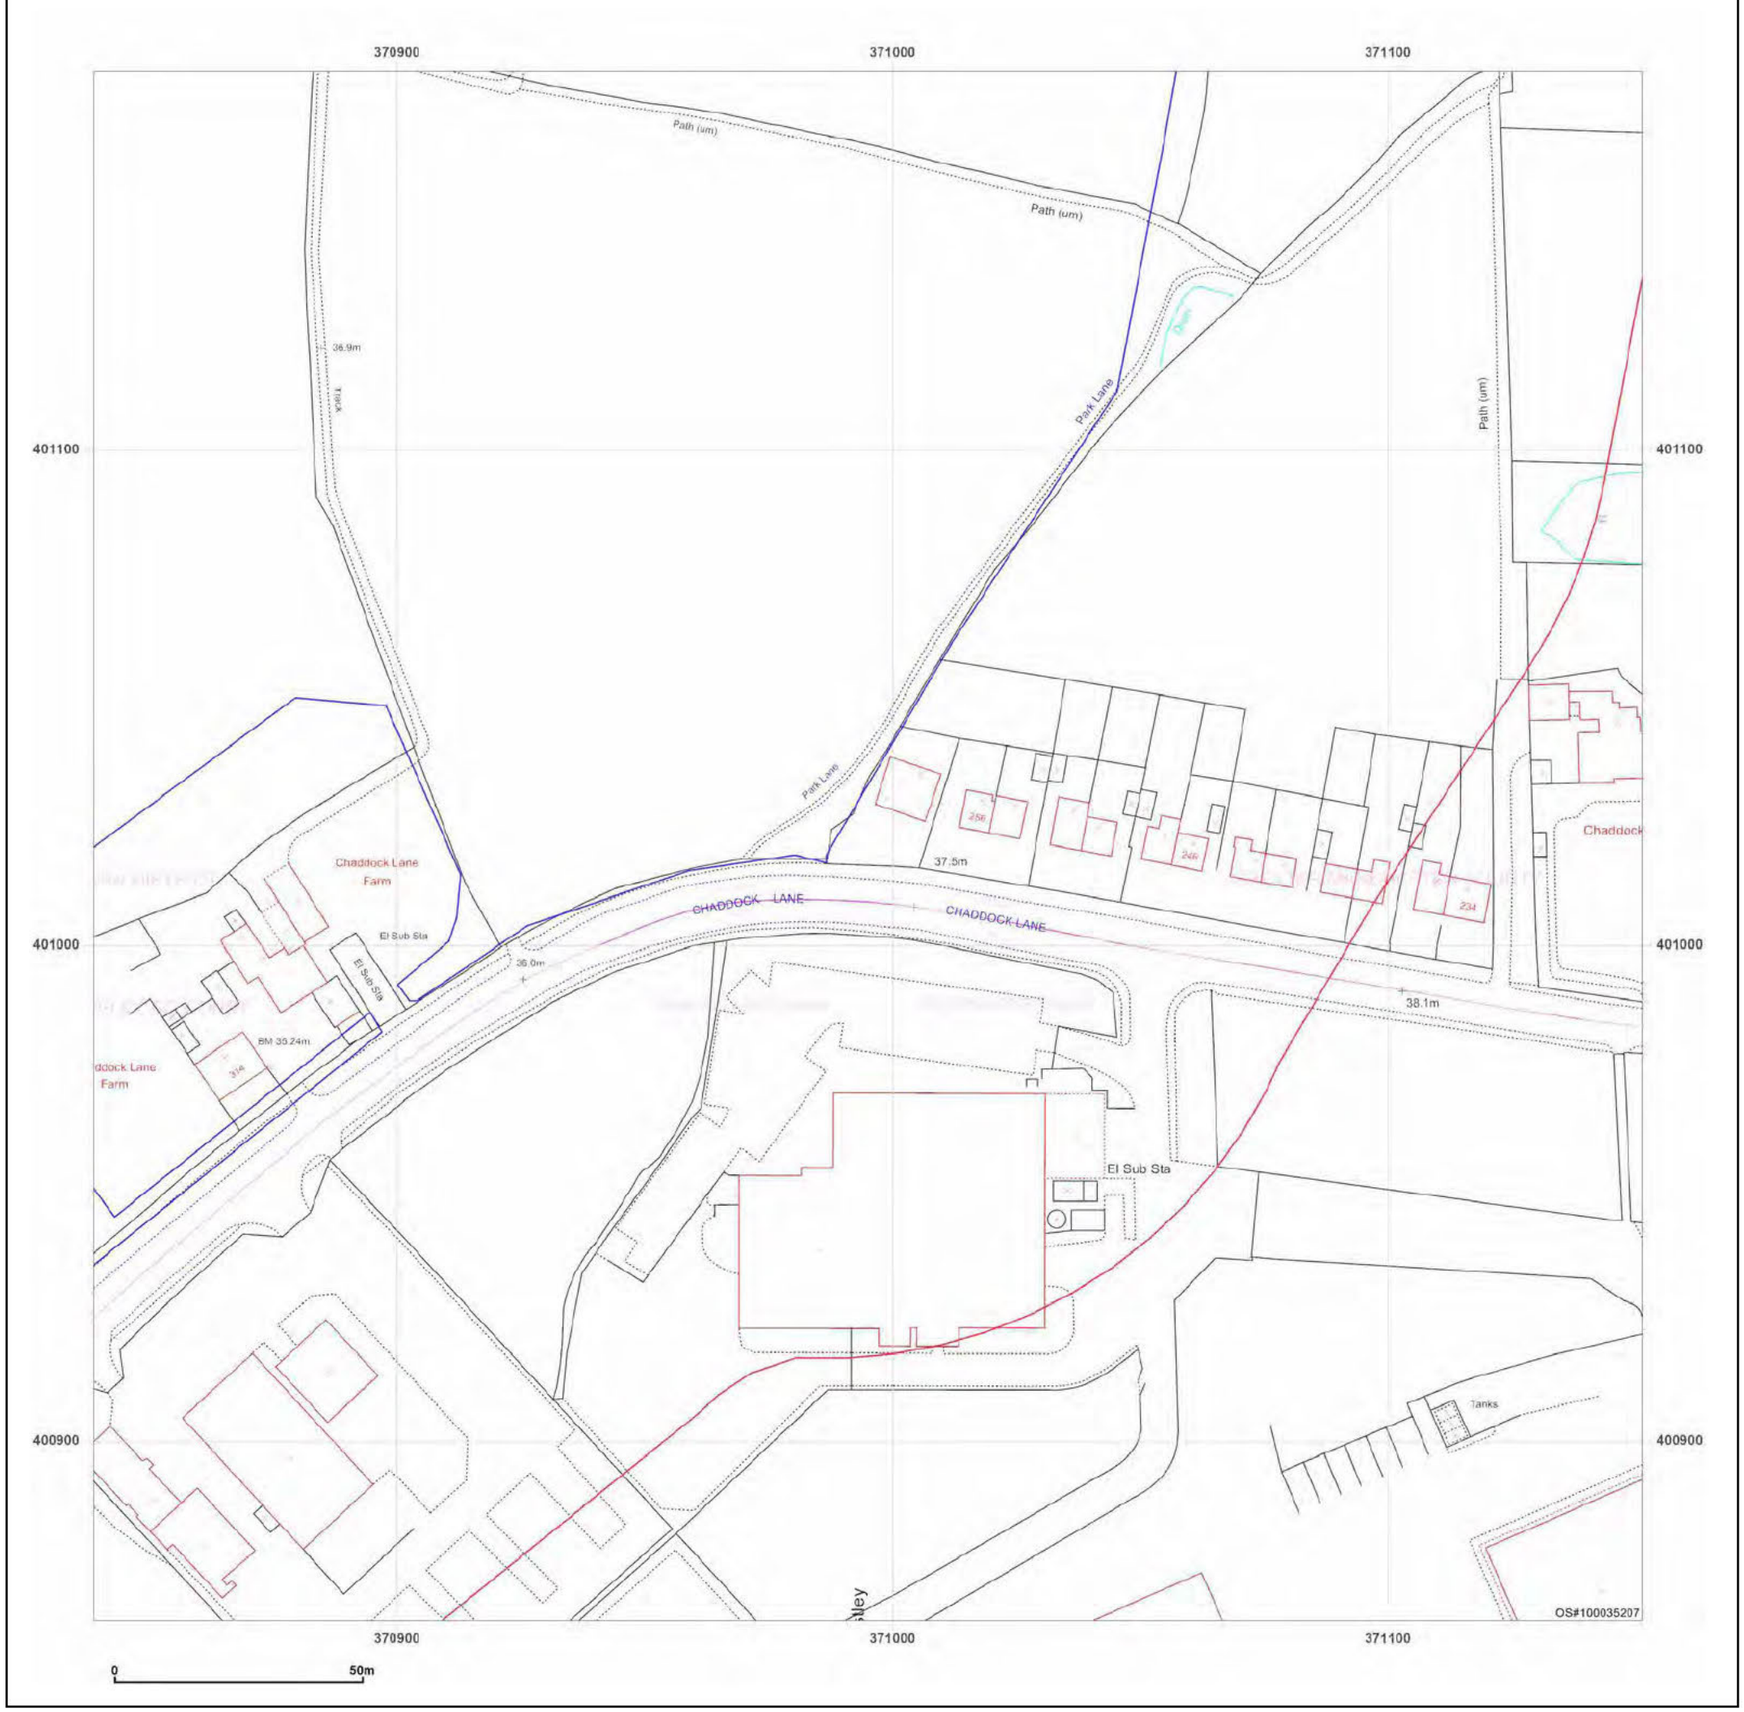
This data is sourced from publicly available information by Groundsure.

21.10 HS2

Records within 500m	0

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 ltd.



Data providers

Groundsure works with respected data providers to bring you the most relevant and accurate information. To find out who they are and their areas of expertise see https://www.groundsure.com/sources-reference.

Probable unrecorded shallow workings

Yes.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

Entry type	Reference	Grid reference	Treatment description	Mineral	Conveyancing details
Shaft	370401-003	370587 401161	This shaft was treated in 1973 to the then National Coal Board specification prior to the development of the estate.	Coal	
Shaft	370401-004	370583 401132	This shaft was treated in 1973 to the then NCB Specification	Coal	
Shaft	370401-005	370734 401045		Coal	
Shaft	370401-006	370862 401022		Coal	Peel Investments (North) Limited 18/12/2009
Shaft	370401-007	370981 401035	Located in August 2019 by trial trenching. Drilled and grouted in February 2020 and covered with a reinforced concrete cap.	Coal	
Shaft	370401-008	370583 401203	This shaft was treated in 1978 by H. Williams and Associates Consulting Civil and Structural Engineers. The existing fill material was consolidated from a depth of 6 metres below the surface to the bottom of the shaft. This was topped by 2.4 metres of hardcore a 1.5 metre thick concrete plug then 2 metres of hardcore to the surface	Coal	
Shaft	371401-001	371108 401059	Located in October 2018 by trial trenching. Drilled and grouted in February 2020 and covered with a reinforced concrete cap.	Coal	

Abandoned mine plan catalogue numbers

The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

NW438	NW192	NW624
2094	NW621	16698
13036	NW1123	NW626

Our records show we have more plans than those shown above which could affect the enquiry boundary.

Please contact us on 0345 762 6848 to determine the exact abandoned mine plans you require based on your needs.

Copyright © 2022 The Coal Authority

Outcrops

Seam name	Mineral	Seam workable	Distance to outcrop (m)	Direction to outcrop	Bearing of outcrop
WORSLEY FOUR FEET	Coal	Yes	Within	N/A	83
WORSLEY FOUR FEET	Coal	Yes	Within	N/A	84

Geological faults, fissures and breaklines

Please refer to the 'Summary of findings' map (on separate sheet) for details of any geological faults, fissures or breaklines either within or intersecting the enquiry boundary.

Faults under or close to the property recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Copyright © 2022 The Coal Authority

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

Distance to site investigation (m)	Direction
Within	N/A
6.5	East
0.9	East

See Section 4 for further information.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Copyright © 2022 The Coal Authority

Section 3 – Licensing and future mining activity

Future underground mining
None recorded.

Coal mining licensing
None recorded within 200 metres of the enquiry boundary.

Court orders
None recorded.

Section 46 notices
No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices
The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land
The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Copyright © 2022 The Coal Authority

Section 4 – Further information

The following potential risks have been identified and as part of your risk assessment should be investigated further.

Development advice

The site is within an area of historical coal mining activity. Should you require advice and/or support on understanding the mining legacy, its risks to your development or what next steps you need to take, please contact us.

Site investigations

The site is within an area of previous interest. It is close to where the Coal Authority has received information relating to past site investigations.

The site requires further investigation and may influence how you approach your risk assessment.

For further information on specific site or ground investigations in relation to any issues raised in Section 4, please call us on 0345 762 6848 or email us at groundstability@coal.gov.uk.

Copyright © 2022 The Coal Authority

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk.**

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Copyright © 2022 The Coal Authority

Opencast mines
Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips
Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations
Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites
Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence
Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas
Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission.

Copyright © 2022 The Coal Authority

Mine water treatment schemes
Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining
Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing
Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders
Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices
Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices
Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land
Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

APPENDIX G – UXO RISK ASSESSMENT

UNEXPLODED BOMB RISK MAP

zeticauxo

SITE LOCATION

Location: M28 1FJ,
Map Centre: 370855,401009

LEGEND

- **High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- **Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- **Low:** Areas indicated as having 15 bombs per 1000acre or less.

transport | **dock** | **Luftwaffe targets**
utilities | **Bombing decoy** | **other**

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: **(https://zeticauxo.com/downloads-and-resources/risk-maps/)**

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

1

INTRODUCTION

PUBLIC

1 INTRODUCTION

1.1.1. This Planning and Heritage Statement has been prepared by WSP on behalf of Astley Care Unit ("the Applicant"). The purpose of this Statement is to assist Wigan Metropolitan Borough Council ("the Council") in the consideration of a full planning application for a development at land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan ("the site").

1.1.2. The description of the proposed development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

1.1.3. The site benefits from an allocation as a Primary Employment Area (ref: EM1A) within the Wigan Local Plan (WLP).

1.1.4. The application seeks to provide modern warehouses for industrial and manufacturing purposes within an employment site long established for the development sought by virtue of its Local Plan allocation that takes into account site constraints and as far as possible to mirror the development parameters approved under the outline planning permission (ref: A/15/81365/OUTMAJ).

1.1.5. This Statement sets out why planning permission should be granted for a major development that will deliver a high-quality logistics and warehousing scheme to accommodate flexible B2/B8 uses with ancillary office spaces, service yards, landscaping and cycle and parking areas to meet the current and changing needs of potential occupiers on this allocated Primary Employment Area within the Local Plan. The scheme, if approved, will deliver substantial socio-economic benefits to the area and Wigan Borough, including the creation of significant levels of employment.

1.2 THE APPLICANT

1.2.1. Astley Unit Trust is a subsidiary of PLP, a specialist UK logistics and industrial property business, founded in 2015. The full service platform sources, develops and manages prime UK logistics real estate on behalf of institutional capital partners, with in-house management expertise across all key capabilities including acquisitions, planning and development, leasing and asset/investment management. PLP's core business strategy is to develop prime, large scale logistics assets and add value throughout their investment life cycle.

1.2.2. The PLP platform is owned by Ivanhoé Cambridge, Peel L&P, Macquarie Asset Management, and its senior management team.

1.2.3. PLP currently manages two develop to core ventures, UK Logistics Venture (UKLV) 1 & 2. UKLV1's £500m of equity is fully committed, with 10m sq ft of prime logistics space either completed or under development, while UKLV2's £750 million of allocated capital is currently being deployed. On a completed basis AUM from these ventures is expected to reach approximately £2.5bn.

1.3 STRUCTURE OF THIS STATEMENT

1.3.1. This Statement is structured as follows:

- Section 2 sets out the site context and the planning history associated with the application site;

- Section 3 outlines the proposed development;
- Section 4 provides a Statement of Community Engagement, setting out details of the public engagement undertaken to date;
- Section 5 sets out the relevant planning policies at a local and national level;
- Section 6 provides the reasons why planning permission should be granted and
- Section 7 provides a Heritage Statement assessing the impacts of the proposals on nearby listed buildings and heritage assets;
- Section 8 sets out suggested S106 Heads of Terms; and
- Section 9 provides the conclusions and the overall planning balance.

2 SITE CONTEXT

2.1.1. The site is greenfield land allocated as a Primary Employment Area in the WLP and is located within the area known as Astley Business Park within the Borough of Wigan, situated towards the eastern part of the Borough. The site is also located to the north of the East Lancashire Road (A580).

2.1.2. The site (as identified in **Figure 2-1** below) is an irregularly shaped parcel of land. The site largely comprises approx. 12.71ha of land primarily used as agricultural fields used for grazing, separated by hedgerows and a number of trees. A Site Location Plan can be found at **Appendix A**.

Figure 2-1 - Site Location Boundary, Astley (Google Earth, 2023).

2.1.3. The site broadly falls from northeast to southwest with levels ranging between c.47m AOD and c.38m AOD across the site.

2.1.4. There are areas of more dense vegetation in the south-west of the site. The site also features a partly constructed internal access road present in the centre of the site as enabling works to serve future development.

2.1.5. A small ditch network passes through the centre of the site, falling in a south westerly direction, before outfalling into a culvert. This ditch network runs parallel to a public footpath running in an east-west direction through the centre of the site, with a perpendicular branch connecting the footpath the roads to the north (Garrett Lane) and south (Chaddock Lane). Attenuation basis are present within the south-western part of the site and to the east of the site access road.

2.1.6. The northern boundary of the site is demarcated by Garrett Lane which extends east to west. On the northern side of Garrett Lane, there is outline planning permission for residential development for up to 600 dwellings (ref: A/13/77906 MAJ OUTLINE) which is currently under construction.

2.1.7. Directly towards the south of the site, adjacent to the boundary is the Applewood Farm public house which benefits from access from the internal access road (Astley Park Way) which leads onto

Chaddock Lane. Towards the south and south-western boundary and beyond are existing established industrial and warehouse uses. As such, the surrounding land uses are of predominantly mixed industrial and residential in nature with a leisure use (the public house) to the south-west and Garrett Primary school located towards the north-western boundary.

2.2 PLANNING DESIGNATIONS

2.2.1. The site is allocated for B1, B2 and B8 uses under Policy EM1A 'Primary Employment Areas' within the saved policies of the Wigan Replacement Unitary Development Plan (2006).

2.2.2. The local plan policies map is shown in **Figure 2-2** below, with the extent of the employment allocation shown in light purple.

2.2.3. The entire site is located within Flood zone 1.

2.2.4. The site is not within a conservation area and does not contain any listed buildings.

Figure 2-2 - Extract from online proposals map (Wigan.gov.uk, 2023)

2.3 PLANNING HISTORY

2.3.1. In terms of the site's planning history, **Table 2-1** below outlines the most relevant planning applications undertaken using the Council's planning portal, however it should be noted that the site has an extensive planning history extending back over 20 years.

2.3.2. The most pertinent planning history to this application is the permission for major mixed employment and residential development which was granted in 2017 (ref: A/15/81365/OUTMAJ). The residential elements of this consent have been implemented following approval of reserved matters (refs: A/17/83910/RMMAJ and A/19/87155/RMMAJ), however the employment element of the outline consent was not implemented within the required timeframe and has thus expired.

Table 2-1 – Relevant Planning History

Planning Reference	Description	Decision Date	Status
A/15/81365/OUTMAJ	Outline application for a mixed use development comprising up to 28,000 SQM of employment floor space (use classes B1, B2 and B8), up to 165 dwellings, land for community use, open space, landscaping and association infrastructure (all matters reserved except employment access from Chaddock Lane; residential access from Garrett Hall Road and Garrett Lane)	27 February 2017	Approved
A/12/76732	Application to extend time limit for implementation of planning permission A/08/72144 - To vary condition 2 of planning approval A/06/67659 to accord with revised master plan and site access arrangement to outline application for an employment park comprising up to 31,500 square metres of class B1, B2 and B8 uses (All matters reserved except access).	13 December 2012	Approved

3 STATEMENT OF COMMUNITY INVOLVEMENT

3.1 LEGISLATION AND POLICY

3.1.1. The importance of pre-application consultation and community engagement are emphasised in the following:

- Community Involvement in Planning: The Government's Objectives (2004);
- Localism Act (2011);
- National Planning Policy Framework (NPPF) (2023); and
- Wigan Council's Statement of Community Involvement (SCI) (2021).

3.1.2. Wigan's Statement of Community Involvement was adopted in July 2021. It sets out what the Councils are required to produce that sets out what consultation will take place with the community on Planning Policy documents and planning applications. The SCI states who the Council will consult with, when and how.

3.1.3. The SCI encourages applicants, developers and agents to consider '*involving the Community prior to planning application submission', emphasising that 'pre-submission consultation can offer many benefits*'.

3.1.4. Furthermore, the SCI recommends that such consultations should take place as early as possible in the design of the scheme, with developers expected to provide evidence of pre-application consultation thereafter.

3.2 CONSULTATION APPROACH

3.2.1. In accordance with Wigan's Statement of Community Involvement, the applicant has engaged with key stakeholders such as local residents and local Ward Councillors and has carried out a formal community engagement exercise.

3.2.2. The following consultation methods have been implemented for the proposals:

- Letters issued to local Ward Councillors for Tyldesley and Mosley Common ward (where the site is located) and Ward Members for Astley ward (as the site is adjacent to the ward boundary) including a site plan inviting them to a meeting should they wish to discuss the scheme in more detail;
- A letter drop (via Royal Mail) to residential addresses nearest to the site including neighbouring businesses (the letter can be found at **Appendix C**).

3.2.3. Comments were invited on the planning application proposal. The consultation was designed to allow the local community to view the proposals and share their feedback with the design team.

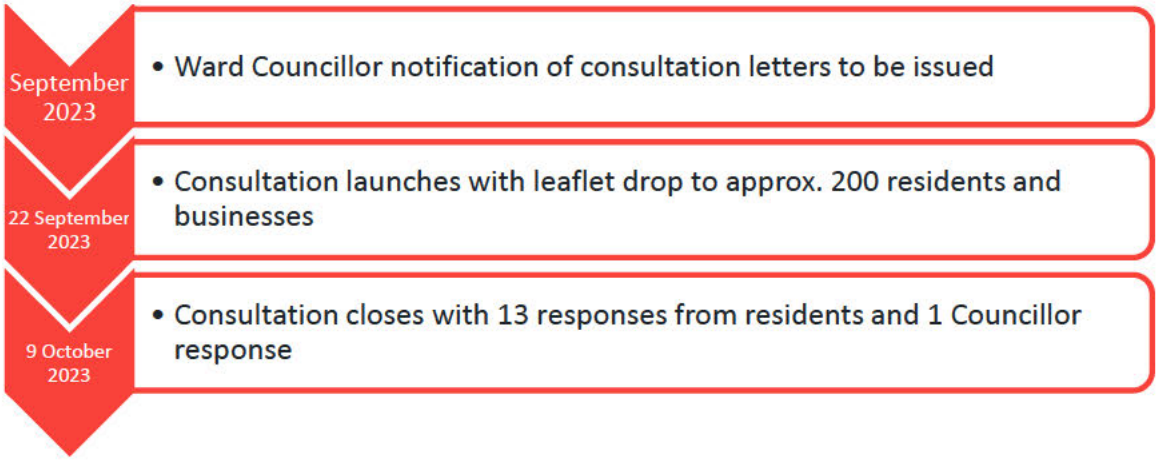
3.3 COUNCILLOR ENGAGEMENT

3.3.1. In September 2023, all Councillors representing Astley and Tyldesley and Mosley Common wards were consulted via email and provided with a copy of the proposed site plan.

3.3.2. Councillors were contacted in advance of a wider consultation with the local community commencing.

3.3.3. The correspondence offered the opportunity for a virtual meeting to be organised where members of the team would be on hand to explain the proposals in greater detail and also answer any questions.

3.4 CONSULTATION WITH THE LOCAL COMMUNITY



3.4.1. The consultation process for this application was designed to allow the local community to view the draft proposals and share their feedback with the team before the scheme is finalised and the application is submitted.

3.4.2. As a result, a letter, which provided details of the proposals was distributed to approximately 200 properties across the distribution area shown on **Figure 3-**1. Letters were posted on 22 September 2023 and contained an email address and phone line, presenting draft plans and further details of the scheme proposals. This approach and the distribution area was agreed in advance with planning officers at WMBC.

Figure 3-1 - Extent of properties consulted (Source: Google Maps)

3.5 TIMELINE OF KEY EVENTS

3.6 SUMMARY OF FEEDBACK RECEIVED

3.6.1. From the feedback received to the consultation exercise it was clear that impact on residential amenity and highways impact were key themes and the feedback received has helped influence the proposals.

3.6.2. Some specific comments are detailed below:

'There is wildlife living within the fields, we have recently seen owls flying around and there are numerous bird species too which nest in the bushes around the fields.

I am aware of the landscaping proposals however it will take years for this to develop to provide screening and noise barriers to the neighbouring residential properties.'

3.6.3. Other isolated comments related to the following:

- Potential impact on local highways network
- Loss of green space
- Impact on noise and amenity
- Impact on property value

3.6.4. The planning, design and technical assessment documents forming part of the application provide a robust assessment of the proposed development of all material technical consideration, in particular the impact of the scheme on residential amenity (discussed in detail in this Planning Statement) and in terms of highways impact (discussed in detail in the Transport Assessment)

3.7 ADDRESSING THE FEEDBACK

3.7.1. The following section outlines the response the design team have provided as a result of comments made during the consultation.

PUBLIC COMMENTS

Table 3-1 - Key issues received from the public

Consultation Response	Design Team Response
Impact of operations on amenity and noise	Some responses raised the issue that the future employment uses could impact upon local amenity in noise terms. A noise impact assessment has been undertaken and includes baseline surveys of existing noise conditions, an assessment of the potential impacts and mitigation requirements to accord with best practice, guidance and relevant regulations. Noise levels from activity during both the day time and night time will be kept within acceptable limits due to the proposed landscaped bunds (which act as a noise barrier in their own right) and the fact that all service yards are facing internally (rather than externally towards the site boundaries), plus a range of site management measures that would be adopted once the development is operational.
Design, height and massing of the buildings	Some concerns were raised about the design and appearance of the buildings, specifically the heights of units 1 and 2 particularly compared with other developments built locally. Due to the sensitive design of the proposed building facades, choice of elevational materials and the hipped roof line it will lessen the visual impact. To lessen visual impact further, in addition to the sensitive design methods adopted in the building design, landscaping around the perimeter of the site is to be bolstered by native planting atop earth mounding to aid screening of the development. Landscaped areas are proposed across the site with landscaping features such as 3-4m high bund running mainly across the northern boundary and a 3m high land mound on the eastern boundary. A further section of bunding is provided to the west of the site, providing screening to the residential properties. The width of the landscaped bund to the west of the site will be approximately 25m.
Highways impacts	Some concerns were raised about impact on local highways network. A Transport Assessment and Travel Plan have been prepared for this proposal which looks at the highway network. The assessment has been undertaken using standard appraisal methods. The assessment shows that the scheme is located in an accessible position with good opportunities for access by sustainable modes (including walking, cycling and public transport). The assessment also shows that the proposal will not generate a significant level of traffic and will not have a material impact on highway operation or road safety. The Transport Assessment shows that the proposal meets both local and national policy requirements and will assist Wigan Council to meet its wider ambitions to reduce carbon generated by developments.

3.8 SUMMARY

3.8.1. In accordance with the Wigan's Statement of Community Involvement, this statement provides a chronology of the pre-application consultation that has been undertaken with the local community to assist in the shaping of this proposal.

3.8.2. The consultation indicated areas of concern for local residents, however, the consultation event has provided an opportunity to address local resident's concerns and direct them towards the planning application submission documents for further details.

3.8.3. In light of the above, the consultation approach for the proposal is in accordance with the Council's adopted SCI guidance, Localism Act and NPPF.

4 PROPOSED DEVELOPMENT

4.1 OVERVIEW

4.1.1. The description of development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

4.1.2. Full planning permission is sought for up to 32,826 sqm (GIA) (c. 353,336 sqft) split across four warehousing units, each with ancillary floorsapce. The different warehouses will range in size and will be flexible in order to offer B2/B8 use with some ancillary office and reception areas.

4.1.3. The Proposed Site Plan can be found at **Appendix B** with full details of the proposed design and access arrangements contained within the supporting Design and Access Statement.

4.2 LAYOUT, SCALE AND MASSING

4.2.1. The proposals comprise four new warehousing/logistics buildings (referred to on the plans as 'Units 1-4') with contemporary ancillary office facilities to support the primary function of the units.

4.2.2. The buildings have been carefully positioned as far as practicable within the central part of the site, mindful of proposed landscaping corridors and away from the site boundary to offer space strong landscape buffers, as well as acoustic and visual barriers. The units are also 'internally facing' to ensure that service yards are all situated towards the centre of the site to provide further acoustic and visual mitigation.

4.2.3. The proposed development includes ancillary structures and enclosures such as security gatehouses to Units 1 and 2 and sprinkler pump house and tanks. Transformers and substations are also included within the designs which will feature GRP enclosures to soften their appearance and fencing to prevent unauthorised access.

4.2.4. The proposed layout has been worked up in detail in accordance with the Applicant's commercial requirements to provide modern, flexible and fit-for-purpose employment units with sufficient outdoor yard spaces, servicing and parking areas. The layout and proposed siting of the buildings provides a commercially attractive layout whilst ensuring that the site constraints have been appropriately considered.

4.2.5. The scale and massing of the buildings have been optimised in order to provide the most efficient layout. The scale and massing of the proposed development has been influenced by the site's surrounding context. The architect has sought to achieve this through using different materials to break down different elements of the building to soften the appearance and to better respond to the neighbouring uses.

4.2.6. The buildings will have a maximum height of 18.35m to the ridge and will not be overbearing within their context. The proposed size and height of the units is based on assessed current and future market needs and allows sufficient internal clearance for future occupiers.

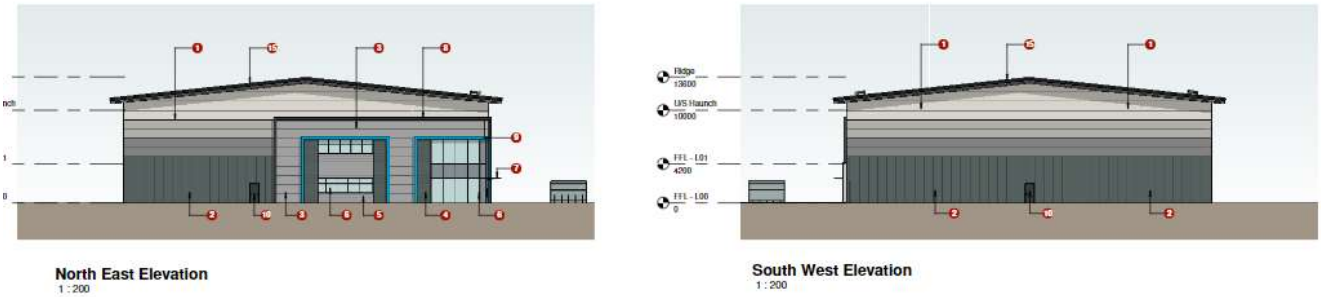


Figure 4-1 - Proposed Site Masterplan

4.3 APPEARANCE

4.3.1. The proposals reflect contemporary design principles in creating a high-quality B2/B8 buildings. The elevational treatment of the buildings provides a robust yet high-quality design utilising a contrasting colour palette to break down the elevations and soften the appearance of the buildings.

Figure 4-2 - Elevational drawings of proposed Unit 4

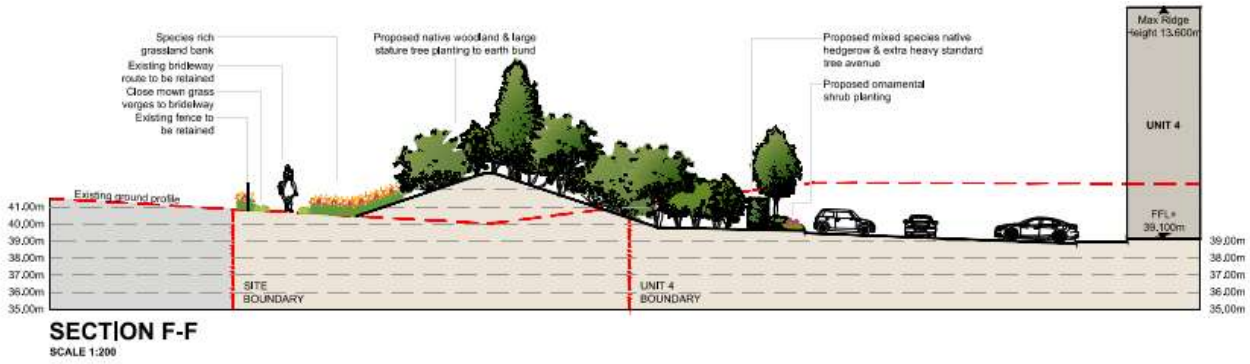
4.3.2. The majority of buildings will be clad in gradated horizontal trapezoidal profiled cladding finished in grey. The façade of the units will be broken up with profiled cladding.

4.3.3. The areas above the loading doors will feature darker grey smooth wall panels. Finishes have been chosen for their durability and colour fastness.

4.3.4. High speed roller shutters will be insulated composite panel and are featured in every single unit. Elevations are further broken up by PPC framed glazed entrance doors and windows for the potential reception parts of the units.

4.3.5. The appearance, materials and colours have been proposed to minimise the impact of the buildings from a visual perspective. The chosen colour palette of grey will be utilised to provide contrast to the cladding and ensure that the design is sympathetic to its surroundings.

4.4 LANDSCAPING



4.4.1. Significant areas of landscaping are proposed along all site boundaries.

4.4.2. As part of the proposals, a comprehensive landscape strategy has been prepared. Landscape areas are proposed across the site with landscaping features such as 3-4m high bund running mainly across the northern boundary and a 3m high land mound on the eastern boundary. A further section of bunding is provided to the west of the site, providing screening to the residential properties.

4.4.3. The landscaping proposals feature the planting of over 310 trees of multiple types and includes the planting of hedgerows, wildflower and amenity and translocated grassland.

4.4.4. Where bunds are proposed, as illustrated in the landscape section at **Figure 3-1** below, these will comprise a combination of landscaped mounds with planting atop to ensure an effective and durable visual barrier is provided to the north, east and west boundaries.

Figure 4-3 - Example of landscaped bund section

4.4.5. New areas of hedges, trees and low planting are proposed within the centre of the site and a tree-lined boulevard provides an attractive setting for the employment park.

4.4.6. The two attenuation ponds towards the southern boundary will be retained as part of the landscaping and drainage strategy and supplemented by a swale and bioretention zone on the western and northern boundary spanning in a north/south and west/east direction.

4.4.7. New areas of hedges, trees and low planting are proposed within the centre of the site and a treelined boulevard also forms part of the proposals.

4.4.8. As the landscape develops and matures it will help to assimilate the proposed development into its immediate site and surroundings, providing a high level of screening.

4.5 FOOTPATH DIVERSIONS

4.5.1. PROW Tyldesley No. 161 that runs along Tanhouse Avenue, is located to the west of the site. This footpath meets Tyldesley No. 159 which runs east-west across the site, before heading north, to its junction with Tyldesley No 161 and continues as Tyldesley No. 160 up to Garrett Lane.

4.5.2. The proposals include the provision of a section of footpath running along the back of houses on Westminster Drive and Tanhouse Avenue. This particular section is only a permissive path and therefore is not part of the wider PRoW diversion/improvement scheme. This section of footpath is not something that the applicant is obliged to deliver due to any rights or otherwise of the neighbours, however the applicant is willing to provide this additional section of footpath (with permissive rights) in the interests of being a good neighbour.

4.5.3. Footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 will be permanently diverted as part of the proposals with stopping up orders due to be submitted separately. Please see drawings no. 21714-HYD-XX-XX-SK-D-0001, 21714-HYD-XX-XX-SK-D-0002 and 21714-HYD-XX-XX-SK-D-0003 showing the extent of existing PRoW passing through the site.

4.6 ACCESS, CIRCULATION AND PARKING

4.6.1. In addition to the footpath diversions and improvements to the site permeability set out above, vehicular access to the site will be from Astley Park Way via Chaddock Lane.

4.6.2. The proposed development has carefully taken into account vehicle circulation within the site by clearly defining the internal service roads. Pedestrian and cycle access will be taken from the same proposed access road as the vehicular entry point, off Astley Park Way via Chaddock Lane.

4.6.3. Specific provision has been made for cyclists through the provision of safe, secure cycle storage in an easily visible and accessible.

4.6.4. In terms of parking provision, the proposal includes 327 car parking spaces (including provision of 17 disabled bays and 35 bays with Electric Vehicle Charging provision) and 73 HGV parking bays.

4.6.5. In addition to the above, 140 cycle parking spaces will be provided.

4.7 PRE-APPLICATION ADVICE

4.7.1. Given the prominence of the site and the potential scale of development, the applicants have, undertaken extensive pre-application discussions with Wigan Council across a period of around 12 months. Formal pre-application meetings have been held (via video conference) with [redacted] and [redacted] at the Council. These meetings were attended by members of the project team, including the applicant, architect and planning consultant.

4.7.2. The key discussion points at the meetings included:

- Master-planning of the site;
- Relationships between the application site and the surrounding residential development
- Height, massing and architecture;
- Landscape;

- Footpath diversions and upgrades;
- Public consultation and stakeholder engagement; and
- Technical constraints including noise, air quality and levels and ground contamination.

4.7.3. There is clear officer support for the development of the site for employment use as in doing so it will help realise the Council's long-held aspiration for this Primary Employment Area. The feedback received has been valuable and has positively shaped the current scheme which fit with the ambitions of Wigan's Core Strategy Local Plan and Unitary Development Plan.

5 PLANNING POLICY

5.1.1. Section 38(6) of the Planning and Compulsory Purchase Act 2004 states that applications for planning permission must be determined in accordance with the development plan, unless material considerations indicate otherwise.

5.1.2. The adopted Development Plan for Wigan Borough Council mainly comprises:

- The Wigan Core Strategy Local Plan (adopted September 2013); and
- Saved Policies Wigan Unitary Development Plan (adopted April 2006).

5.1.3. The National Planning Policy Framework (NPPF) (September 2023) is also a material consideration for development management purposes.

5.1.4. This chapter sets out the relevant planning policies and guidance contained within the NPPF and Local Plan Core Strategy. These are then appraised in subsequent chapters.

5.2 NATIONAL PLANNING POLICY FRAMEWORK

5.2.1. The National Planning Policy Framework (NPPF) was updated on 5 September 2023 and is a key material consideration in the determination of planning applications.

Achieving Sustainable Development

5.2.2. Sustainable Development means meeting the needs of the present without compromising the ability of future generations to meet their own needs (paragraph 8). The planning system has three overarching objectives in achieving sustainable development: economic, social and environmental.

5.2.3. Planning should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area (paragraph 9).

5.2.4. At the heart of the NPPF is the 'presumption in favour of sustainable development' ("the presumption") set out at paragraph 11, which establishes the planning principles in pursuing sustainable development in a positive way. Where there are no relevant development plan policies, or the policies which are most important for determining the application are out-of-date, permission should be granted unless 'any adverse impacts of doing so would significantly and demonstrably outweigh the benefits'. This includes where a local planning authority ('LPA') cannot demonstrate a five-year supply of deliverable housing sites or where the Housing Delivery Test has been failed and is referred to as the 'titled balance'.

Plan Making

5.2.5. Paragraph 23 states strategic policies should provide a clear strategy for bringing sufficient land forward, and at a sufficient rate, to address objectively assessed needs over the plan period, in line with the presumption.

Building a strong, competitive economy

5.2.6. Paragraph 81 encourages a strong, competitive economy where: "Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken

should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential."

Promoting Sustainable Transport

5.2.7. Paragraph 104 requires transport issues to be considered from the earliest stages of development proposals, so that the potential impacts on transport networks can be addressed; opportunities from existing or proposed transport infrastructure, technology and usage are realised; opportunities to promote walking, cycling and public transport use are identified and pursued; the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account; and patterns of movement, streets, parking and other transport considerations are integral to the design of schemes and contribute to making high quality places.

5.2.8. Paragraph 111 makes clear that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.

Making effective use of land

5.2.9. Paragraph 119 states development decisions should give substantial weight to the value of using suitable brownfield land for identified needs, and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land.

Achieving Well Designed Places

5.2.10. Paragraph 126 stresses the importance of planning positively for 'the creation of high-quality buildings and places.

5.2.11. Paragraph 128 ensures that developments will function well and add to the quality of the area; are visually attractive as a result of good architecture, layout and appropriate and effective landscaping; are sympathetic to local character and history, including the surrounding built environment and landscape setting; establish or maintain a strong sense of place; accommodate and sustain an appropriate amount and mix of development including greenspace and support local facilities and transport networks; and create places that are safe, inclusive and accessible and which promote health and wellbeing.

5.3 LOCAL DEVELOPMENT PLAN

5.3.1. The adopted Development Plan for the Borough comprises the Wigan Local Plan Core Strategy (2013) and the Saved Policies of the Wigan Unitary Development Plan (adopted April 2006).

WIGAN LOCAL PLAN CORE STRATEGY (2013)

5.3.2. **Policy SD1** sets out Wigan Council's position when it comes to and states that reflects the principles in the NPPF relating to the presumption in favour of sustainable development and those applications that accord with the development plan shall be approved without delay, unless material considerations indicate otherwise.

5.3.3. **Policy SP1 and SP2** states that development will be directed primarily to the east-west core of the borough, notably settlements such as Astley. Astley would be the focus amongst other settlements for development within the east of Wigan borough.

5.3.4. **Policy CP 5** states that the council will help to create sustainable economic growth by bringing forward a range of employment sites of the right quality in terms of location and supporting infrastructure to attract, maintain and grow businesses including but not limited to: manufacturing and engineering, logistics and digital information and communication technologies.

5.3.5. **Policy CP7** aims to ensure the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars, coaches and vans/lorries within new developments together with the promotion of the use of travel plans and appropriate provision of infrastructure for the charging of electric vehicles.

5.3.6. **Policy CP9** seeks access opportunities for walkers and cyclists; and measures that will reduce the extent of climate change or enable adaptation. It requires strategic landscaping on all new major development proposals, and seeks the protection of trees which are of value to amenity.

5.3.7. **Policy CP10** seeks to improve the built environment and make it a better place to live by ensuring that new development respects and acknowledges local character and identity; is integrated effectively with its surroundings; responds to climate change; is accessible for all and defines public/private spaces; incorporates high quality landscaping; reduces the risk of crime and anti-social behaviour; and has appropriate waste storage.

5.3.8. **Policy CP11** seeks to conserve and enhance the existing historic environment including the conservation and specific enhancement of heritage assets and their settings including listed buildings.

5.3.9. **Policy CP12** provides an emphasis on protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensure that as far as practicable, the habitats are part of linked networks and not fragmented. In addition, the policy requires the creation of wildlife habitats and features which are beneficial to geological conservation as part of new development.

5.3.10. **Policy CP13** aims to reduce the emission of carbon dioxide arising from new development with the aim to reduce impact of climate change on the environment, economy and quality of life.

5.3.11. It encourages all development to conform to the energy hierarchy by minimising the demand for energy before, maximising the efficiency of energy use before and implementing low-carbon dioxide and renewable energy technologies.

5.3.12. **Policy CP 16** states that development on greenfield sites should not increase the rate of surface water run-off with particular emphasis on ensuring that development in flood zones 2 and 3 and other areas vulnerable to surface water flooding should ensure that they follow a sequential approach in accordance with national planning policy.

5.3.13. **Policy CP17** seeks to help maintain, enhance and protect the existing environment for the benefit of the local population and wildlife by ensuring new development does not give rise to the pollution of any watercourse or groundwater.

WIGAN UNITARY DEVELOPMENT PLAN (ADOPTED APRIL 2006)

5.3.14. **Policy EM1A – Primary Employment Areas** allows development or changes of us to uses within Classes B1, B2 and B8 or other employment uses provided there would be no harm in terms of environmental, amenity, highway, road safety or other.

5.3.15. Astley Business Park at the time was referred to as Site EM1A 9 – Chaddock Lane and the proposed description was for mixed employment area with expansion land.

5.3.16. The policy also states that where all of this Primary Employment Area is to come forward, a masterplan or development brief is to be agreed with and approved by the Council.

5.3.17. **Table 4-1** below provides an appraisal of the proposed development in the context of the aforementioned development plan policies.

Table 4-1 – Wigan Replacement Unitary Development Plan and Local Plan policies

Policy	Analysis
Wigan Replacement Unitary Development Plan 2006	
EM1A Primary Employment Areas Within the Primary Employment Areas, development for, or changes of use to, uses within Classes B1, B2 and B8 or other employment uses will be permitted provided that there will be no unacceptable environmental, amenity, highway, road safety or other adverse impact. Other uses will only be permitted when:- (a) They will be small scale and complementary to the primary employment function of the Area or part thereof; or (b) They are on the fringe of the Primary Employment Area and it can be demonstrated that it will improve the physical relationship between the employment uses and adjacent uses, and it will not result in any greater constraint on the development and use of the remaining Employment Area for employment uses. Where all, or a substantial part of a Primary Employment Area is proposed for development or it is substantially undeveloped, a masterplan or development brief shall be agreed with, and approved by, the Council. Development shall accord substantially with the approved masterplan.	The proposed development seeks permission for mixed B2 and B8 development on the Astley Business Park allocation. The application is submitted with a detailed masterplan for the whole site showing proposed sitting of the employment units. The proposed development therefore clearly accords with Saved Policy EM1A and accordingly the principle of development is acceptable.
Wigan Local Plan Core Strategy, September 2013	
Policy SP1 In the east of the borough development will be focused on Leigh, Atherton, Tyldesley and Astley, including their town centres, and at broad locations for new development east of Atherton and between Tyldesley, Astley and Mosley Common.	The development of the site would form the natural infill or missing jigsaw piece which complements the recently developed residential site to the north known as Garrett Hall which is allocated for up to 600 dwellings.

Policy CP5 Help create sustainable economic growth; boost our economic performance and profile; and provide a wider range of job opportunities, by: 1. Bringing forward a range of employment sites of the right quality in terms of location, accommodation provision and supporting infrastructure, to attract, maintain and grow businesses, especially within the east-west core of the borough. The range of sites will focus on providing opportunities for the following key employment sectors in particular *1. Manufacturing and engineering, including food and drink processing* *2. Logistics / distribution* *3. Digital information and communications technology* *4. Creative/digital/new media* *5. Financial and professional services* *6. Environmental technologies* *7. Construction sector businesses.* 2. Against the qualitative factors set out above, making provision for approximately 200 hectares (gross) of employment land between 2011 and 2026, including reviewing sites allocated previously and undeveloped. 3. Safeguarding existing employment sites and buildings that are capable of continuing to meet the needs of employment uses and for which there is likely to be sufficient demand. 3. Encouraging a suitable supply of small, cost-effective premises for new business start-ups, including managed 'incubator' accommodation.	The proposed development would deliver significant socio-economic benefits and assist in achieving the aspirations of the Local Plan to create new and diversified employment land use. Development of this site will also bring significant socio-economic benefits including the creation of temporary employment during the construction phase, full-time employment once operational and additional expenditure in the local economy once operational. In addition to the above, the development of the site coincides with planning policy by delivering an allocated employment site and therefore reduces the need for additional or non-allocated employment sites to be released.
Policy CP7 Improve accessibility to key destinations for people and goods and connect people to opportunities both within and outside the borough by: Ensuring the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars, coaches and vans / lorries, including as part of new development	The application is supported by comprehensive Transport Assessment (TA). The conclusions of the TA demonstrate that there will not be severe impacts on the road network as a consequence of the development. The proposed development, in particular the footpath diversion and improvement workswill improve the walking and cycling environment for both local residents and future employees of the site.

Promoting the use of travel plans and requiring them to be produced and implemented for appropriate development. Supporting the appropriate provision of infrastructure for the charging of electric vehicles.	
Policy CP9 Improve the natural environments and open spaces within and between our towns and other settlements - our strategic landscape and green infrastructure - for the benefit of people and wildlife, and help make the borough a better place to live and visit and for businesses to locate and thrive, by: Identifying appropriate green areas to store flood waters away from homes, businesses and community buildings. Incorporating measures that will help to reduce the extent of climate change and/or adapt to a changing climate. Requiring key strategic landscaping on all new major development proposals and incorporating new green infrastructure in larger areas of new development, to help secure regeneration and/or economic development. Protecting trees and woodlands of value to amenity.	A robust landscape strategy is included as part of the proposals. The scale and nature of the built development proposed and the existing surroundings of the site were important factors in the landscape design approach which features a scheme that respects the character of the adjoining local landscape, enhances the ecology of the site and provides a stimulating, coherent and well-structured landscape and resulting in a positive setting for the development. Ornamental species of planting are proposed around the building envelope, along key access routes and within prominent locations adjacent to pedestrian paths. The proposed landscape for the site has been designed primarily to provide screening of the commercial units, to improve local biodiversity and ultimately for the vegetation to successfully establish.
Policy CP10 Improve the built environment of the borough and help make it a better place to live, visit and for businesses to locate and thrive by ensuring that, as appropriate, new development: Respects and acknowledges the character and identity of the borough and its locality, in terms of the materials, siting, size, scale and details used. Is integrated effectively with its surroundings and helps to create attractive places. Meets established standards for design. Includes measures to minimise the impact of and adapt to climate change and conserve natural resources and meets established national standards for sustainability and national carbon reduction targets	The proposed layout has been worked up in detail in accordance with the Applicant's needs to provide modern, flexible and fit-for-purpose employment units with sufficient outdoor yard spaces, servicing and parking areas. The layout and proposed siting of the buildings provides a commercially attractive layout whilst ensuring that the site constraints have been appropriately considered. The scale and massing of the buildings have been optimised in order to provide the most efficient layout. The scale and massing of the proposed development has been influenced by the site's surrounding context. The architect has sought to achieve this through using different materials to break down different elements of the building to better respond to the neighbouring properties.

Incorporates high quality landscaping. Is designed and uses materials that facilitate easy maintenance. Is designed to reduce the risk of crime and anti-social behaviour. Can be well serviced, including making provision for waste storage and collection.	The proposals reflect contemporary design principles in creating a high-quality, flexibleB2/B8 buildings. The elevational treatment of the buildings provides a robust yet high-quality design utilising a contrasting colour palette to break down the elevations and soften the appearance of the buildings. The appearance, materials and colours have been proposed to minimise the impact of the buildings from a visual perspective. The chosen colour palette of grey will be utilised to provide contrast to the cladding and ensure that the design is sympathetic to its surroundings.
Policy CP11 Seeks to conserve and enhance the existing historic environment including the conservation and specific enhancement of heritage assets and their settings including listed buildings.	A Heritage Statement is included within Section 5 of this report and assesses the significance of nearby heritage assets and also assesses the impacts on the significance of these assets as a result of the proposed development. The assessment concludes that the proposal accords with Policy CP11 and will not result in any harm to the heritage assets in the vicinity of the site.
Policy CP12 Help wildlife to prosper and safeguard important geological features by: Protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensuring, as far as practicable, that habitats are part of linked networks and not fragmented. 6. Requiring reasonable provision to be made for wildlife habitats and features beneficial to geological conservation as part of new development. Taking account of the impact of climate change in the enhancement of existing and the creation of new wildlife habitats	No irreplaceable habitats will be lost. Appropriate and commensurate mitigation will be imposed in respect of protected species. Mitigation, in particular a Construction Environmental Management Plan, will protect retained ecological features and protected sites during construction.
Policy CP13 Reduce the emissions of carbon dioxide arising from new development and help reduce the impacts of climate change on our environment, economy and quality of life by:	The planning application is accompanied by a Energy Statement, which sets out how the proposed development is intended to be designed to aid carbon reduction and climate change resilience. The proposals include a number of measures which can have significant impacts in CO2

1. Encouraging all development, where relevant, to conform to the energy hierarchy by: 1. minimising the demand for energy, before 2. maximising the efficiency of energy use, before 3. implementing low-carbon dioxide and renewable energy technologies. 2. Encouraging those proposing residential development of 10 units or more and/or non-residential development of more than 700 square metres to produce and submit a carbon reduction strategy setting out how the development will incorporate or make provision for, subject to viability, decentralised, renewable or low carbon energy sources to reduce the carbon dioxide emissions of energy use by at least 15%. 3. Encouraging new development to be designed, orientated and constructed so that it can maximise energy efficiency, reduce reliance on fossil fuel energy and take advantage of opportunities for renewable or low carbon dioxide technologies. 4. Encouraging reasonable improvements to be made to the energy performance of the existing building when an extension or other change to a building is proposed	reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.
Policy CP 16 Reduce the risk of flooding from all sources, notably in our flood zones 3 and 2, our critical drainage areas, and other areas vulnerable to surface water flooding, including locations downstream by ensuring that development: 1. Follows a sequential approach in accordance with national planning policy. 2. Is supported by a detailed Flood Risk Assessment where appropriate. 3. Incorporates appropriate mitigation and/or management measures to achieve, where possible, a reduction in flood risk overall. Development on greenfield sites should not increase the rate of surface water run-off. On previously-developed land, a reduction of at least 30% will be sought, rising to a minimum of 50% in critical drainage areas.	The planning application is accompanied by a Flood Risk Assessment and Drainage Strategy. The proposed development will incorporate a comprehensive sustainable drainage system in accordance with policy, guidance and best practice.

Policy CP 17 Maintain, enhance and protect our environment for the benefit of people and wildlife, and make the borough a better place for people to live and businesses to locate and thrive, by: Tackling land contamination and land stability issues, primarily on sites affected by past industrial uses and coal mining activities, by promoting the appropriate re-use of sites, supporting the identification of contamination and stability issues and requiring appropriate remediation. Managing air quality, particularly in our Air Quality Management Areas, including by minimising the air pollution (and carbon dioxide emissions) likely to arise from new development. Ensuring that new development does not give rise to the pollution of any watercourse, groundwater or mossland or result in the transfer of contaminated run-off to surface water sewers. Ensuring that new development is planned and designed so that it does not have an unacceptable adverse impact on amenity and quality of life and/or that it will not itself be impacted upon in such a way by existing uses or activities in the area.	Subject to the adoption of the recommendations set out in the suite of ecology reports and a Construction Environmental Management Plan, which can be secured via planning condition, the proposal will not result in any adverse impacts on the receptors listed in the policy. As demonstrated in the Air Quality Assessment, Drainage Strategy and Phase 2 Site Investigation, the proposals will also not give rise to any adverse air quality, contamination or drainage issues subject to appropriate mitigation being implemented, which can be secured via planning condition. Finally, for the reasons given in response to Policies CP9 – CP13, the proposals will not result in any unacceptable adverse impact on amenity and quality of life for existing residents, uses or activities in the surrounding area.

6 HERITAGE STATEMENT

6.1 INTRODUCTION

6.1.1. The application site does not lie within a conservation area however there are some listed buildings within the vicinity. A heritage assessment has, therefore, been conducted which concludes that the development will be carried out in a sensitive manner which will not be detrimental to the heritage assets.

6.1.2. This assessment has been carried out in the context of relevant statutory duties under Section 66 (1) of the Planning (Listed Buildings and Conservation Areas) Act 1990. These sections of the 1990 Act respectively require that, in determining development applications, special regard is given to the desirability of preserving the fabric and setting of listed buildings. In undertaking their consideration of the development proposals, the Council is required to ensure that any finding of harm is given considerable importance and weight in the decision-making process.

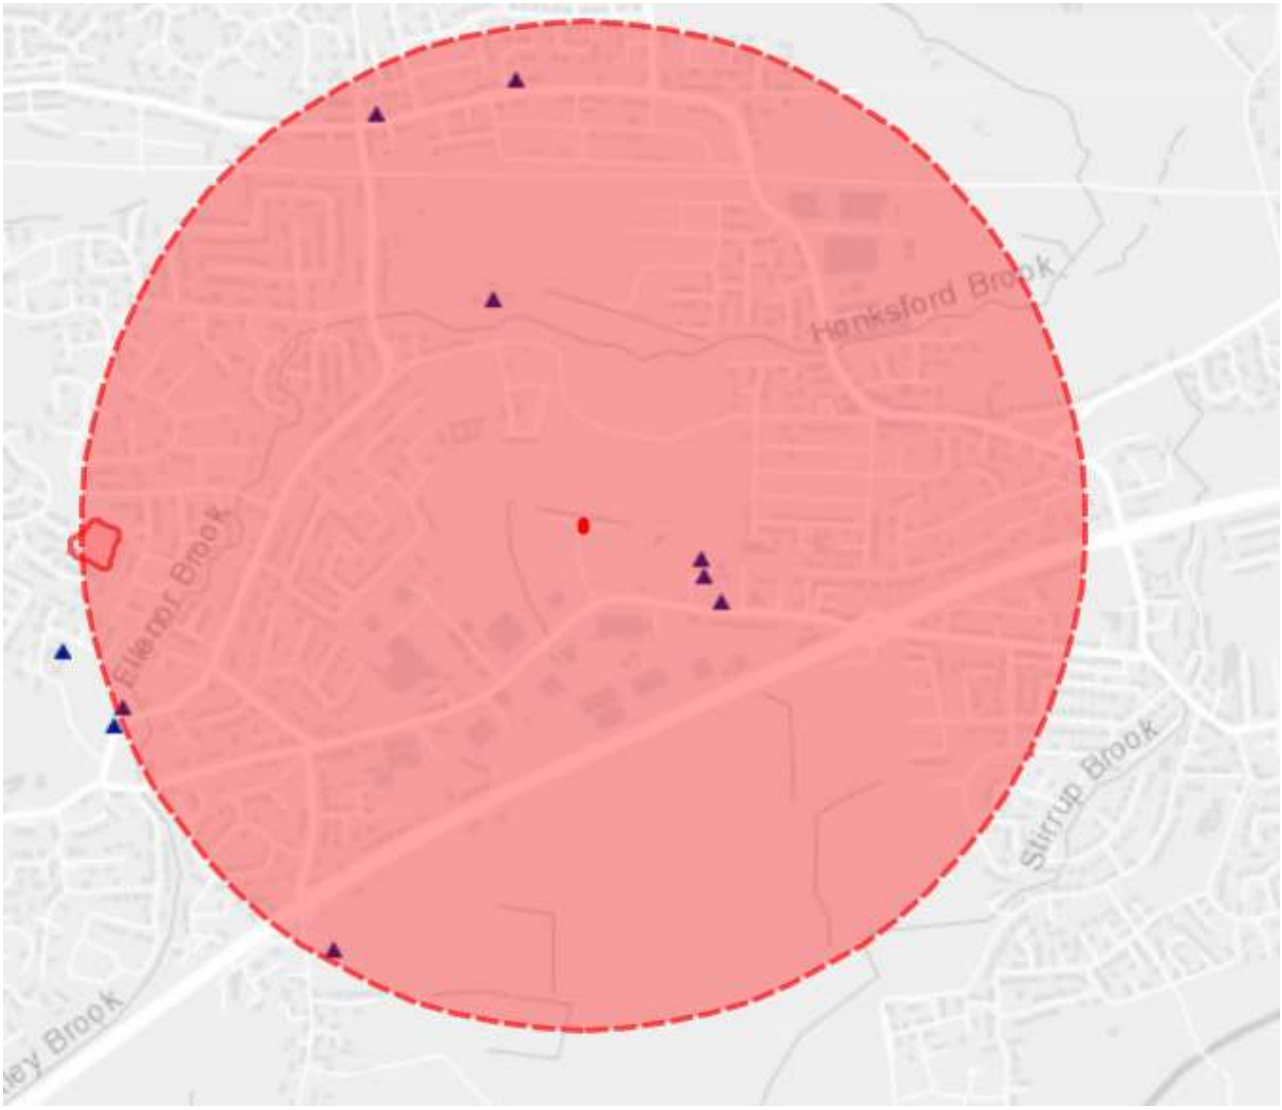
6.1.3. In addition, this assessment has been prepared in the context of national and local heritage planning policy. The assessment is presented to accord with the national policy requirement of NPPF paragraph 194, to describe the significance of heritage assets affected by the proposed development and evaluate the consequent impact of the proposed development.

6.1.4. The aim of this assessment is to demonstrate that the proposed development meets the requirements of local and national planning policy and relevant legislation.

6.1.5. The application site is located towards the south eastern extent of the main urban area of Astley and consists of a series of fields. The site lies adjacent to predominantly residential areas to the north and east, industrial development to the west. The relationship with the other areas is severed by Chaddock Lane which bounds the site to the south respectively. In this manner, the site is a pocket of contained fields.

6.2 IDENTIFICATION OF HERITAGE ASSETS

6.2.1. As with the majority of Greater Manchester towns, Wigan saw a rapid period of expansion during the Industrial Revolution, with associated building and infrastructure being developed. As such, there are a number of listed assets within the wider local area. However, the majority of these are concentrated close to the centre of Leigh and Wigan, some 5km and 13km to north west of the site, with a significantly smaller number and concentration of assets to be found close to the site or within the intervening space.



6.2.2. However, a number of listed assets are to be found closer to the site, as listed below and illustrated in **Figure 6-1**:

- Grade II listed Chaddock Hall Barn (LEN: 1163209) approx. 200m east of the site boundary;
- Grade II listed Chaddock Hall (LEN: 1356222) approx. 150m east of the site boundary;
- Grade II listed Chaddock Hall garden wall and stone gatepiers (LEN: 1068485) approx.. 150m east of the site boundary;
- Grade II listed Garett Hall (LEN: 1163348) approx.230m north of the site boundary;
- Grade II listed 109, Sale Lane (LEN: 1163421) approx. 630m north of the site boundary;
- Grade II listed 7 Sale Lane (LEN 1068448) approx. 680m north of the site boundary;

- Grade II listed Manor House Farmhouse (LEN 1068446) approx. 830m south west of the site boundary

6.2.3. Consideration of these assets and the scoping out of assets further from the site is considered appropriate. This is primarily due to the spatial and functional separation between the site and those assets. The assessment of the assets listed above will demonstrate that this approach is sufficient to understand the potential impact of the proposal on the significance of any assets, given the fact that these assets are closer to the site and similarly listed and have a closer, albeit limited, spatial, visual or functional relationship with the site than any of these other assets (there are no Grade I listed assets within at least one mile of the site).

Figure 6-1 - 1km radius from appeoximate centre of site. The blue triangles are listed assets (Historic England.org)

6.3 LEGISLATIVE AND POLICY CONTEXT

6.3.1. The purpose of this assessment is to demonstrate that the proposed residential development meets the requirements of local and national planning policy and relevant legislation.

Planning (Listed Buildings and Conservation Areas) Act 1990

6.3.2. The legislative requirements of the Planning (Listed Buildings and Conservation Areas) Act 1990 provide specific protection for buildings of special architectural or historic interest, over and above that provided by development management.

6.3.3. Section 66 of the 1990 Act requires that, when considering whether to grant planning permission for development which affects a listed building, the local planning authority, *"shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses".*

National Planning Policy Framework (2023)

6.3.4. Section 16 (paragraphs 189 to 208) of the NPPF is specific to conserving and enhancing the historic environment.

6.3.5. Paragraph 197 states:

"In determining planning applications, local planning authorities should take account of: - the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation".

6.3.6. Paragraph 199 states:

"When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation".

6.3.7. Significance is defined as:

"The value of a heritage asset to this and future generations because of its heritage interest. The interest may be archaeological, architectural, artistic or historic. Significance derives not only from a heritage asset's physical presence, but also from its setting".

6.3.8. The setting of a heritage asset is defined as:

"The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral".

6.3.9. In determining applications, the NPPF also advises that LPAs should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the asset's importance and no more than is sufficient to understand the potential impact of the proposal on their significance.

Historic England Guidance

6.3.10. Historic England is the Government's statutory adviser on the historic environment and its powers are set out in the National Heritage Act 1983.

6.3.11. Historic England provides guidance on a variety of topics. The guidance most pertinent to these development proposals is set out in three documents relating to significance, setting and development:

- Conservation Principles: Policy and Guidance for the Sustainable Management of the Historic Environment (2008);

- Historic Environment Good Practice Advice in Planning Note 2: Managing Significance in Decision-Taking in the Historic Environment (2015); and,
- Historic Environment Good Practice Advice in Planning Note 3: The Setting of Heritage Assets (2017).

6.3.12. Conservation Principles, Policy and Guidance (English Heritage 2008) sets out how the relative levels of significance can be measured:

- Exceptional: an asset important at national to international levels' including scheduled monuments, Grade I and II* listed buildings and World Heritage Sites.
- High: a designated asset important at regional level and also at national level, including Grade II listed buildings and conservation areas. Substantial harm should be exceptional.
- Medium: an undesignated asset important at a local to regional level, including local (non-statutory) listed buildings or those which make a positive contribution to the setting of a listed building or to a conservation area. May include less significant parts of listed buildings. Buildings and parts of structures in this category should be retained where possible, although there is usually scope for adaptation.
- Low: structure of feature is of very limited heritage value and note defined as a heritage asset. May include insignificant interventions to listed buildings. The removal or adaptation of structures in this category is usually acceptable where the work will enhance a related heritage asset.
- Negative: structure of feature that harms the value of a heritage asset. Wherever practicable, removal or negative features should be considered, taking account of setting and opportunities for enhancement.

6.3.13. The Setting of Heritage Assets, published 22 December 2017, gives general advice on understanding setting, and how it may contribute to the significance of heritage assets and allow that significance to be appreciated, as well as advice on how views contribute to setting.

6.3.14. The document sets out the broad approach to assessment recommended by Historic England, in terms of the significance of any heritage assets including development affecting the setting:

Step 1: *Identify which heritage assets and their settings are affected*

Step 2: *Assess the degree to which these settings make a contribution to the significance of the heritage asset(s) or allow significance to be appreciated*

Step 3: *Assess the effects of the proposed development, whether beneficial or harmful, on that significance or on the ability to appreciate it*

Step 4: *Explore ways to maximise enhancement and avoid or minimise harm*

Step 5: *Make and document the decision and monitor outcomes".*

Wigan Core Strategy Local Plan

6.3.15. Policy CP11 sets out that the council will protect the borough's heritage by conserving, enhancing and promoting key heritage assets and non-statutory heritage assets of local interest; prioritising the conservation of heritage assets at risk from decay and use heritage assets positively to strengthen identity and image.

6.3.16. Objective BEL 1 aims to conserve and enhance the borough's built heritage.

Assessing Significance

6.3.17. This section identifies the assets and provides details on their significance, taking account of the NPPF and Historic England Guidance. It then assesses the impact on the significance of these assets as a result of the proposed development.

Chaddock Hall Barn

6.3.18. Chaddock Hall Barn is a Grade II listed, 17th century farm building. It is listed due to its age, stone dressings and carved rich coat of arms.

6.3.19. The barn at Chaddock Hall is in such poor condition that its future must be uncertain although it is subject to a planning application for conversion to dwellings.

Chaddock Hall

6.3.20. Was an altered 17-19th Century house with brick and timber- framing most of which was rendered over.

6.3.21. Chaddock Hall was subject to a serious arson attack in 2014 and the interior was completely destroyed leaving only the walls standing and in early 2017 the remains of the hall collapsed completely with any possibility of restoration highly unlikely.

Chaddock Hall Gardell Wall and Gapiers

6.3.22. A Garden wall and stone gatepiers at Chaddock Hall G.V. II Walls and gate piers. English garden wall bond brick with stone dressings. Quadrangular in plan with gates to south. The walls feature round-topped copings and occasional buttressing piers. The adjoining summer house is of c.1905. Tall gate piers with raised panels in each face and moulded bases, collars and capitals. Cast-iron gates.

Garett Hall

6.3.23. Garrett Hall is a grade II listed Farmhouse of a Timber-framed structure dating from the 17th century which has been largely rebuilt in brick. Timber posts are visible at the rear which has a continuous outshot, and a projecting brick chimney stack. Formerly the house of the Tyldesley family.

6.4 IMPACT ON SIGNIFICANCE

6.4.1. An assessment of significance is a requirement for any application that could potentially affect a heritage asset. Based upon the identification, description, significance and setting of the heritage assets coupled with an understanding of the development proposals as set out earlier, this section assesses the impact of the proposed development on the significance of the heritage assets, in accordance with paragraph 194 of the NPPF.

6.4.2. The following concludes that the proposal will not be detrimental to the character or setting of the listed and non-designated assets and thus their significances will be unaffected.

Chaddock Hall Barn

6.4.3. The proposed development site is at least 200m from Chaddock Hall Barn, with a residential area in the intervening space.

6.4.4. The significance of the listed church derives largely from its age, architectural interest and from its steeple that is visible in views to the church and therefore can potentially be susceptible to visual hanges over a wide area. However, the church has long been experienced within an urban setting

Chaddock Hall Garden Wall and Gapiers

6.4.5. The proposed development site is at least 150m from Chaddock Hall Garden Wall and Gaspiers, with a residential area in the intervening space.

6.4.6. The significance of the listed garden wall derives largely from architectural interest. However, the wall has long been experienced within an urban setting.

6.4.7. On this basis, combined with the distance of the application site and the residential areas separating the site and heritage features, there will be no harm to the significance of the building.

6.4.8. **Garett Hall**

6.4.9. The proposed development site is at least 230m from Garett Hall, with a residential area in the intervening space.

6.4.10. Whilst glimpses of the hall may be visible from parts of the site, these will be largely screened by intervening residential uses, vegetation and the have undergone a wide variety and ever-changing range of uses since their creation to reflect the changes in population, commerce, technology and policy. On this basis, combined with the distance of the application site and the residential areas separating the site and heritage features, there will be no harm to the significance of the building.

6.5 CONCLUSION

6.5.1. It has been demonstrated above that the development of the application site for housing won't result in any adverse impacts upon any nearby listed or non-designated heritage assets. This is also the conclusion reached in the HEA that was commissioned by the Council.

6.5.2. Based on the above assessment, the proposal accords with Core Strategy Local Plan Policy CP 11 and the NPPF, as it will not result in any harm to the listed and non-designated heritage assets in the vicinity of the site.

7 OTHER MATERIAL CONSIDERATIONS

7.1 OVERVIEW

7.1.1. This chapter focusses on appraising the proposed development in the context of technical planning policies and guidance contained in the Development Plan and NPPF.

7.1.2. Policy CP10 of the Core Spatial Strategy states that all development will be required to adhere to high standards of design. Development should have a positive impact and will be expected to respond to scale, density, massing, height, landscape of surrounding buildings and areas in general whilst respecting existing context.

7.2 DESIGN AND SUSTAINABILITY

7.2.1. The NPPF also provides guidance on development and ensures that the design of development incorporates the principles of sustainable development and the need to create better places in which to live and work. Paragraph 130 sets out several design criteria with the purpose being to ensure that design is of a high quality and appropriate for the area in which the development is located.

7.2.2. The proposed development has been designed in accordance with the above guidance;

- The layout, scale and appearance of the proposals have been developed to create a high quality and attractive scheme with integrates well with the wider suburban townscape;
- The elevational treatment has been carefully considered in the context of the site's current setting in order to create a contemporary and attractive appearance;
- The development includes soft landscaping and tree planting which seeks to enhance the sites boundaries;
- The development has been designed to respect and protect neighbouring residential amenity including the neighbours' amenity, identity and character of the area;
- The proposal provides easy access for future users who wish to arrive to by bicycle. The proposal itself incudes cycle parking provision; and
- The development is accessible to all with disabled bays provided.

7.2.3. As such, the design of the proposed development is in full accordance with Local Plan policy CP10 as well as paragraph 130 of the NPPF.

7.3 TREES AND LANDSCAPING

7.3.1. A tree survey prepared by BB Trees presents the findings of the survey and assessment of the quality of the existing trees on and adjacent to the site, based on their current condition and quality. The assessment includes impacts arising from the proposed development of the site on these trees.

7.3.2. Fifteen individual trees and nineteen groups were surveyed. Of which around 5 trees, 8 groups are on the site boundary.

7.3.3. The proposed development necessitates the removal of 7 trees and 6 groups within the site boundary in order to accommodate the building and facilitate the wider development.

7.3.4. Whilst the development involves the loss of trees, replanting is proposed which will result in a significant net gain of trees across the site.

7.3.5. The landscape strategy has been formulated specifically to strengthen the sites boundaries with additional tree planting and hedgerows. The strategy ensures that the buildings will be well screened from the public realm, particularly views from the adjacent existing residential estate and existing and proposed public rights of way. The area to the north of the site has been proposed to improve screening of units 1 & 2 from the adjacent housing while also offering ornamental/aesthetic value to pedestrians and workers in the proposed offices.

7.3.6. The application includes landscaping cross-section drawings to demonstrate how the proposed earth bund will function with fully developed native vegetation atop.

7.3.7. Up to 310 trees in addition to hedgerow planting will be introduced across the site and the site's boundary. Areas of ornamental shrub mix, and meadow will assist in creating a landscaped setting for the warehouse units.

7.3.8. The landscape strategy ensures that once trees and hedgerows are fully mature the building will be fully screened from the public realm and as such visually contained within the site. The landscape strategy is considered appropriate in order to offset the minor impact of the proposals on the wider landscape.

7.3.9. As a result of the above, the proposal delivers significant enhancements in terms of arboriculture landscaping and therefore accords with Local Plan Policy CP12 and paragraph 130 of the NPPF.

7.4 NOISE

7.4.1. A Noise Assessment prepared by Tetra Tech accompanies the submission. The noise report establishes the noise climate in the surrounding area and whether the proposed operations at the site, taken as a worst-case scenario, would give rise to any adverse impacts from a noise perspective.

7.4.2. The report provides a comprehensive overview of the proposal and the operations/plant which are likely to result in noise disturbances. The assessment has accounted for HGV movements, staff car parking activity and fixed pant associated with the development.

7.4.3. Predicted noise levels indicate that they will meet WHO noise intrusion criteria at the nearest sensitive receptors during both the daytime and night-time with windows open or closed. The assessment includes acoustic bunds and boundary fencing associated within neighbouring housing development within the model and concludes the impact on the nearest sensitive receptors will not be expected to have a 'significant adverse impact' on health or quality of life.

7.4.4. Noise levels derived from plant predicted to be equal to existing daytime and night-time background noise. During the construction phase of the development, noise levels at existing noise sensitive properties would be within BS 5228 fixed limit criteria.

7.4.5. In light of the above, the proposal will not result in an adverse impact in terms of noise and therefore the proposal is in full accordance with policy CP17 of the Local Plan and paragraph 185 of the NPPF.

7.5 AIR QUALITY

7.5.1. Tetra Tech have prepared an Air Quality Assessment which forms part of this submission. The assessment work has found that there will be no significant effects on air quality matters, including on ecological and human receptors.

7.5.2. An assessment was undertaken to quantify potential effects emanating from road traffic emissions and construction dust impacts which may arise from the development's operational and construction phases.

7.5.3. Site specific mitigation measures are proposed to deal with construction phase impacts on air quality. With these mitigation measures in places, effects from the construction phase are not predicted to be significant.

7.5.4. The assessment includes a study on the long-term effects associated with the proposed development in respect of Nitrogen Dioxide and Particular Matter associated with traffic. It is considered that modelled results are deemed to be negligible in terms of air quality impacts when combined with proposed mitigation such as those outlined within the Travel Plan.

7.5.5. The proposal will therefore not result in an adverse impact in terms of noise and therefore the proposal is in full accordance with policy CP17 of the Local Plan and paragraph 186 of the NPPF.

7.6 EXTERNAL LIGHTING

7.6.1. A Lighting Assessment undertaken by WSP accompanies the submission. The assessment sets out the proposed external lighting scheme and provides guidance in terms of good practice to ensure obtrusive lighting is reduced.

7.6.2. The lighting scheme is based on energy efficient LED luminaires and seeks to illuminate architectural features of both the buildings and the external landscaping scheme. The external lighting also takes into consideration both the level and uniformity of lighting required for security, CCTV operation, safe movement of visitors, staff and residents to the buildings/landscaping around the site.

7.6.3. The lighting strategy seeks to reduce lighting pollution through mitigation such as preventing upward light pollution through a combination of optimal mounting heights and by utilising low energy efficient LED lighting luminaires that limit glare. The layout and type of lighting used takes into consideration and limits any possible impact on the surrounding amenity and landscaped areas.

7.7 ECOLOGY AND BIODIVERSITY NET GAIN

7.7.1. A phase 1 preliminary ecological survey has been prepared by The Ecology Practice which supports this application. The majority of the site was assessed as being a mixture of poo semi-improved grassland, semi-improved grassland and pockets of dense scrub with species-poor hedgerow.

7.7.2. The assessment included a bat survey, breeding bird survey and Great Crested Newt survey.

7.7.3. Great Crested Newt eDNA surveys returned negative results within the application site. Bat ground Level tree assessments determined that two trees had moderate potential for bat roost presence with other classed as low or negligible.

7.7.4. The breeding bird survey returned signs of breeding on site for singing dunnock and four song thrush.

7.7.5. Mitigation is proposed for both vegetation clearance to avoid impact on breeding birds and bats in the form of qualified licenced ecologist to visit the site 48 hours before clearance works to determine presence. In addition, mitigation proposals include the provision of bat and bird boxes across the site.

7.7.6. A Biodiversity Net Gain (BNG) assessment has been undertaken using the DEFRA Metric 4.0. The proposals would result in a net gain deficit of -10.95 Habitat Units (-17.43% and net gain in Hedgerow Units (+133.51%).

7.7.7. The proposal will not result in any harm to the negligible ecological value of the site or neighbouring habitats and actually delivers enhancements in the form of additional habitat creation as a result of tree planting and landscaping at the site.

7.7.8. The proposal delivers enhancements in terms of ecology and therefore accords with policies CP12 of the Local Plan and paragraph 180 of the NPPF.

7.7.9. The lighting strategy has been carefully generated to ensure the immediate environment has been protected. The development is therefore in accordance with Policy CP17 of the Wigan Core Strategy Local Plan.

7.8 HIGHWAYS, TRAFFIC AND TRANSPORT

7.8.1. In accordance with paragraph 111 of the Framework a Transport Assessment, prepared by Hydrock, has been submitted alongside the application. The application includes vehicle tracking diagrams to demonstrate safe ingress and egress of HGV and vehicles into the site and internal access road.

7.8.2. The assessment sets out that the site demonstrates a good level of locational sustainability being accessible by public transport, walking and cycling.

7.8.3. The assessment indicates that that the development has the potential to generate 112/133 morning and evening peak vehicles trips. The level of peak hour traffic is below DfT significance thresholds and the proposal will not lead to a severe impact to either the existing or the future forecast capacity on the local highway network.

7.8.4. In terms of parking provision, the proposal includes 328 car parking spaces (including provision of 17 disabled bays) and 77 HGV parking bays. The proposal therefore accords with the Council's required standards for a B2/B8 use.

7.8.5. In addition to the above, 60 cycle parking spaces will be provided ensuring any future employees are able to cycle to work.

7.8.6. In light of the above, the development would not result in adverse impacts on the capacity or safe functioning of the highway as a result of the development and that the requirements of CP7 of the Local Plan and Paragraph 111 of the Framework would be met in full.

7.9 ENERGY AND SUSTAINABILITY

7.9.1. An energy statement has been prepared by CPW and is enclosed as part of this application. The statement has conducted an appraisal of the renewable and low carbon technology energy options to be employed at the site once operational in order to align with the requirements set out under paragraph 157 of the NPPF with regards to reducing energy consumption during the lifetime of the development.

7.9.2. The statement concludes that a number of measures are proposed which can have significant impacts in CO2 reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.

7.9.3. The proposals can therefore be considered to be in full accordance with policy CP13 of the Local Plan.

7.10 CRIME IMPACT

7.10.1. A Crime Impact Statement prepared by Design for Security confirms the proposed scheme will be safe and secure.

7.10.2. The statement outlines that currently the service yards of the industrial units will be well secured with a 2400mm high paladin fence, restricting access to these spaces. In addition, it is noted that the public footpath does not pass to closely to the industrial units and does not leave them vulnerable. The route of the footpath is generally linear and well overlooked.

7.10.3. The proposed industrial units are likely to be staffed at all times, reducing the potential for criminal and antisocial activity. There is only one vehicular access point into the site, allowing traffic entering the site to be monitored and restricted easily.

7.10.4. The footprints of the proposed buildings are relatively simple and contain few recesses that could provide concealment for offenders or those antisocially minded. Cycle stands are generally positioned where they can easily be seen from the building and access road, allowing for passive surveillance opportunities.

7.10.5. Car parking areas are generally positioned where they can be seen from the main entrance or the access roads.

7.10.6. The statement outlines a number of mitigation measures and enhancements in relation to boundaries, lighting, vehicular access arrangements, perimeter fencing and service yards which could be implemented across the site and unit itself to increase security. Where possible, these measures have been included within the design and will be implemented once the development is occupied.

7.10.7. In this respect, this scheme accords with paragraph 92 of the NPPF which highlights that development should create safe, inclusive and accessible places which promote health and well-being.

7.11 FLOOD RISK AND DRAINAGE

7.11.1. A Flood Risk Assessment (FRA) prepared by BE Design accompanies the application. It investigates the potential flood risk impacts of the proposed development and is considered proportionate to the degree of flood risk and to the scale, nature and location of the development.

7.11.2. The flood maps provided by the Environment Agency (EA) locate the site within Flood Zone 1, i.e. and defined as having an annual probability of fluvial flooding of less than 1 in 1000 in any year (<0.1%) and is classed as less vulnerable therefore development is appropriate.

7.11.3. The drainage strategy responds to the relevant policy and guidance and is based upon an assessment of the existing site connections, the FRA and site investigations.

7.11.4. Existing attenuation basins at the site feature as part of the wider landscape strategy and will assist with the management of water across the site. A new surface water drainage system will be constructed to convey runoff from the impermeable surfaces on the four building units including access road. The outline foul water drainage strategy is to connect to the existing foul drainage

network of the area. There would be very limited increase in the foul water discharge rates generated by the new development.

7.11.5. The above is considered an acceptable solution in relation to drainage and will ensure that the development does not create any additional flood risk issues for the local area.

7.11.6. The proposed drainage design and approach to flood risk mitigation therefore accords with policy CP16 of the Local Plan and paragraph 167 of the NPPF.

7.12 GROUND CONDITIONS

7.12.1. The application is accompanied by a Desk Study Risk Assessment (Phase 1 Site Investigation) and Due Diligence Report (Phase 2 Site Investigation), both prepared by Discovery Investigation. A Coal Mining Risk Assessment has also been undertaken for completeness.

7.12.2. The desk study provides an overview of the potential hazardous substances or conditions on or the near the site.

7.12.3. The assessment considers that there could be potential contaminants but these are typically associated with and considered to be representative of the site's former historical agricultural uses. The assessment sets out that it is considered there is a low-moderate to moderate risk of contamination and that further surveys should be undertaken.

7.12.4. The Phase 2 Site Investigation provides details of trial pits/ground samples taken in order to better assess the ground conditions and makes a series of recommendations, which can be secured via planning condition.

7.12.5. Subject to the undertaking of the recommendations set out in the forementioned technical documents, the development proposals accord with the requirements of paragraph 183 of the NPPF.

8 S106 HEADS OF TERMS

8.1.1. At the time of writing, based on feedback received during pre-application discussions with the Council, it is anticipated that any S106 Agreement associated with the application will be limited to the provision of a contribution towards the upgrade and re-validation of MOVA at the junction of A580/Chaddock Lane.

9 PLANNING BALANCE

9.1.1. This application seeks full planning permission for the development of a new employment site of up to 32,826 sqm (353,336 sqft) B2/B8 floorspace (including ancillary integral office space (Use Class E(g)) with associated car parking and service yard; new internal access road; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping at Land at Astley Park Way (off Chaddock Lane).

9.1.2. The site benefits from an allocation as a Primary Employment Area (Ref. EM1A) within the Wigan Local Plan and the proposals will help meet the current and changing needs of potential occupiers on this allocated Primary Employment Area within the Local Plan.

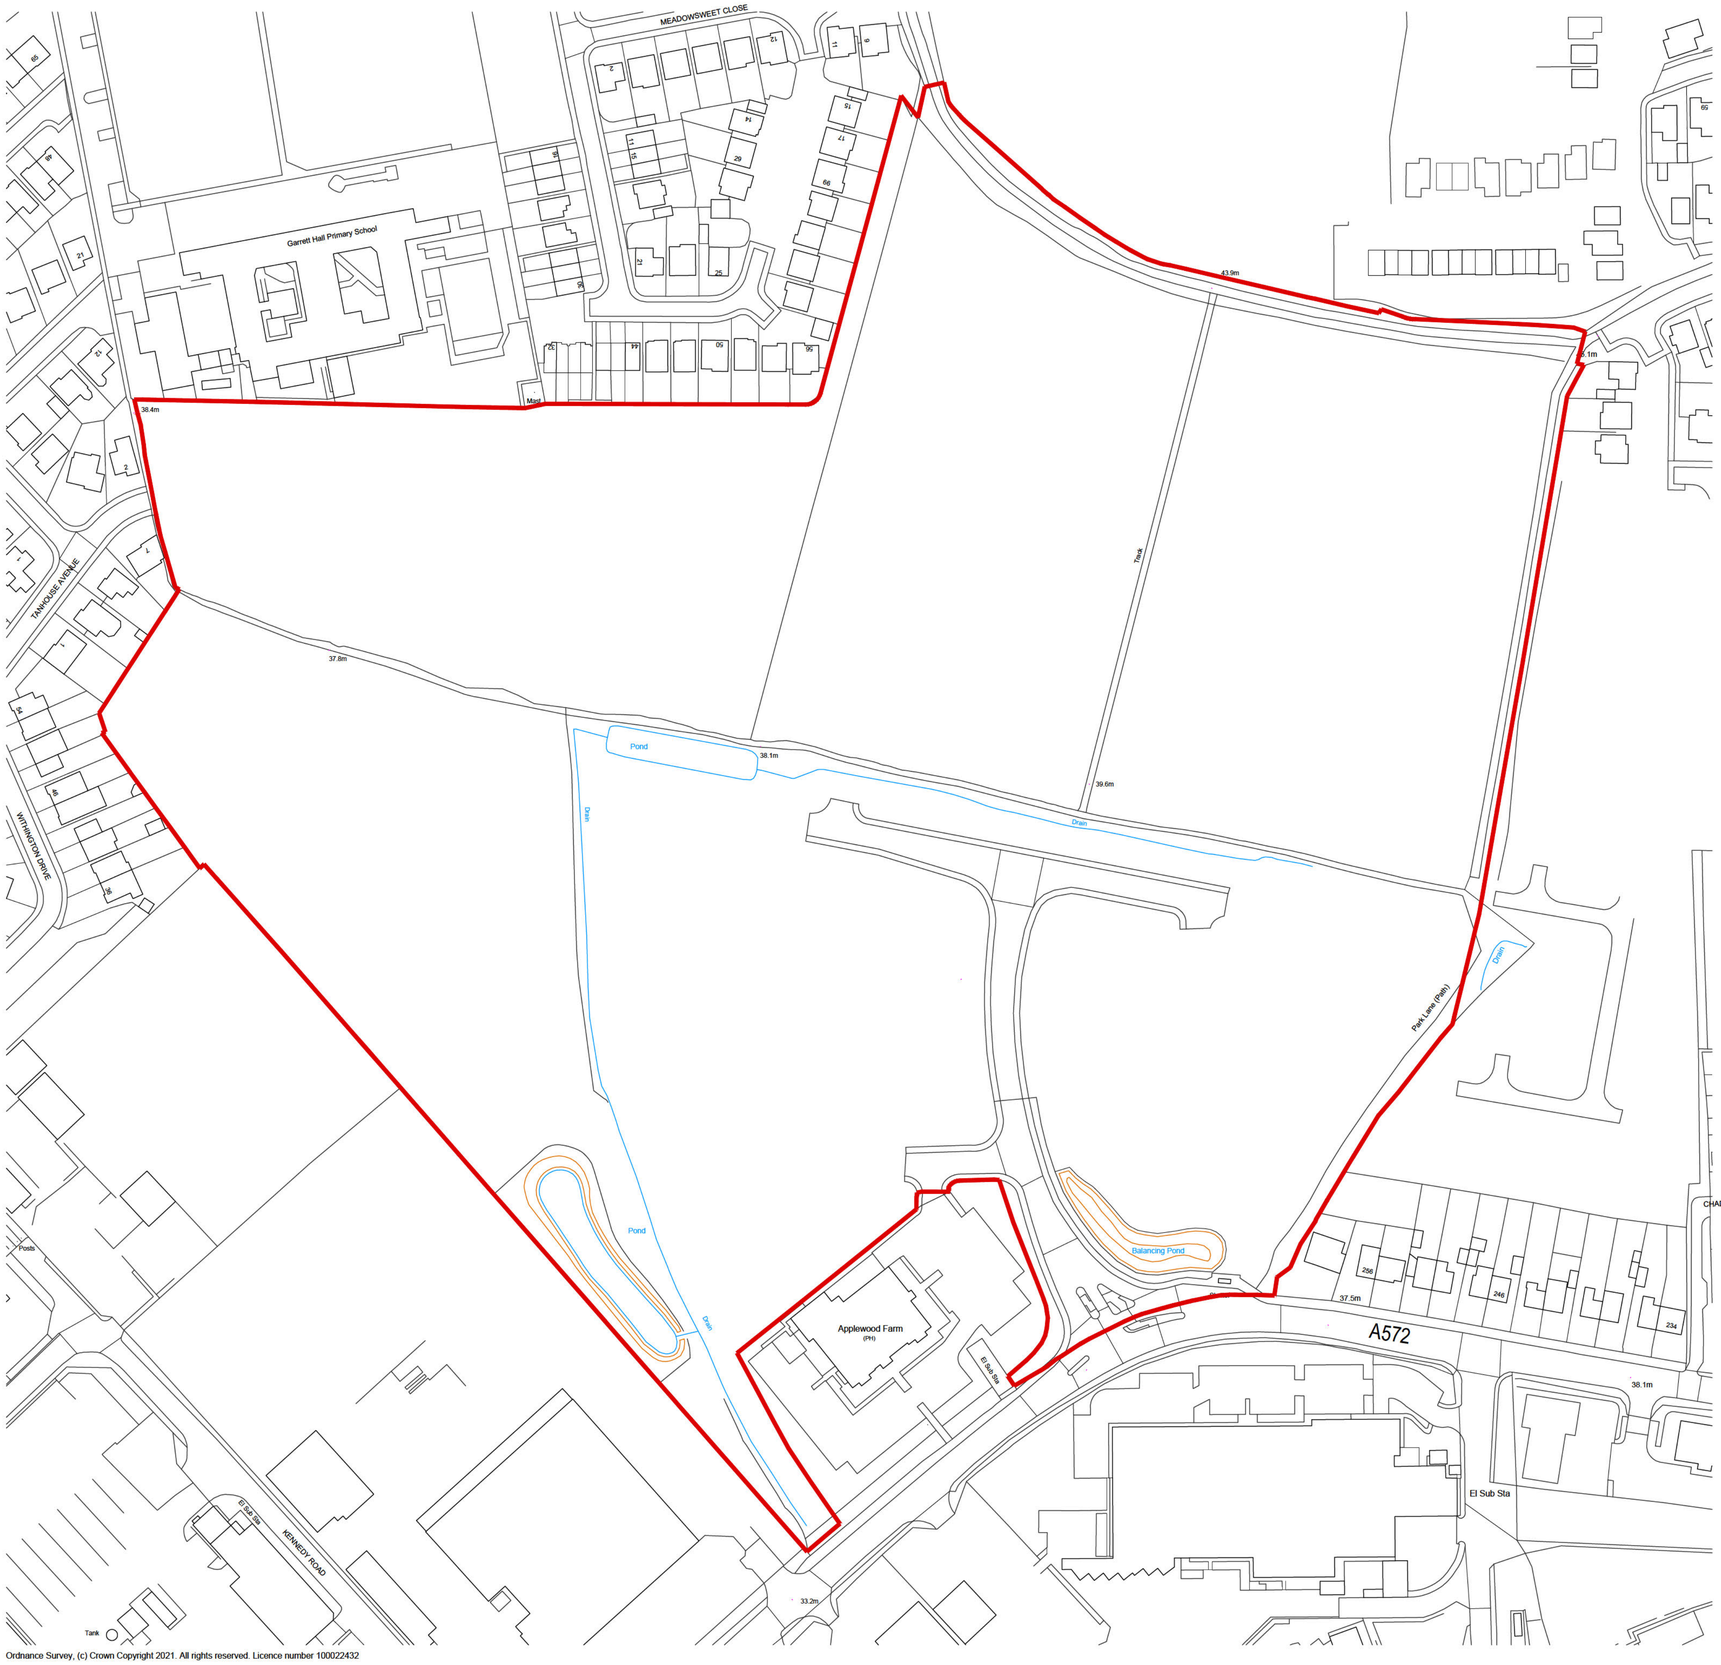
9.1.3. The NPPF is focused on building a strong and competitive economy, and supporting sustainable development – the proposed development wholly aligns with these principles.

9.1.4. Furthermore, the proposals are considered to accord with key Wigan Local Plan Core Strategy planning policies SD1, SP1, SP2 and CP5 and saved policy EM1A from the Wigan UDP.

9.1.5. There are a number of significant benefits associated with the development including;

- Delivery of a range of new, logistics based flexible employment units to diversify employment land provision in Astley;
- Significant economic benefits including;
  - Creation of temporary employment during the construction phase;
  - Full-time employment once operational;
  - Additional expenditure in the local economy once operational; and
  - Promoting further investment and retention of industry within Astley;
- Efficient redevelopment of an allocated site which makes optimal use of the site and reduces the need for additional employment sites to be released;
- Social benefits through significant job creation both during construction and once operational with a range of positions created. New employment would be accessible to the local community; and
- Environmental benefits such as new landscaping, tree planting and footpath improvements throughout the site.

9.1.6. In addition to the above benefits, the application is supported by a suite of technical assessments that clearly demonstrate that the proposed development is technically and environmentally acceptable in terms of design, highways impact, flood risk/drainage, ecological impact, air quality and noise.



9.1.7. The principle of development is acceptable, and the extensive technical assessments demonstrate that the proposed development clearly constitutes sustainable development.

9.1.8. As such, the proposal is in accordance with the Development Plan and, in line with paragraph 11 of the NPPF, should be approved without delay.

CONSULTATION LETTER ISSUED TO LOCAL RESIDENTS

Public

Dear Occupier

FEEDBACK INVITED ON DEVELOPMENT PROPOSALS AT LAND AT ASTLEY PARK WAY (OFF CHADDOCK LANE), TYLDESLEY, WIGAN

We write on behalf of PLP to inform you of plans to develop land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan, M28 1DP for a proposed logistics and warehousing development.

As a local resident, we wanted to share details of the proposals with you before submitting the application to Wigan Council. We are keen to hear your views.

PLP

PLP is a specialist UK logistics and industrial property business with a proven track record. PLP is committed to delivering a high-quality logistics and warehousing development to accommodate flexible industrial, storage and distribution uses with ancillary office spaces, service yards, landscaping and parking areas to meet the current and changing needs of commercial enterprises.

Site background

The site is allocated as a Primary Employment Area within the Wigan Local Plan and is therefore an appropriate location for such development. The site boundary is shown on the enclosed plan.

You may recall that outline planning permission was granted previously at the site for mixed employment and residential development (approved in February 2017), with the residential development associated with this permission now mostly constructed.

The approved employment development element has since expired; therefore, we are seeking a new planning application to enable the development to come forward in the short-term.

Overview of the proposals

The proposed development has been designed to take into account site constraints and to mirror the development parameters approved in the expired planning permission as far as possible.

- Extensive landscaping is proposed including the formation of landscaped mounds with tree planting on top along all site boundaries.
- Existing public footpaths passing through the site will be diverted and upgraded to ensure that public connectivity with the surrounding area is not only maintained but significantly improved for all users.
- The site will be accessed from the existing junction at Chaddock Lane to the south and all of the warehouse service yards will be internally facing to ensure that no service yards face towards the site boundaries or residential areas.

We have been working closely with planning officers to bring an application forward to develop the site and intend to submit an application to Wigan Council shortly.

A Proposed Site Masterplan providing further details of the layout of the proposed development, diverted/upgraded footpaths and extensive landscaping proposals is attached to this letter.

The next page sets out the key benefits of the proposals and how you can provide feedback.

Key benefits of the proposals

The development proposals will deliver the following benefits to the Borough, most of which will be experienced at the local level:

- **Economic benefits:**
  - The proposals will deliver a high-quality and attractive employment development which will be appropriate within its surrounding context and provide an efficient use of land, taking advantage of the already built access road (Astley Park Way) and in doing so help the original aspirations of Wigan Council's employment allocation to be realised.
  - The proposal will create temporary and permanent economic benefits in the form of up to **500 new jobs** with the potential to also generate employment throughout the supply chain and bring investment and additional spending to the local economy;

- **Design quality and ensuring a sensitive site layout:**
  - The proposal will feature a carefully designed modern employment development that respects the local character, the amenity of nearby residents and that seeks to maintain and improve the permeability of the site currently provided by the public footpaths and bridleways passing through the site.
  - The masterplan has been sensitively developed with constraints in mind and through an extensive landscaping scheme and thoroughly considered architectural layout will ensure that the development is appropriate to its context and offers benefits to the community.

- **Landscaping proposals**: the landscaping proposals for the development will include the provision of:
  - Planting of **310 new trees** of which approximately half (155 trees) will be at a height of 1.75m to 3.5m at the point of planting and will mature and grow taller over time;
  - Significant areas of woodland, thicket, ornamental, wildflower and grassland across the site, much of which will surround the proposed diverted and upgraded footpaths;
  - Provision of 2,215 linear meters of new hedgerows; and
  - Provision of landscaped mounds along the site boundaries, ranging in height from 2.1m – 4.1m in height, which will then have woodland tree planting on top to create a considerable landscaped buffer to provide visual screening between the warehouse buildings and neighbouring residential properties.

You can contact myself via [redacted] (Mon-Fri during office hours) or via email UKPlanningComment@wsp.com with comments.

Please provide any comments by **9 October 2023.**

There will, of course, also be a further opportunity for interested parties to formally comment on the planning application in due course, once submitted to Wigan Council.

I trust this is helpful. Please feel free to get in touch if you have any further queries.

Yours sincerely

0.00-0.40			MADEGROUND: Grass over soft dark brown slightly gravelly slightly sandy CLAY with rare brick fragments, rootlets and black gravel sized carbonaceous inclusions. Gravel is angular fine of black coal and brickstone. Sand is fine.	0.30	B	
0.40-1.10			Firm grey and black mottled brown slightly gravelly slightly sandy CLAY with rare black gravel sized carbonaceous inclusions. Gravel is subrounded fine of quartzite. Sand is fine. (GLACIAL TILL DEPOSITS)	0.30 0.30 0.30	D ES HV	 98 kPa
1.10-1.80			Stiff grey mottled brown sandy gravelly CLAY. Sand is fine. Gravel is angular fine medium and coarse of sandstone and coal. (POSSIBLY WEATHERED PENNINE MIDDLE COAL MEASURES FORMATION)	1.20 1.20 1.20	B D HV	 113 kPa
				1.80 1.80	B D	

Shoring/Support: None
Stability: All sides stable

GENERAL REMARKS

Machine excavated trial pit to 1.80 m bgl. Excavation was abandoned at 1.80m bgl due to soft ground conditions. Backfilled with arisings upon completion.

DEVIATING SAMPLE INFORMATION

Comments
Sample deviation is determined in accordance with the UKAS note "Guidance on Deviating Samples" and based on reference standards and laboratory trials.
For samples identified as deviating, test result(s) may be compromised and may not be representative of the sample at the time of sampling.
Chemtech Environmental Ltd cannot be held responsible for the integrity of sample(s) received if Chemtech Environmental Ltd did not undertake the sampling. Such samples may be deviating.

Key

N	No (not deviating sample)
Y	Yes (deviating sample)
NSD	Sampling date not provided
NST	Sampling time not provided (waters only)
EHT	Sample exceeded holding time(s)
IC	Sample not received in appropriate containers
HP	Headspace present in sample container
NCF	Sample not chemically fixed (where appropriate)
OR	Other (specify)

Lab ref	Sample id	Depth (m)	Deviating	Tests (Reason for deviation)
107886-1	TP314	1.90	Y	All (NSD)

ADDITIONAL INFORMATION

Notes

Opinions and interpretations expressed herein are outside the UKAS accreditation scope.
Unless otherwise stated, Chemtech Environmental Ltd was not responsible for sampling.
All testing carried out at Unit 6 Parkhead, Stanley, DH9 7YB, except for subcontracted testing.
Methods, procedures and performance data are available on request.
Results reported herein relate only to the material supplied to the laboratory.
This report shall not be reproduced except in full, without prior written approval.
Samples will be disposed of 6 weeks from initial receipt unless otherwise instructed.
For soils and solids, all results are reported on a dry basis. Samples dried at no more than 30°C in a drying cabinet.
Analytical results are inclusive of stones, where applicable.

Comments or interpretations are beyond the scope of UKAS accreditation
The results relate only to the items tested
Uncertainty of measurement for the determinands tested are available upon request
None of the results in this report have been recovery corrected
All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis
All Asbestos testing is performed at the indicated laboratory
Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

Sample Deviation Codes

A - Date of sampling not supplied
B - Sample age exceeds stability time (sampling to extraction)
C - Sample not received in appropriate containers
D - Broken Container
E - Insufficient Sample (Applies to LOI in Trommel Fines Only)

Sample Retention and Disposal

All soil samples will be retained for a period of 30 days from the date of receipt
All water samples will be retained for 14 days from the date of receipt
Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:

Deviations

In accordance with UKAS Policy on Deviating Samples TPS 63. Chemtest have a procedure to ensure 'upon receipt of each sample a competent laboratory shall assess whether the sample is suitable with regard to the requested test(s)'. This policy and the respective holding times applied, can be supplied upon request.The reason a sample is declared as deviating is detailed below. Where applicable the analysis remains UKAS/MCERTs accredited but the results may be compromised.

Sample:	Sample Ref:	Sample ID:	Sample Location:	Sampled Date:	Deviation Code(s):	Containers Received:

Sample Deviation Codes

A - Date of sampling not supplied
B - Sample age exceeds stability time (sampling to extraction)
C - Sample not received in appropriate containers
D - Broken Container
E - Insufficient Sample (Applies to LOI in Trommel Fines Only)

Sample Retention and Disposal

All soil samples will be retained for a period of 30 days from the date of receipt
All water samples will be retained for 14 days from the date of receipt
Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:
customerservices@chemtest.com

APPENDIX G - RISK ASSESSMENT DETAIL

CHEMICAL SCREENING CRITERIA

Rationale

For the protection of human health, screening criteria were selected from published generic assessment criteria (GACs) as published by DEFRA/CL:AIRE, LQM/CIEH and/or EIC/AGS/CL:AIRE. Generic values are selected based on the soil organic matter (SOM) content of the soils concerned. Currently generic criteria are published for SOM of 1, 2.5 or 6 %. In order to retain a degree of conservatism, screening criteria based on an SOM value of 1 % were adopted for the generic screening assessment. The possible generic end use scenario considered in the assessment of risks to long term human health was for a Commercial end use (COMM), as an initial screen to determine if more detailed assessment is required. The COMM scenario is defined as a standard end use for GACs based on the Human Health Risk Assessment guidance developed in line with the CLEA model.

This assessment used Suitable for Use levels (S4ULs) as published by LQM/CIEH whenever possible as the most up to date GACs. The S4ULs were used under licence, (Copyright Land Quality Management Limited, reproduced with permission; publication number S4UL3396. All rights reserved). It should be noted that S4UL values calculated for threshold substances represent a concentration in soils below which the risk to human health is **NEGLIGIBLE**. For non-threshold substances concentrations in soil less than the S4UL values represent a **MINIMAL** risk.

In addition, Category 4 Screening Levels (C4SLs) were used as published by DEFRA/CL:AIRE, in this case for lead (Pb). In the absence of S4ULs or C4SLs, EIC/AGS/CL:AIRE GACs and/or in house calculated values were used (using the CLEA spreadsheet). Occasionally values from the USEPA Region 9 criteria were used. The site has been considered as a single averaging area for the human health screening process. This is based on the size and proposed use of the site.

If exceedances were recorded, the relevant data sets were reassessed using the statistical methods as set out in “Guidance on Comparing Soil Contamination Data with a Critical Concentration”, CL:AIRE/CIEH, May 2008.

Concentrations of determinands in water samples were screened against UK environmental quality standards (EQS) or UK drinking water standards (DWS). In the absence of EQS or DWS, World Health Organisation (WHO) or USEPA Region 9 screening criteria were used.

It may become evident following further investigation and analysis that additional COCs come to light that are not present in the current list which may require screening criteria to be applied. If this becomes the case additional criteria shall be selected/derived and submitted to the regulators for comment and agreement.

The screening criteria for human health assessment and summary are presented below in Table G1 (Commercial)m with respective summary shown in Table G2.

HUMAN HEALTH SCREENING

Table G1: Human Health Soil Screening Criteria for a COMM End Use (1% SOM) and Summary

Determinand	Units	Screen Source
Asbestos Identification	N/A	S4UL
pH	pH Units	Prof
Boron (Hot Water Soluble)	mg/kg	S4UL
Arsenic	mg/kg	S4UL
Boron (water soluble)	mg/kg	S4UL
Cadmium	mg/kg	S4UL
Chromium (hexavalent)	mg/kg	S4UL
Chromium	mg/kg	S4UL
Copper	mg/kg	S4UL
Lead	mg/kg	C4SL
Mercury	mg/kg	S4UL
Nickel	mg/kg	S4UL
Selenium	mg/kg	S4UL
Vanadium	mg/kg	S4UL
Zinc	mg/kg	S4UL

Table G2: Human Health Soil Screening Summary for a COMM End Use (1% SOM)

Determinand	Units	Limit of detection	Minimum	Mean	Maximum	Count	Screen (COMM @1% SOM)	Screen Source	No. of Exceedances
Asbestos Identification	N/A	N/A	No Asbestos Detected	No Asbestos Detected	No Asbestos Detected	15	Presence	S4UL	**0**
pH		4.0	7.1	7.9	8.9	15	<5 or >10	Prof	**0**
Boron (Hot Water Soluble)	mg/kg	0.40	4.5	12.871	30	15	640	S4UL	**0**
Arsenic	mg/kg	1.0	0.4	0.4443	0.62	15	240000	S4UL	**0**
Cadmium	mg/kg	0.10	0.1	0.18	0.33	15	190	S4UL	**0**
Chromium	mg/kg	1.0	0.5	0.5	0.5	15	33	S4UL	**0**
Copper	mg/kg	0.50	13	26.286	49	15	8600	S4UL	**0**
Mercury	mg/kg	0.10	13	25.429	40	15	68000	S4UL	**0**
Nickel	mg/kg	0.50	12	42.286	72	15	2300	S4UL	**0**
Lead	mg/kg	0.50	0.1	0.1271	0.19	15	1100	C4SL	**0**
Selenium	mg/kg	0.20	14	20.143	32	15	980	S4UL	**0**
Vanadium	mg/kg	5.0	0.2	0.3729	0.68	15	12000	S4UL	**0**
Zinc	mg/kg	0.50	15	34.429	69	15	9000	S4UL	**0**
Chromium (Hexavalent)	mg/kg	0.50	28	61	110	15	730000	S4UL	**0**

No chemical exceedances for a COMMMERCIAL end use within samples tested, the site as a whole may be considered as being NOT CONTAMINATED from a human health perspective.

CONTROLLED WATERS

Groundwater was NOT encountered during the fieldwork.

Samples are to be recovered during subsequent monitoring visits.

The controlled waters risk assessment was carried out by screening chemical test data from groundwater samples recovered during the return monitoring visits against environmental quality standards and / or drinking water standards. The screening assessment and summary for leachate testing are detailed in Table G2.

Table G2: Controlled Waters Screening Criteria and Summary

DETERMINAND	Units	Min	Mean	Max	Count	Screen	Standard	No. of Exceedances

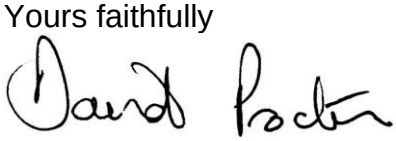
Dear Sir/Madam

This letter is to let you know about the following application that has been submitted:

Application Number : A/23/96226/MAJOR
Location : Land At Astley Park Way Worsley
Proposal : Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works

The application forms and plans can be viewed on our website two working days from the date of this letter at https://planning.wigan.gov.uk/online-applications/ .



We have a limited time to consider this application, so any comments you wish to make should be submitted by using the online system by **1st December 2023.**

If you decide to send comments, no acknowledgement will be sent and we are unable to enter into any correspondence. Please note any comments you make will be placed on a publicly available case file and will be summarised in reports that will be available on the Council's website. Your personal details will not be included in the reports.

You can track the progress of the application, including whether it is to be considered by Planning Committee and the final decision, using our online system.

Information is available to explain the planning process in more detail and this can be found at https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/About-the-application-process.aspx

Yours faithfully

Date: 7th November 2023

Dear Sir/Madam

This letter is to let you know about the following application that has been submitted:

Application Number : A/23/96226/MAJOR
Location : Land At Astley Park Way Worsley
Proposal : Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works

The application forms and plans can be viewed on our website two working days from the date of this letter at https://planning.wigan.gov.uk/online-applications/ .

We have a limited time to consider this application, so any comments you wish to make should be submitted by using the online system by **1st December 2023.**

If you decide to send comments, no acknowledgement will be sent and we are unable to enter into any correspondence. Please note any comments you make will be placed on a publicly available case file and will be summarised in reports that will be available on the Council's website. Your personal details will not be included in the reports.

You can track the progress of the application, including whether it is to be considered by Planning Committee and the final decision, using our online system.

Information is available to explain the planning process in more detail and this can be found at https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/About-the-application-process.aspx

Yours faithfully

Date 27th October 2023

Dear Sirs

Town and Country Planning Act 1990
Town and Country Planning (Development Management Procedure) (England) Order 2015
Application Number : A/23/96226/DCINV
Location : Land At Astley Park Way Worsley
Proposal : Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and, associated engineering, infrastructure and landscaping works

An initial examination of your submission has shown that it is not a valid planning application until the following requirements/details have been included.

1. Please provide a Construction Environment Management Plan.

2. Please provide a Topographical Survey.

3. Please provide an existing site plan.

4. Proposed site plan car parking numbers do not appear to match. Unit 2 parking 141 should be 143, Unit 1 parking 113 should be 112.

   Please ensure that all plans that show car parking have the correct number of spaces for the units.

5. Please provide elevations of Unit 4.

6. The following documents require splitting as over the 10mb threshold -
   Ecological Assessment
   Flood Risk Assessment
   PH1 desk Study

Please reply to:
Places Directorate: Growth and Housing, Development Management
Wigan Council, PO Box 100, Wigan WN1 3DS
E-mail: validation@wigan.gov.uk
www.wigan.gov.uk

7. No scale bars on tree constraints plans, tree protection plans, landscape cross sections. Please add scale bars to these drawings.

We will require all the information specified above to be submitted no later than 14 days from the date of this letter. We will check the application again once. If all the required information has been submitted the application will be deemed valid. If all the requested information has not been provided to the required standard within the specified time period, the application will be treated as withdrawn, the file destroyed, and your application fee minus an administration fee will be returned. No reminders will be sent. Details of the administration fee can be found on our website using the following link:

Apply for planning permission (wigan.gov.uk)

Please see the Council's planning validation check list for all validation requirements:

https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/About-the-application-process.aspx

If your application is to retain development that has already been carried out, this matter will be referred to the Planning Enforcement Section for further investigation and where necessary Enforcement proceedings.

Please email or post any required details and quote the reference number (A/23/96226/DCINV) in any further correspondence in the matter.

Payment

You can pay for all your Planning and Building Control Fees on the Council's website at the following link:

https://www.wigan.gov.uk/Pay-for-it/PayCouncilBill.aspx

Yours faithfully

Assistant Director Planning and Regeneration

Dear [redacted]

Thank you I will replace these documents. I note however that the updated planning statement is over 10MB so you will need to split or reduce this and resend it to us.

Regarding the time scales, we aim to check the application in approximately the couple of weeks

Kind regards

Development Management Team

Hi there

With respect to the above application which has been submitted via the Planning Portal, I attached an updated cover letter which is to replace the one which was originally submitted with the application.

In addition, we also enclose the updated Planning Statement which supersedes the previously submitted report and can be accessed here: https://we.tl/t-BoCNvifmK6 please can this also replace the previous report.

Please can you also provide timescales for validation?

Many thanks

CONSULTATION LETTER ISSUED TO LOCAL RESIDENTS

1

INTRODUCTION

PUBLIC

1 INTRODUCTION

1.1.1. This Planning and Heritage Statement has been prepared by WSP on behalf of Astley Care Unit ("the Applicant"). The purpose of this Statement is to assist Wigan Metropolitan Borough Council ("the Council") in the consideration of a full planning application for a development at land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan ("the site").

1.1.2. The description of the proposed development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

1.1.3. The site benefits from an allocation as a Primary Employment Area (ref: EM1A) within the Wigan Local Plan (WLP).

1.1.4. The application seeks to provide modern warehouses for industrial and manufacturing purposes within an employment site long established for the development sought by virtue of its Local Plan allocation that takes into account site constraints and as far as possible to mirror the development parameters approved under the outline planning permission (ref: A/15/81365/OUTMAJ).

1.1.5. This Statement sets out why planning permission should be granted for a major development that will deliver a high-quality logistics and warehousing scheme to accommodate flexible B2/B8 uses with ancillary office spaces, service yards, landscaping and cycle and parking areas to meet the current and changing needs of potential occupiers on this allocated Primary Employment Area within the Local Plan. The scheme, if approved, will deliver substantial socio-economic benefits to the area and Wigan Borough, including the creation of significant levels of employment.

1.2 THE APPLICANT

1.2.1. Astley Unit Trust is a subsidiary of PLP, a specialist UK logistics and industrial property business, founded in 2015. The full service platform sources, develops and manages prime UK logistics real estate on behalf of institutional capital partners, with in-house management expertise across all key capabilities including acquisitions, planning and development, leasing and asset/investment management. PLP's core business strategy is to develop prime, large scale logistics assets and add value throughout their investment life cycle.

1.2.2. The PLP platform is owned by Ivanhoé Cambridge, Peel L&P, Macquarie Asset Management, and its senior management team.

1.2.3. PLP currently manages two develop to core ventures, UK Logistics Venture (UKLV) 1 & 2. UKLV1's £500m of equity is fully committed, with 10m sq ft of prime logistics space either completed or under development, while UKLV2's £750 million of allocated capital is currently being deployed. On a completed basis AUM from these ventures is expected to reach approximately £2.5bn.

1.3 STRUCTURE OF THIS STATEMENT

1.3.1. This Statement is structured as follows:

- Section 2 sets out the site context and the planning history associated with the application site;

- Section 3 outlines the proposed development;
- Section 4 provides a Statement of Community Engagement, setting out details of the public engagement undertaken to date;
- Section 5 sets out the relevant planning policies at a local and national level;
- Section 6 provides the reasons why planning permission should be granted and
- Section 7 provides a Heritage Statement assessing the impacts of the proposals on nearby listed buildings and heritage assets;
- Section 8 sets out suggested S106 Heads of Terms; and
- Section 9 provides the conclusions and the overall planning balance.

2 SITE CONTEXT

2.1.1. The site is greenfield land allocated as a Primary Employment Area in the WLP and is located within the area known as Astley Business Park within the Borough of Wigan, situated towards the eastern part of the Borough. The site is also located to the north of the East Lancashire Road (A580).

2.1.2. The site (as identified in **Figure 2-1** below) is an irregularly shaped parcel of land. The site largely comprises approx. 12.71ha of land primarily used as agricultural fields used for grazing, separated by hedgerows and a number of trees. A Site Location Plan can be found at **Appendix A**.

Figure 2-1 - Site Location Boundary, Astley (Google Earth, 2023).

2.1.3. The site broadly falls from northeast to southwest with levels ranging between c.47m AOD and c.38m AOD across the site.

2.1.4. There are areas of more dense vegetation in the south-west of the site. The site also features a partly constructed internal access road present in the centre of the site as enabling works to serve future development.

2.1.5. A small ditch network passes through the centre of the site, falling in a south westerly direction, before outfalling into a culvert. This ditch network runs parallel to a public footpath running in an east-west direction through the centre of the site, with a perpendicular branch connecting the footpath the roads to the north (Garrett Lane) and south (Chaddock Lane). Attenuation basis are present within the south-western part of the site and to the east of the site access road.

2.1.6. The northern boundary of the site is demarcated by Garrett Lane which extends east to west. On the northern side of Garrett Lane, there is outline planning permission for residential development for up to 600 dwellings (ref: A/13/77906 MAJ OUTLINE) which is currently under construction.

2.1.7. Directly towards the south of the site, adjacent to the boundary is the Applewood Farm public house which benefits from access from the internal access road (Astley Park Way) which leads onto

Chaddock Lane. Towards the south and south-western boundary and beyond are existing established industrial and warehouse uses. As such, the surrounding land uses are of predominantly mixed industrial and residential in nature with a leisure use (the public house) to the south-west and Garrett Primary school located towards the north-western boundary.

2.2 PLANNING DESIGNATIONS

2.2.1. The site is allocated for B1, B2 and B8 uses under Policy EM1A 'Primary Employment Areas' within the saved policies of the Wigan Replacement Unitary Development Plan (2006).

2.2.2. The local plan policies map is shown in **Figure 2-2** below, with the extent of the employment allocation shown in light purple.

2.2.3. The entire site is located within Flood zone 1.

2.2.4. The site is not within a conservation area and does not contain any listed buildings.

Figure 2-2 - Extract from online proposals map (Wigan.gov.uk, 2023)

2.3 PLANNING HISTORY

2.3.1. In terms of the site's planning history, **Table 2-1** below outlines the most relevant planning applications undertaken using the Council's planning portal, however it should be noted that the site has an extensive planning history extending back over 20 years.

2.3.2. The most pertinent planning history to this application is the permission for major mixed employment and residential development which was granted in 2017 (ref: A/15/81365/OUTMAJ). The residential elements of this consent have been implemented following approval of reserved matters (refs: A/17/83910/RMMAJ and A/19/87155/RMMAJ), however the employment element of the outline consent was not implemented within the required timeframe and has thus expired.

Table 2-1 – Relevant Planning History

Planning Reference	Description	Decision Date	Status
A/15/81365/OUTMAJ	Outline application for a mixed use development comprising up to 28,000 SQM of employment floor space (use classes B1, B2 and B8), up to 165 dwellings, land for community use, open space, landscaping and association infrastructure (all matters reserved except employment access from Chaddock Lane; residential access from Garrett Hall Road and Garrett Lane)	27 February 2017	Approved
A/12/76732	Application to extend time limit for implementation of planning permission A/08/72144 - To vary condition 2 of planning approval A/06/67659 to accord with revised master plan and site access arrangement to outline application for an employment park comprising up to 31,500 square metres of class B1, B2 and B8 uses (All matters reserved except access).	13 December 2012	Approved

3 STATEMENT OF COMMUNITY INVOLVEMENT

3.1 LEGISLATION AND POLICY

3.1.1. The importance of pre-application consultation and community engagement are emphasised in the following:

- Community Involvement in Planning: The Government's Objectives (2004);
- Localism Act (2011);
- National Planning Policy Framework (NPPF) (2023); and
- Wigan Council's Statement of Community Involvement (SCI) (2021).

3.1.2. Wigan's Statement of Community Involvement was adopted in July 2021. It sets out what the Councils are required to produce that sets out what consultation will take place with the community on Planning Policy documents and planning applications. The SCI states who the Council will consult with, when and how.

3.1.3. The SCI encourages applicants, developers and agents to consider '*involving the Community prior to planning application submission', emphasising that 'pre-submission consultation can offer many benefits*'.

3.1.4. Furthermore, the SCI recommends that such consultations should take place as early as possible in the design of the scheme, with developers expected to provide evidence of pre-application consultation thereafter.

3.2 CONSULTATION APPROACH

3.2.1. In accordance with Wigan's Statement of Community Involvement, the applicant has engaged with key stakeholders such as local residents and local Ward Councillors and has carried out a formal community engagement exercise.

3.2.2. The following consultation methods have been implemented for the proposals:

- Letters issued to local Ward Councillors for Tyldesley and Mosley Common ward (where the site is located) and Ward Members for Astley ward (as the site is adjacent to the ward boundary) including a site plan inviting them to a meeting should they wish to discuss the scheme in more detail;
- A letter drop (via Royal Mail) to residential addresses nearest to the site including neighbouring businesses (the letter can be found at **Appendix C**).

3.2.3. Comments were invited on the planning application proposal. The consultation was designed to allow the local community to view the proposals and share their feedback with the design team.

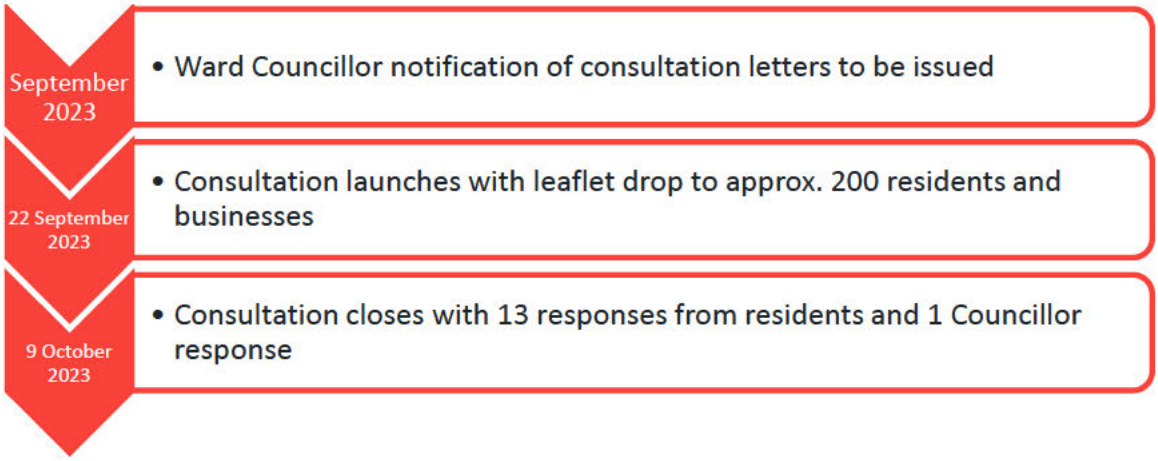
3.3 COUNCILLOR ENGAGEMENT

3.3.1. In September 2023, all Councillors representing Astley and Tyldesley and Mosley Common wards were consulted via email and provided with a copy of the proposed site plan.

3.3.2. Councillors were contacted in advance of a wider consultation with the local community commencing.

3.3.3. The correspondence offered the opportunity for a virtual meeting to be organised where members of the team would be on hand to explain the proposals in greater detail and also answer any questions.

3.4 CONSULTATION WITH THE LOCAL COMMUNITY



3.4.1. The consultation process for this application was designed to allow the local community to view the draft proposals and share their feedback with the team before the scheme is finalised and the application is submitted.

3.4.2. As a result, a letter, which provided details of the proposals was distributed to approximately 200 properties across the distribution area shown on **Figure 3-**1. Letters were posted on 22 September 2023 and contained an email address and phone line, presenting draft plans and further details of the scheme proposals. This approach and the distribution area was agreed in advance with planning officers at WMBC.

Figure 3-1 - Extent of properties consulted (Source: Google Maps)

3.5 TIMELINE OF KEY EVENTS

3.6 SUMMARY OF FEEDBACK RECEIVED

3.6.1. From the feedback received to the consultation exercise it was clear that impact on residential amenity and highways impact were key themes and the feedback received has helped influence the proposals.

3.6.2. Some specific comments are detailed below:

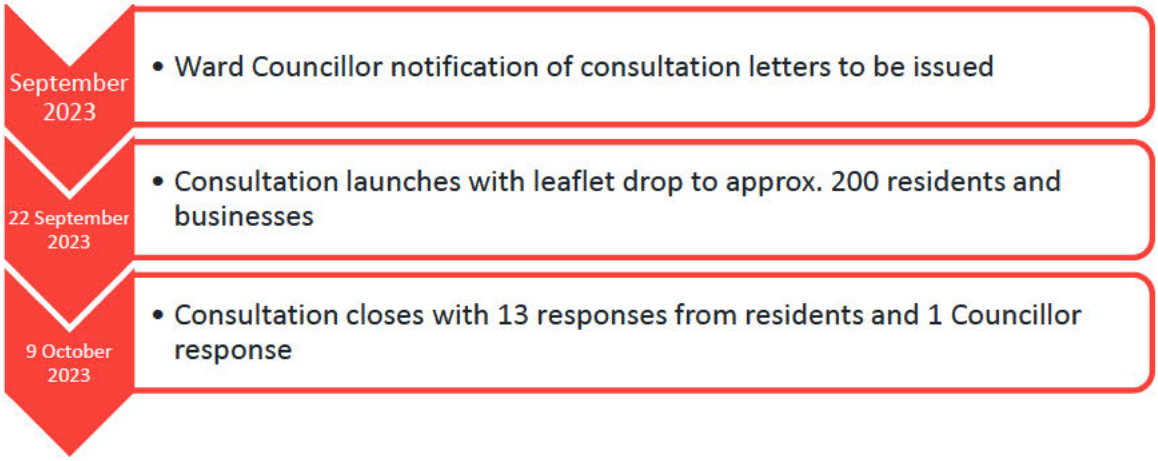
'There is wildlife living within the fields, we have recently seen owls flying around and there are numerous bird species too which nest in the bushes around the fields.

I am aware of the landscaping proposals however it will take years for this to develop to provide screening and noise barriers to the neighbouring residential properties.'

3.6.3. Other isolated comments related to the following:

- Potential impact on local highways network
- Loss of green space
- Impact on noise and amenity
- Impact on property value

3.6.4. The planning, design and technical assessment documents forming part of the application provide a robust assessment of the proposed development of all material technical consideration, in particular the impact of the scheme on residential amenity (discussed in detail in this Planning Statement) and in terms of highways impact (discussed in detail in the Transport Assessment)



3.7 ADDRESSING THE FEEDBACK

3.7.1. The following section outlines the response the design team have provided as a result of comments made during the consultation.

PUBLIC COMMENTS

Table 3-1 - Key issues received from the public

3.5 TIMELINE OF KEY EVENTS

3.6 SUMMARY OF FEEDBACK RECEIVED

3.6.1. From the feedback received to the consultation exercise it was clear that impact on residential amenity and highways impact were key themes and the feedback received has helped influence the proposals.

3.6.2. Some specific comments are detailed below:

'There is wildlife living within the fields, we have recently seen owls flying around and there are numerous bird species too which nest in the bushes around the fields.

I am aware of the landscaping proposals however it will take years for this to develop to provide screening and noise barriers to the neighbouring residential properties.'

3.6.3. Other isolated comments related to the following:

- Potential impact on local highways network
- Loss of green space
- Impact on noise and amenity
- Impact on property value

3.6.4. The planning, design and technical assessment documents forming part of the application provide a robust assessment of the proposed development of all material technical consideration, in particular the impact of the scheme on residential amenity (discussed in detail in this Planning Statement) and in terms of highways impact (discussed in detail in the Transport Assessment)

3.7 ADDRESSING THE FEEDBACK

3.7.1. The following section outlines the response the design team have provided as a result of comments made during the consultation.

PUBLIC COMMENTS

Table 3-1 - Key issues received from the public

Consultation Response	Design Team Response
Impact of operations on amenity and noise	Some responses raised the issue that the future employment uses could impact upon local amenity in noise terms. A noise impact assessment has been undertaken and includes baseline surveys of existing noise conditions, an assessment of the potential impacts and mitigation requirements to accord with best practice, guidance and relevant regulations. Noise levels from activity during both the day time and night time will be kept within acceptable limits due to the proposed landscaped bunds (which act as a noise barrier in their own right) and the fact that all service yards are facing internally (rather than externally towards the site boundaries), plus a range of site management measures that would be adopted once the development is operational.
Design, height and massing of the buildings	Some concerns were raised about the design and appearance of the buildings, specifically the heights of units 1 and 2 particularly compared with other developments built locally. Due to the sensitive design of the proposed building facades, choice of elevational materials and the hipped roof line it will lessen the visual impact. To lessen visual impact further, in addition to the sensitive design methods adopted in the building design, landscaping around the perimeter of the site is to be bolstered by native planting atop earth mounding to aid screening of the development. Landscaped areas are proposed across the site with landscaping features such as 3-4m high bund running mainly across the northern boundary and a 3m high land mound on the eastern boundary. A further section of bunding is provided to the west of the site, providing screening to the residential properties. The width of the landscaped bund to the west of the site will be approximately 25m.
Highways impacts	Some concerns were raised about impact on local highways network. A Transport Assessment and Travel Plan have been prepared for this proposal which looks at the highway network. The assessment has been undertaken using standard appraisal methods. The assessment shows that the scheme is located in an accessible position with good opportunities for access by sustainable modes (including walking, cycling and public transport). The assessment also shows that the proposal will not generate a significant level of traffic and will not have a material impact on highway operation or road safety. The Transport Assessment shows that the proposal meets both local and national policy requirements and will assist Wigan Council to meet its wider ambitions to reduce carbon generated by developments.

3.8 SUMMARY

3.8.1. In accordance with the Wigan's Statement of Community Involvement, this statement provides a chronology of the pre-application consultation that has been undertaken with the local community to assist in the shaping of this proposal.

3.8.2. The consultation indicated areas of concern for local residents, however, the consultation event has provided an opportunity to address local resident's concerns and direct them towards the planning application submission documents for further details.

3.8.3. In light of the above, the consultation approach for the proposal is in accordance with the Council's adopted SCI guidance, Localism Act and NPPF.

4 PROPOSED DEVELOPMENT

4.1 OVERVIEW

4.1.1. The description of development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

4.1.2. Full planning permission is sought for up to 32,826 sqm (GIA) (c. 353,336 sqft) split across four warehousing units, each with ancillary floorsapce. The different warehouses will range in size and will be flexible in order to offer B2/B8 use with some ancillary office and reception areas.

4.1.3. The Proposed Site Plan can be found at **Appendix B** with full details of the proposed design and access arrangements contained within the supporting Design and Access Statement.

4.2 LAYOUT, SCALE AND MASSING

4.2.1. The proposals comprise four new warehousing/logistics buildings (referred to on the plans as 'Units 1-4') with contemporary ancillary office facilities to support the primary function of the units.

4.2.2. The buildings have been carefully positioned as far as practicable within the central part of the site, mindful of proposed landscaping corridors and away from the site boundary to offer space strong landscape buffers, as well as acoustic and visual barriers. The units are also 'internally facing' to ensure that service yards are all situated towards the centre of the site to provide further acoustic and visual mitigation.

4.2.3. The proposed development includes ancillary structures and enclosures such as security gatehouses to Units 1 and 2 and sprinkler pump house and tanks. Transformers and substations are also included within the designs which will feature GRP enclosures to soften their appearance and fencing to prevent unauthorised access.

4.2.4. The proposed layout has been worked up in detail in accordance with the Applicant's commercial requirements to provide modern, flexible and fit-for-purpose employment units with sufficient outdoor yard spaces, servicing and parking areas. The layout and proposed siting of the buildings provides a commercially attractive layout whilst ensuring that the site constraints have been appropriately considered.

4.2.5. The scale and massing of the buildings have been optimised in order to provide the most efficient layout. The scale and massing of the proposed development has been influenced by the site's surrounding context. The architect has sought to achieve this through using different materials to break down different elements of the building to soften the appearance and to better respond to the neighbouring uses.

4.2.6. The buildings will have a maximum height of 18.35m to the ridge and will not be overbearing within their context. The proposed size and height of the units is based on assessed current and future market needs and allows sufficient internal clearance for future occupiers.

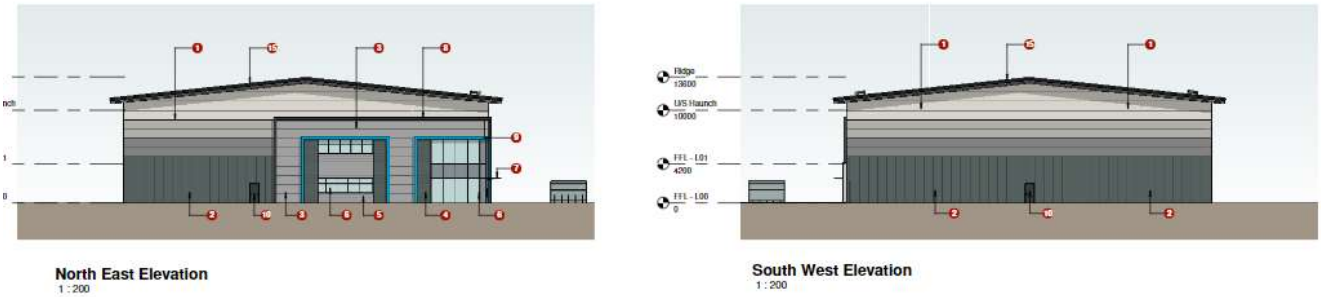


Figure 4-1 - Proposed Site Masterplan

4.3 APPEARANCE

4.3.1. The proposals reflect contemporary design principles in creating a high-quality B2/B8 buildings. The elevational treatment of the buildings provides a robust yet high-quality design utilising a contrasting colour palette to break down the elevations and soften the appearance of the buildings.

Figure 4-2 - Elevational drawings of proposed Unit 4

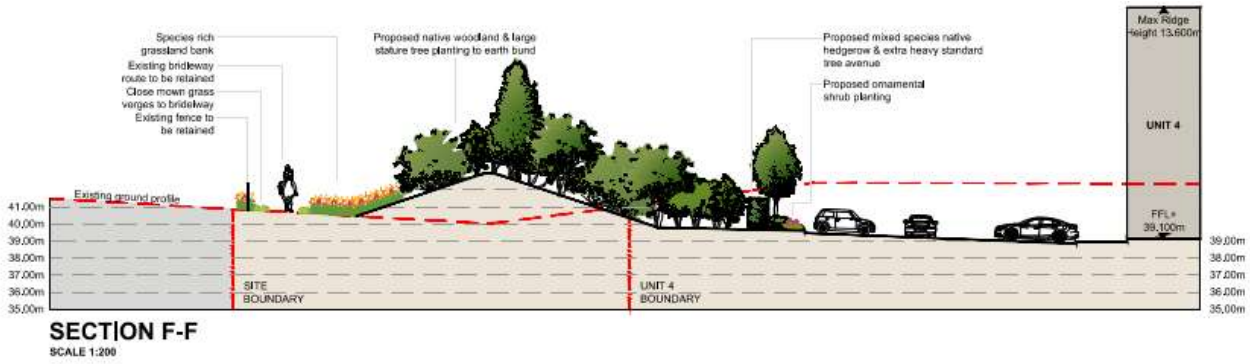
4.3.2. The majority of buildings will be clad in gradated horizontal trapezoidal profiled cladding finished in grey. The façade of the units will be broken up with profiled cladding.

4.3.3. The areas above the loading doors will feature darker grey smooth wall panels. Finishes have been chosen for their durability and colour fastness.

4.3.4. High speed roller shutters will be insulated composite panel and are featured in every single unit. Elevations are further broken up by PPC framed glazed entrance doors and windows for the potential reception parts of the units.

4.3.5. The appearance, materials and colours have been proposed to minimise the impact of the buildings from a visual perspective. The chosen colour palette of grey will be utilised to provide contrast to the cladding and ensure that the design is sympathetic to its surroundings.

4.4 LANDSCAPING



4.4.1. Significant areas of landscaping are proposed along all site boundaries.

4.4.2. As part of the proposals, a comprehensive landscape strategy has been prepared. Landscape areas are proposed across the site with landscaping features such as 3-4m high bund running mainly across the northern boundary and a 3m high land mound on the eastern boundary. A further section of bunding is provided to the west of the site, providing screening to the residential properties.

4.4.3. The landscaping proposals feature the planting of over 310 trees of multiple types and includes the planting of hedgerows, wildflower and amenity and translocated grassland.

4.4.4. Where bunds are proposed, as illustrated in the landscape section at **Figure 3-1** below, these will comprise a combination of landscaped mounds with planting atop to ensure an effective and durable visual barrier is provided to the north, east and west boundaries.

Figure 4-3 - Example of landscaped bund section

4.4.5. New areas of hedges, trees and low planting are proposed within the centre of the site and a tree-lined boulevard provides an attractive setting for the employment park.

4.4.6. The two attenuation ponds towards the southern boundary will be retained as part of the landscaping and drainage strategy and supplemented by a swale and bioretention zone on the western and northern boundary spanning in a north/south and west/east direction.

4.4.7. New areas of hedges, trees and low planting are proposed within the centre of the site and a treelined boulevard also forms part of the proposals.

4.4.8. As the landscape develops and matures it will help to assimilate the proposed development into its immediate site and surroundings, providing a high level of screening.

4.5 FOOTPATH DIVERSIONS

4.5.1. PROW Tyldesley No. 161 that runs along Tanhouse Avenue, is located to the west of the site. This footpath meets Tyldesley No. 159 which runs east-west across the site, before heading north, to its junction with Tyldesley No 161 and continues as Tyldesley No. 160 up to Garrett Lane.

4.5.2. The proposals include the provision of a section of footpath running along the back of houses on Westminster Drive and Tanhouse Avenue. This particular section is only a permissive path and therefore is not part of the wider PRoW diversion/improvement scheme. This section of footpath is not something that the applicant is obliged to deliver due to any rights or otherwise of the neighbours, however the applicant is willing to provide this additional section of footpath (with permissive rights) in the interests of being a good neighbour.

4.5.3. Footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 will be permanently diverted as part of the proposals with stopping up orders due to be submitted separately. Please see drawings no. 21714-HYD-XX-XX-SK-D-0001, 21714-HYD-XX-XX-SK-D-0002 and 21714-HYD-XX-XX-SK-D-0003 showing the extent of existing PRoW passing through the site.

4.6 ACCESS, CIRCULATION AND PARKING

4.6.1. In addition to the footpath diversions and improvements to the site permeability set out above, vehicular access to the site will be from Astley Park Way via Chaddock Lane.

4.6.2. The proposed development has carefully taken into account vehicle circulation within the site by clearly defining the internal service roads. Pedestrian and cycle access will be taken from the same proposed access road as the vehicular entry point, off Astley Park Way via Chaddock Lane.

4.6.3. Specific provision has been made for cyclists through the provision of safe, secure cycle storage in an easily visible and accessible.

4.6.4. In terms of parking provision, the proposal includes 327 car parking spaces (including provision of 17 disabled bays and 35 bays with Electric Vehicle Charging provision) and 73 HGV parking bays.

4.6.5. In addition to the above, 140 cycle parking spaces will be provided.

4.7 PRE-APPLICATION ADVICE

4.7.1. Given the prominence of the site and the potential scale of development, the applicants have, undertaken extensive pre-application discussions with Wigan Council across a period of around 12 months. Formal pre-application meetings have been held (via video conference) with [redacted] and [redacted] at the Council. These meetings were attended by members of the project team, including the applicant, architect and planning consultant.

4.7.2. The key discussion points at the meetings included:

- Master-planning of the site;
- Relationships between the application site and the surrounding residential development
- Height, massing and architecture;
- Landscape;

- Footpath diversions and upgrades;
- Public consultation and stakeholder engagement; and
- Technical constraints including noise, air quality and levels and ground contamination.

4.7.3. There is clear officer support for the development of the site for employment use as in doing so it will help realise the Council's long-held aspiration for this Primary Employment Area. The feedback received has been valuable and has positively shaped the current scheme which fit with the ambitions of Wigan's Core Strategy Local Plan and Unitary Development Plan.

5 PLANNING POLICY

5.1.1. Section 38(6) of the Planning and Compulsory Purchase Act 2004 states that applications for planning permission must be determined in accordance with the development plan, unless material considerations indicate otherwise.

5.1.2. The adopted Development Plan for Wigan Borough Council mainly comprises:

- The Wigan Core Strategy Local Plan (adopted September 2013); and
- Saved Policies Wigan Unitary Development Plan (adopted April 2006).

5.1.3. The National Planning Policy Framework (NPPF) (September 2023) is also a material consideration for development management purposes.

5.1.4. This chapter sets out the relevant planning policies and guidance contained within the NPPF and Local Plan Core Strategy. These are then appraised in subsequent chapters.

5.2 NATIONAL PLANNING POLICY FRAMEWORK

5.2.1. The National Planning Policy Framework (NPPF) was updated on 5 September 2023 and is a key material consideration in the determination of planning applications.

Achieving Sustainable Development

5.2.2. Sustainable Development means meeting the needs of the present without compromising the ability of future generations to meet their own needs (paragraph 8). The planning system has three overarching objectives in achieving sustainable development: economic, social and environmental.

5.2.3. Planning should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area (paragraph 9).

5.2.4. At the heart of the NPPF is the 'presumption in favour of sustainable development' ("the presumption") set out at paragraph 11, which establishes the planning principles in pursuing sustainable development in a positive way. Where there are no relevant development plan policies, or the policies which are most important for determining the application are out-of-date, permission should be granted unless 'any adverse impacts of doing so would significantly and demonstrably outweigh the benefits'. This includes where a local planning authority ('LPA') cannot demonstrate a five-year supply of deliverable housing sites or where the Housing Delivery Test has been failed and is referred to as the 'titled balance'.

Plan Making

5.2.5. Paragraph 23 states strategic policies should provide a clear strategy for bringing sufficient land forward, and at a sufficient rate, to address objectively assessed needs over the plan period, in line with the presumption.

Building a strong, competitive economy

5.2.6. Paragraph 81 encourages a strong, competitive economy where: "Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken

should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential."

Promoting Sustainable Transport

5.2.7. Paragraph 104 requires transport issues to be considered from the earliest stages of development proposals, so that the potential impacts on transport networks can be addressed; opportunities from existing or proposed transport infrastructure, technology and usage are realised; opportunities to promote walking, cycling and public transport use are identified and pursued; the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account; and patterns of movement, streets, parking and other transport considerations are integral to the design of schemes and contribute to making high quality places.

5.2.8. Paragraph 111 makes clear that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.

Making effective use of land

5.2.9. Paragraph 119 states development decisions should give substantial weight to the value of using suitable brownfield land for identified needs, and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land.

Achieving Well Designed Places

5.2.10. Paragraph 126 stresses the importance of planning positively for 'the creation of high-quality buildings and places.

5.2.11. Paragraph 128 ensures that developments will function well and add to the quality of the area; are visually attractive as a result of good architecture, layout and appropriate and effective landscaping; are sympathetic to local character and history, including the surrounding built environment and landscape setting; establish or maintain a strong sense of place; accommodate and sustain an appropriate amount and mix of development including greenspace and support local facilities and transport networks; and create places that are safe, inclusive and accessible and which promote health and wellbeing.

5.3 LOCAL DEVELOPMENT PLAN

5.3.1. The adopted Development Plan for the Borough comprises the Wigan Local Plan Core Strategy (2013) and the Saved Policies of the Wigan Unitary Development Plan (adopted April 2006).

WIGAN LOCAL PLAN CORE STRATEGY (2013)

5.3.2. **Policy SD1** sets out Wigan Council's position when it comes to and states that reflects the principles in the NPPF relating to the presumption in favour of sustainable development and those applications that accord with the development plan shall be approved without delay, unless material considerations indicate otherwise.

5.3.3. **Policy SP1 and SP2** states that development will be directed primarily to the east-west core of the borough, notably settlements such as Astley. Astley would be the focus amongst other settlements for development within the east of Wigan borough.

5.3.4. **Policy CP 5** states that the council will help to create sustainable economic growth by bringing forward a range of employment sites of the right quality in terms of location and supporting infrastructure to attract, maintain and grow businesses including but not limited to: manufacturing and engineering, logistics and digital information and communication technologies.

5.3.5. **Policy CP7** aims to ensure the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars, coaches and vans/lorries within new developments together with the promotion of the use of travel plans and appropriate provision of infrastructure for the charging of electric vehicles.

5.3.6. **Policy CP9** seeks access opportunities for walkers and cyclists; and measures that will reduce the extent of climate change or enable adaptation. It requires strategic landscaping on all new major development proposals, and seeks the protection of trees which are of value to amenity.

5.3.7. **Policy CP10** seeks to improve the built environment and make it a better place to live by ensuring that new development respects and acknowledges local character and identity; is integrated effectively with its surroundings; responds to climate change; is accessible for all and defines public/private spaces; incorporates high quality landscaping; reduces the risk of crime and anti-social behaviour; and has appropriate waste storage.

5.3.8. **Policy CP11** seeks to conserve and enhance the existing historic environment including the conservation and specific enhancement of heritage assets and their settings including listed buildings.

5.3.9. **Policy CP12** provides an emphasis on protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensure that as far as practicable, the habitats are part of linked networks and not fragmented. In addition, the policy requires the creation of wildlife habitats and features which are beneficial to geological conservation as part of new development.

5.3.10. **Policy CP13** aims to reduce the emission of carbon dioxide arising from new development with the aim to reduce impact of climate change on the environment, economy and quality of life.

5.3.11. It encourages all development to conform to the energy hierarchy by minimising the demand for energy before, maximising the efficiency of energy use before and implementing low-carbon dioxide and renewable energy technologies.

5.3.12. **Policy CP 16** states that development on greenfield sites should not increase the rate of surface water run-off with particular emphasis on ensuring that development in flood zones 2 and 3 and other areas vulnerable to surface water flooding should ensure that they follow a sequential approach in accordance with national planning policy.

5.3.13. **Policy CP17** seeks to help maintain, enhance and protect the existing environment for the benefit of the local population and wildlife by ensuring new development does not give rise to the pollution of any watercourse or groundwater.

WIGAN UNITARY DEVELOPMENT PLAN (ADOPTED APRIL 2006)

5.3.14. **Policy EM1A – Primary Employment Areas** allows development or changes of us to uses within Classes B1, B2 and B8 or other employment uses provided there would be no harm in terms of environmental, amenity, highway, road safety or other.

5.3.15. Astley Business Park at the time was referred to as Site EM1A 9 – Chaddock Lane and the proposed description was for mixed employment area with expansion land.

5.3.16. The policy also states that where all of this Primary Employment Area is to come forward, a masterplan or development brief is to be agreed with and approved by the Council.

5.3.17. **Table 4-1** below provides an appraisal of the proposed development in the context of the aforementioned development plan policies.

Table 4-1 – Wigan Replacement Unitary Development Plan and Local Plan policies

Policy	Analysis
Wigan Replacement Unitary Development Plan 2006	
EM1A Primary Employment Areas Within the Primary Employment Areas, development for, or changes of use to, uses within Classes B1, B2 and B8 or other employment uses will be permitted provided that there will be no unacceptable environmental, amenity, highway, road safety or other adverse impact. Other uses will only be permitted when:- (a) They will be small scale and complementary to the primary employment function of the Area or part thereof; or (b) They are on the fringe of the Primary Employment Area and it can be demonstrated that it will improve the physical relationship between the employment uses and adjacent uses, and it will not result in any greater constraint on the development and use of the remaining Employment Area for employment uses. Where all, or a substantial part of a Primary Employment Area is proposed for development or it is substantially undeveloped, a masterplan or development brief shall be agreed with, and approved by, the Council. Development shall accord substantially with the approved masterplan.	The proposed development seeks permission for mixed B2 and B8 development on the Astley Business Park allocation. The application is submitted with a detailed masterplan for the whole site showing proposed sitting of the employment units. The proposed development therefore clearly accords with Saved Policy EM1A and accordingly the principle of development is acceptable.
Wigan Local Plan Core Strategy, September 2013	
Policy SP1 In the east of the borough development will be focused on Leigh, Atherton, Tyldesley and Astley, including their town centres, and at broad locations for new development east of Atherton and between Tyldesley, Astley and Mosley Common.	The development of the site would form the natural infill or missing jigsaw piece which complements the recently developed residential site to the north known as Garrett Hall which is allocated for up to 600 dwellings.

Policy CP5 Help create sustainable economic growth; boost our economic performance and profile; and provide a wider range of job opportunities, by: 1. Bringing forward a range of employment sites of the right quality in terms of location, accommodation provision and supporting infrastructure, to attract, maintain and grow businesses, especially within the east-west core of the borough. The range of sites will focus on providing opportunities for the following key employment sectors in particular *1. Manufacturing and engineering, including food and drink processing* *2. Logistics / distribution* *3. Digital information and communications technology* *4. Creative/digital/new media* *5. Financial and professional services* *6. Environmental technologies* *7. Construction sector businesses.* 2. Against the qualitative factors set out above, making provision for approximately 200 hectares (gross) of employment land between 2011 and 2026, including reviewing sites allocated previously and undeveloped. 3. Safeguarding existing employment sites and buildings that are capable of continuing to meet the needs of employment uses and for which there is likely to be sufficient demand. 3. Encouraging a suitable supply of small, cost-effective premises for new business start-ups, including managed 'incubator' accommodation.	The proposed development would deliver significant socio-economic benefits and assist in achieving the aspirations of the Local Plan to create new and diversified employment land use. Development of this site will also bring significant socio-economic benefits including the creation of temporary employment during the construction phase, full-time employment once operational and additional expenditure in the local economy once operational. In addition to the above, the development of the site coincides with planning policy by delivering an allocated employment site and therefore reduces the need for additional or non-allocated employment sites to be released.
Policy CP7 Improve accessibility to key destinations for people and goods and connect people to opportunities both within and outside the borough by: Ensuring the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars, coaches and vans / lorries, including as part of new development	The application is supported by comprehensive Transport Assessment (TA). The conclusions of the TA demonstrate that there will not be severe impacts on the road network as a consequence of the development. The proposed development, in particular the footpath diversion and improvement workswill improve the walking and cycling environment for both local residents and future employees of the site.

Promoting the use of travel plans and requiring them to be produced and implemented for appropriate development. Supporting the appropriate provision of infrastructure for the charging of electric vehicles.	
Policy CP9 Improve the natural environments and open spaces within and between our towns and other settlements - our strategic landscape and green infrastructure - for the benefit of people and wildlife, and help make the borough a better place to live and visit and for businesses to locate and thrive, by: Identifying appropriate green areas to store flood waters away from homes, businesses and community buildings. Incorporating measures that will help to reduce the extent of climate change and/or adapt to a changing climate. Requiring key strategic landscaping on all new major development proposals and incorporating new green infrastructure in larger areas of new development, to help secure regeneration and/or economic development. Protecting trees and woodlands of value to amenity.	A robust landscape strategy is included as part of the proposals. The scale and nature of the built development proposed and the existing surroundings of the site were important factors in the landscape design approach which features a scheme that respects the character of the adjoining local landscape, enhances the ecology of the site and provides a stimulating, coherent and well-structured landscape and resulting in a positive setting for the development. Ornamental species of planting are proposed around the building envelope, along key access routes and within prominent locations adjacent to pedestrian paths. The proposed landscape for the site has been designed primarily to provide screening of the commercial units, to improve local biodiversity and ultimately for the vegetation to successfully establish.
Policy CP10 Improve the built environment of the borough and help make it a better place to live, visit and for businesses to locate and thrive by ensuring that, as appropriate, new development: Respects and acknowledges the character and identity of the borough and its locality, in terms of the materials, siting, size, scale and details used. Is integrated effectively with its surroundings and helps to create attractive places. Meets established standards for design. Includes measures to minimise the impact of and adapt to climate change and conserve natural resources and meets established national standards for sustainability and national carbon reduction targets	The proposed layout has been worked up in detail in accordance with the Applicant's needs to provide modern, flexible and fit-for-purpose employment units with sufficient outdoor yard spaces, servicing and parking areas. The layout and proposed siting of the buildings provides a commercially attractive layout whilst ensuring that the site constraints have been appropriately considered. The scale and massing of the buildings have been optimised in order to provide the most efficient layout. The scale and massing of the proposed development has been influenced by the site's surrounding context. The architect has sought to achieve this through using different materials to break down different elements of the building to better respond to the neighbouring properties.

Incorporates high quality landscaping. Is designed and uses materials that facilitate easy maintenance. Is designed to reduce the risk of crime and anti-social behaviour. Can be well serviced, including making provision for waste storage and collection.	The proposals reflect contemporary design principles in creating a high-quality, flexibleB2/B8 buildings. The elevational treatment of the buildings provides a robust yet high-quality design utilising a contrasting colour palette to break down the elevations and soften the appearance of the buildings. The appearance, materials and colours have been proposed to minimise the impact of the buildings from a visual perspective. The chosen colour palette of grey will be utilised to provide contrast to the cladding and ensure that the design is sympathetic to its surroundings.
Policy CP11 Seeks to conserve and enhance the existing historic environment including the conservation and specific enhancement of heritage assets and their settings including listed buildings.	A Heritage Statement is included within Section 5 of this report and assesses the significance of nearby heritage assets and also assesses the impacts on the significance of these assets as a result of the proposed development. The assessment concludes that the proposal accords with Policy CP11 and will not result in any harm to the heritage assets in the vicinity of the site.
Policy CP12 Help wildlife to prosper and safeguard important geological features by: Protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensuring, as far as practicable, that habitats are part of linked networks and not fragmented. 6. Requiring reasonable provision to be made for wildlife habitats and features beneficial to geological conservation as part of new development. Taking account of the impact of climate change in the enhancement of existing and the creation of new wildlife habitats	No irreplaceable habitats will be lost. Appropriate and commensurate mitigation will be imposed in respect of protected species. Mitigation, in particular a Construction Environmental Management Plan, will protect retained ecological features and protected sites during construction.
Policy CP13 Reduce the emissions of carbon dioxide arising from new development and help reduce the impacts of climate change on our environment, economy and quality of life by:	The planning application is accompanied by a Energy Statement, which sets out how the proposed development is intended to be designed to aid carbon reduction and climate change resilience. The proposals include a number of measures which can have significant impacts in CO2

1. Encouraging all development, where relevant, to conform to the energy hierarchy by: 1. minimising the demand for energy, before 2. maximising the efficiency of energy use, before 3. implementing low-carbon dioxide and renewable energy technologies. 2. Encouraging those proposing residential development of 10 units or more and/or non-residential development of more than 700 square metres to produce and submit a carbon reduction strategy setting out how the development will incorporate or make provision for, subject to viability, decentralised, renewable or low carbon energy sources to reduce the carbon dioxide emissions of energy use by at least 15%. 3. Encouraging new development to be designed, orientated and constructed so that it can maximise energy efficiency, reduce reliance on fossil fuel energy and take advantage of opportunities for renewable or low carbon dioxide technologies. 4. Encouraging reasonable improvements to be made to the energy performance of the existing building when an extension or other change to a building is proposed	reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.
Policy CP 16 Reduce the risk of flooding from all sources, notably in our flood zones 3 and 2, our critical drainage areas, and other areas vulnerable to surface water flooding, including locations downstream by ensuring that development: 1. Follows a sequential approach in accordance with national planning policy. 2. Is supported by a detailed Flood Risk Assessment where appropriate. 3. Incorporates appropriate mitigation and/or management measures to achieve, where possible, a reduction in flood risk overall. Development on greenfield sites should not increase the rate of surface water run-off. On previously-developed land, a reduction of at least 30% will be sought, rising to a minimum of 50% in critical drainage areas.	The planning application is accompanied by a Flood Risk Assessment and Drainage Strategy. The proposed development will incorporate a comprehensive sustainable drainage system in accordance with policy, guidance and best practice.

1. Encouraging all development, where relevant, to conform to the energy hierarchy by: 1. minimising the demand for energy, before 2. maximising the efficiency of energy use, before 3. implementing low-carbon dioxide and renewable energy technologies. 2. Encouraging those proposing residential development of 10 units or more and/or non-residential development of more than 700 square metres to produce and submit a carbon reduction strategy setting out how the development will incorporate or make provision for, subject to viability, decentralised, renewable or low carbon energy sources to reduce the carbon dioxide emissions of energy use by at least 15%. 3. Encouraging new development to be designed, orientated and constructed so that it can maximise energy efficiency, reduce reliance on fossil fuel energy and take advantage of opportunities for renewable or low carbon dioxide technologies. 4. Encouraging reasonable improvements to be made to the energy performance of the existing building when an extension or other change to a building is proposed	reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.
Policy CP 16 Reduce the risk of flooding from all sources, notably in our flood zones 3 and 2, our critical drainage areas, and other areas vulnerable to surface water flooding, including locations downstream by ensuring that development: 1. Follows a sequential approach in accordance with national planning policy. 2. Is supported by a detailed Flood Risk Assessment where appropriate. 3. Incorporates appropriate mitigation and/or management measures to achieve, where possible, a reduction in flood risk overall. Development on greenfield sites should not increase the rate of surface water run-off. On previously-developed land, a reduction of at least 30% will be sought, rising to a minimum of 50% in critical drainage areas.	The planning application is accompanied by a Flood Risk Assessment and Drainage Strategy. The proposed development will incorporate a comprehensive sustainable drainage system in accordance with policy, guidance and best practice.

Policy CP 17 Maintain, enhance and protect our environment for the benefit of people and wildlife, and make the borough a better place for people to live and businesses to locate and thrive, by: Tackling land contamination and land stability issues, primarily on sites affected by past industrial uses and coal mining activities, by promoting the appropriate re-use of sites, supporting the identification of contamination and stability issues and requiring appropriate remediation. Managing air quality, particularly in our Air Quality Management Areas, including by minimising the air pollution (and carbon dioxide emissions) likely to arise from new development. Ensuring that new development does not give rise to the pollution of any watercourse, groundwater or mossland or result in the transfer of contaminated run-off to surface water sewers. Ensuring that new development is planned and designed so that it does not have an unacceptable adverse impact on amenity and quality of life and/or that it will not itself be impacted upon in such a way by existing uses or activities in the area.	Subject to the adoption of the recommendations set out in the suite of ecology reports and a Construction Environmental Management Plan, which can be secured via planning condition, the proposal will not result in any adverse impacts on the receptors listed in the policy. As demonstrated in the Air Quality Assessment, Drainage Strategy and Phase 2 Site Investigation, the proposals will also not give rise to any adverse air quality, contamination or drainage issues subject to appropriate mitigation being implemented, which can be secured via planning condition. Finally, for the reasons given in response to Policies CP9 – CP13, the proposals will not result in any unacceptable adverse impact on amenity and quality of life for existing residents, uses or activities in the surrounding area.

6 HERITAGE STATEMENT

6.1 INTRODUCTION

6.1.1. The application site does not lie within a conservation area however there are some listed buildings within the vicinity. A heritage assessment has, therefore, been conducted which concludes that the development will be carried out in a sensitive manner which will not be detrimental to the heritage assets.

6.1.2. This assessment has been carried out in the context of relevant statutory duties under Section 66 (1) of the Planning (Listed Buildings and Conservation Areas) Act 1990. These sections of the 1990 Act respectively require that, in determining development applications, special regard is given to the desirability of preserving the fabric and setting of listed buildings. In undertaking their consideration of the development proposals, the Council is required to ensure that any finding of harm is given considerable importance and weight in the decision-making process.

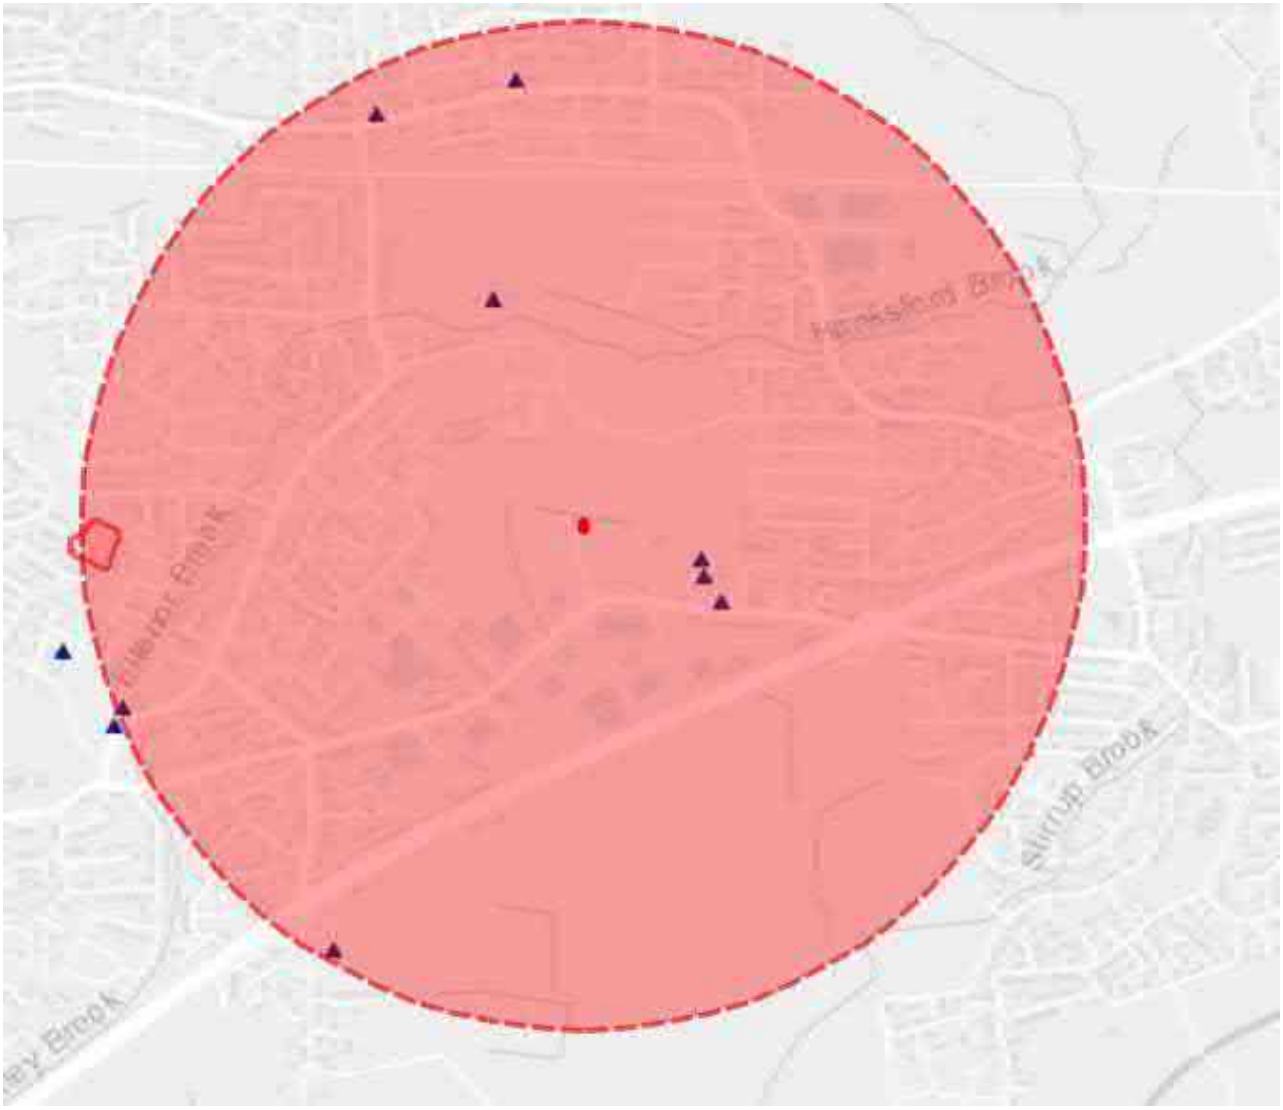
6.1.3. In addition, this assessment has been prepared in the context of national and local heritage planning policy. The assessment is presented to accord with the national policy requirement of NPPF paragraph 194, to describe the significance of heritage assets affected by the proposed development and evaluate the consequent impact of the proposed development.

6.1.4. The aim of this assessment is to demonstrate that the proposed development meets the requirements of local and national planning policy and relevant legislation.

6.1.5. The application site is located towards the south eastern extent of the main urban area of Astley and consists of a series of fields. The site lies adjacent to predominantly residential areas to the north and east, industrial development to the west. The relationship with the other areas is severed by Chaddock Lane which bounds the site to the south respectively. In this manner, the site is a pocket of contained fields.

6.2 IDENTIFICATION OF HERITAGE ASSETS

6.2.1. As with the majority of Greater Manchester towns, Wigan saw a rapid period of expansion during the Industrial Revolution, with associated building and infrastructure being developed. As such, there are a number of listed assets within the wider local area. However, the majority of these are concentrated close to the centre of Leigh and Wigan, some 5km and 13km to north west of the site, with a significantly smaller number and concentration of assets to be found close to the site or within the intervening space.



6.2.2. However, a number of listed assets are to be found closer to the site, as listed below and illustrated in **Figure 6-1**:

- Grade II listed Chaddock Hall Barn (LEN: 1163209) approx. 200m east of the site boundary;
- Grade II listed Chaddock Hall (LEN: 1356222) approx. 150m east of the site boundary;
- Grade II listed Chaddock Hall garden wall and stone gatepiers (LEN: 1068485) approx.. 150m east of the site boundary;
- Grade II listed Garett Hall (LEN: 1163348) approx.230m north of the site boundary;
- Grade II listed 109, Sale Lane (LEN: 1163421) approx. 630m north of the site boundary;
- Grade II listed 7 Sale Lane (LEN 1068448) approx. 680m north of the site boundary;

- Grade II listed Manor House Farmhouse (LEN 1068446) approx. 830m south west of the site boundary

6.2.3. Consideration of these assets and the scoping out of assets further from the site is considered appropriate. This is primarily due to the spatial and functional separation between the site and those assets. The assessment of the assets listed above will demonstrate that this approach is sufficient to understand the potential impact of the proposal on the significance of any assets, given the fact that these assets are closer to the site and similarly listed and have a closer, albeit limited, spatial, visual or functional relationship with the site than any of these other assets (there are no Grade I listed assets within at least one mile of the site).

Figure 6-1 - 1km radius from appeoximate centre of site. The blue triangles are listed assets (Historic England.org)

6.3 LEGISLATIVE AND POLICY CONTEXT

6.3.1. The purpose of this assessment is to demonstrate that the proposed residential development meets the requirements of local and national planning policy and relevant legislation.

Planning (Listed Buildings and Conservation Areas) Act 1990

6.3.2. The legislative requirements of the Planning (Listed Buildings and Conservation Areas) Act 1990 provide specific protection for buildings of special architectural or historic interest, over and above that provided by development management.

6.3.3. Section 66 of the 1990 Act requires that, when considering whether to grant planning permission for development which affects a listed building, the local planning authority, *"shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses".*

National Planning Policy Framework (2023)

6.3.4. Section 16 (paragraphs 189 to 208) of the NPPF is specific to conserving and enhancing the historic environment.

6.3.5. Paragraph 197 states:

"In determining planning applications, local planning authorities should take account of: - the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation".

6.3.6. Paragraph 199 states:

"When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation".

6.3.7. Significance is defined as:

"The value of a heritage asset to this and future generations because of its heritage interest. The interest may be archaeological, architectural, artistic or historic. Significance derives not only from a heritage asset's physical presence, but also from its setting".

6.3.8. The setting of a heritage asset is defined as:

"The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral".

6.3.9. In determining applications, the NPPF also advises that LPAs should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the asset's importance and no more than is sufficient to understand the potential impact of the proposal on their significance.

Historic England Guidance

6.3.10. Historic England is the Government's statutory adviser on the historic environment and its powers are set out in the National Heritage Act 1983.

6.3.11. Historic England provides guidance on a variety of topics. The guidance most pertinent to these development proposals is set out in three documents relating to significance, setting and development:

- Conservation Principles: Policy and Guidance for the Sustainable Management of the Historic Environment (2008);

- Historic Environment Good Practice Advice in Planning Note 2: Managing Significance in Decision-Taking in the Historic Environment (2015); and,
- Historic Environment Good Practice Advice in Planning Note 3: The Setting of Heritage Assets (2017).

6.3.12. Conservation Principles, Policy and Guidance (English Heritage 2008) sets out how the relative levels of significance can be measured:

- Exceptional: an asset important at national to international levels' including scheduled monuments, Grade I and II* listed buildings and World Heritage Sites.
- High: a designated asset important at regional level and also at national level, including Grade II listed buildings and conservation areas. Substantial harm should be exceptional.
- Medium: an undesignated asset important at a local to regional level, including local (non-statutory) listed buildings or those which make a positive contribution to the setting of a listed building or to a conservation area. May include less significant parts of listed buildings. Buildings and parts of structures in this category should be retained where possible, although there is usually scope for adaptation.
- Low: structure of feature is of very limited heritage value and note defined as a heritage asset. May include insignificant interventions to listed buildings. The removal or adaptation of structures in this category is usually acceptable where the work will enhance a related heritage asset.
- Negative: structure of feature that harms the value of a heritage asset. Wherever practicable, removal or negative features should be considered, taking account of setting and opportunities for enhancement.

6.3.13. The Setting of Heritage Assets, published 22 December 2017, gives general advice on understanding setting, and how it may contribute to the significance of heritage assets and allow that significance to be appreciated, as well as advice on how views contribute to setting.

6.3.14. The document sets out the broad approach to assessment recommended by Historic England, in terms of the significance of any heritage assets including development affecting the setting:

Step 1: *Identify which heritage assets and their settings are affected*

Step 2: *Assess the degree to which these settings make a contribution to the significance of the heritage asset(s) or allow significance to be appreciated*

Step 3: *Assess the effects of the proposed development, whether beneficial or harmful, on that significance or on the ability to appreciate it*

Step 4: *Explore ways to maximise enhancement and avoid or minimise harm*

Step 5: *Make and document the decision and monitor outcomes".*

Wigan Core Strategy Local Plan

6.3.15. Policy CP11 sets out that the council will protect the borough's heritage by conserving, enhancing and promoting key heritage assets and non-statutory heritage assets of local interest; prioritising the conservation of heritage assets at risk from decay and use heritage assets positively to strengthen identity and image.

6.3.16. Objective BEL 1 aims to conserve and enhance the borough's built heritage.

Assessing Significance

6.3.17. This section identifies the assets and provides details on their significance, taking account of the NPPF and Historic England Guidance. It then assesses the impact on the significance of these assets as a result of the proposed development.

Chaddock Hall Barn

6.3.18. Chaddock Hall Barn is a Grade II listed, 17th century farm building. It is listed due to its age, stone dressings and carved rich coat of arms.

6.3.19. The barn at Chaddock Hall is in such poor condition that its future must be uncertain although it is subject to a planning application for conversion to dwellings.

Chaddock Hall

6.3.20. Was an altered 17-19th Century house with brick and timber- framing most of which was rendered over.

6.3.21. Chaddock Hall was subject to a serious arson attack in 2014 and the interior was completely destroyed leaving only the walls standing and in early 2017 the remains of the hall collapsed completely with any possibility of restoration highly unlikely.

Chaddock Hall Gardell Wall and Gapiers

6.3.22. A Garden wall and stone gatepiers at Chaddock Hall G.V. II Walls and gate piers. English garden wall bond brick with stone dressings. Quadrangular in plan with gates to south. The walls feature round-topped copings and occasional buttressing piers. The adjoining summer house is of c.1905. Tall gate piers with raised panels in each face and moulded bases, collars and capitals. Cast-iron gates.

Garett Hall

6.3.23. Garrett Hall is a grade II listed Farmhouse of a Timber-framed structure dating from the 17th century which has been largely rebuilt in brick. Timber posts are visible at the rear which has a continuous outshot, and a projecting brick chimney stack. Formerly the house of the Tyldesley family.

6.4 IMPACT ON SIGNIFICANCE

6.4.1. An assessment of significance is a requirement for any application that could potentially affect a heritage asset. Based upon the identification, description, significance and setting of the heritage assets coupled with an understanding of the development proposals as set out earlier, this section assesses the impact of the proposed development on the significance of the heritage assets, in accordance with paragraph 194 of the NPPF.

6.4.2. The following concludes that the proposal will not be detrimental to the character or setting of the listed and non-designated assets and thus their significances will be unaffected.

Chaddock Hall Barn

6.4.3. The proposed development site is at least 200m from Chaddock Hall Barn, with a residential area in the intervening space.

6.4.4. The significance of the listed church derives largely from its age, architectural interest and from its steeple that is visible in views to the church and therefore can potentially be susceptible to visual hanges over a wide area. However, the church has long been experienced within an urban setting

Chaddock Hall Garden Wall and Gapiers

6.4.5. The proposed development site is at least 150m from Chaddock Hall Garden Wall and Gaspiers, with a residential area in the intervening space.

6.4.6. The significance of the listed garden wall derives largely from architectural interest. However, the wall has long been experienced within an urban setting.

6.4.7. On this basis, combined with the distance of the application site and the residential areas separating the site and heritage features, there will be no harm to the significance of the building.

6.4.8. **Garett Hall**

6.4.9. The proposed development site is at least 230m from Garett Hall, with a residential area in the intervening space.

6.4.10. Whilst glimpses of the hall may be visible from parts of the site, these will be largely screened by intervening residential uses, vegetation and the have undergone a wide variety and ever-changing range of uses since their creation to reflect the changes in population, commerce, technology and policy. On this basis, combined with the distance of the application site and the residential areas separating the site and heritage features, there will be no harm to the significance of the building.

6.5 CONCLUSION

6.5.1. It has been demonstrated above that the development of the application site for housing won't result in any adverse impacts upon any nearby listed or non-designated heritage assets. This is also the conclusion reached in the HEA that was commissioned by the Council.

6.5.2. Based on the above assessment, the proposal accords with Core Strategy Local Plan Policy CP 11 and the NPPF, as it will not result in any harm to the listed and non-designated heritage assets in the vicinity of the site.

7 OTHER MATERIAL CONSIDERATIONS

7.1 OVERVIEW

7.1.1. This chapter focusses on appraising the proposed development in the context of technical planning policies and guidance contained in the Development Plan and NPPF.

7.1.2. Policy CP10 of the Core Spatial Strategy states that all development will be required to adhere to high standards of design. Development should have a positive impact and will be expected to respond to scale, density, massing, height, landscape of surrounding buildings and areas in general whilst respecting existing context.

7.2 DESIGN AND SUSTAINABILITY

7.2.1. The NPPF also provides guidance on development and ensures that the design of development incorporates the principles of sustainable development and the need to create better places in which to live and work. Paragraph 130 sets out several design criteria with the purpose being to ensure that design is of a high quality and appropriate for the area in which the development is located.

7.2.2. The proposed development has been designed in accordance with the above guidance;

- The layout, scale and appearance of the proposals have been developed to create a high quality and attractive scheme with integrates well with the wider suburban townscape;
- The elevational treatment has been carefully considered in the context of the site's current setting in order to create a contemporary and attractive appearance;
- The development includes soft landscaping and tree planting which seeks to enhance the sites boundaries;
- The development has been designed to respect and protect neighbouring residential amenity including the neighbours' amenity, identity and character of the area;
- The proposal provides easy access for future users who wish to arrive to by bicycle. The proposal itself incudes cycle parking provision; and
- The development is accessible to all with disabled bays provided.

7.2.3. As such, the design of the proposed development is in full accordance with Local Plan policy CP10 as well as paragraph 130 of the NPPF.

7.3 TREES AND LANDSCAPING

7.3.1. A tree survey prepared by BB Trees presents the findings of the survey and assessment of the quality of the existing trees on and adjacent to the site, based on their current condition and quality. The assessment includes impacts arising from the proposed development of the site on these trees.

7.3.2. Fifteen individual trees and nineteen groups were surveyed. Of which around 5 trees, 8 groups are on the site boundary.

7.3.3. The proposed development necessitates the removal of 7 trees and 6 groups within the site boundary in order to accommodate the building and facilitate the wider development.

7.3.4. Whilst the development involves the loss of trees, replanting is proposed which will result in a significant net gain of trees across the site.

7.3.5. The landscape strategy has been formulated specifically to strengthen the sites boundaries with additional tree planting and hedgerows. The strategy ensures that the buildings will be well screened from the public realm, particularly views from the adjacent existing residential estate and existing and proposed public rights of way. The area to the north of the site has been proposed to improve screening of units 1 & 2 from the adjacent housing while also offering ornamental/aesthetic value to pedestrians and workers in the proposed offices.

7.3.6. The application includes landscaping cross-section drawings to demonstrate how the proposed earth bund will function with fully developed native vegetation atop.

7.3.7. Up to 310 trees in addition to hedgerow planting will be introduced across the site and the site's boundary. Areas of ornamental shrub mix, and meadow will assist in creating a landscaped setting for the warehouse units.

7.3.8. The landscape strategy ensures that once trees and hedgerows are fully mature the building will be fully screened from the public realm and as such visually contained within the site. The landscape strategy is considered appropriate in order to offset the minor impact of the proposals on the wider landscape.

7.3.9. As a result of the above, the proposal delivers significant enhancements in terms of arboriculture landscaping and therefore accords with Local Plan Policy CP12 and paragraph 130 of the NPPF.

7.4 NOISE

7.4.1. A Noise Assessment prepared by Tetra Tech accompanies the submission. The noise report establishes the noise climate in the surrounding area and whether the proposed operations at the site, taken as a worst-case scenario, would give rise to any adverse impacts from a noise perspective.

7.4.2. The report provides a comprehensive overview of the proposal and the operations/plant which are likely to result in noise disturbances. The assessment has accounted for HGV movements, staff car parking activity and fixed pant associated with the development.

7.4.3. Predicted noise levels indicate that they will meet WHO noise intrusion criteria at the nearest sensitive receptors during both the daytime and night-time with windows open or closed. The assessment includes acoustic bunds and boundary fencing associated within neighbouring housing development within the model and concludes the impact on the nearest sensitive receptors will not be expected to have a 'significant adverse impact' on health or quality of life.

7.4.4. Noise levels derived from plant predicted to be equal to existing daytime and night-time background noise. During the construction phase of the development, noise levels at existing noise sensitive properties would be within BS 5228 fixed limit criteria.

7.4.5. In light of the above, the proposal will not result in an adverse impact in terms of noise and therefore the proposal is in full accordance with policy CP17 of the Local Plan and paragraph 185 of the NPPF.

7.5 AIR QUALITY

7.5.1. Tetra Tech have prepared an Air Quality Assessment which forms part of this submission. The assessment work has found that there will be no significant effects on air quality matters, including on ecological and human receptors.

7.5.2. An assessment was undertaken to quantify potential effects emanating from road traffic emissions and construction dust impacts which may arise from the development's operational and construction phases.

7.5.3. Site specific mitigation measures are proposed to deal with construction phase impacts on air quality. With these mitigation measures in places, effects from the construction phase are not predicted to be significant.

7.5.4. The assessment includes a study on the long-term effects associated with the proposed development in respect of Nitrogen Dioxide and Particular Matter associated with traffic. It is considered that modelled results are deemed to be negligible in terms of air quality impacts when combined with proposed mitigation such as those outlined within the Travel Plan.

7.5.5. The proposal will therefore not result in an adverse impact in terms of noise and therefore the proposal is in full accordance with policy CP17 of the Local Plan and paragraph 186 of the NPPF.

7.6 EXTERNAL LIGHTING

7.6.1. A Lighting Assessment undertaken by WSP accompanies the submission. The assessment sets out the proposed external lighting scheme and provides guidance in terms of good practice to ensure obtrusive lighting is reduced.

7.6.2. The lighting scheme is based on energy efficient LED luminaires and seeks to illuminate architectural features of both the buildings and the external landscaping scheme. The external lighting also takes into consideration both the level and uniformity of lighting required for security, CCTV operation, safe movement of visitors, staff and residents to the buildings/landscaping around the site.

7.6.3. The lighting strategy seeks to reduce lighting pollution through mitigation such as preventing upward light pollution through a combination of optimal mounting heights and by utilising low energy efficient LED lighting luminaires that limit glare. The layout and type of lighting used takes into consideration and limits any possible impact on the surrounding amenity and landscaped areas.

7.7 ECOLOGY AND BIODIVERSITY NET GAIN

7.7.1. A phase 1 preliminary ecological survey has been prepared by The Ecology Practice which supports this application. The majority of the site was assessed as being a mixture of poo semi-improved grassland, semi-improved grassland and pockets of dense scrub with species-poor hedgerow.

7.7.2. The assessment included a bat survey, breeding bird survey and Great Crested Newt survey.

7.7.3. Great Crested Newt eDNA surveys returned negative results within the application site. Bat ground Level tree assessments determined that two trees had moderate potential for bat roost presence with other classed as low or negligible.

7.7.4. The breeding bird survey returned signs of breeding on site for singing dunnock and four song thrush.

7.7.5. Mitigation is proposed for both vegetation clearance to avoid impact on breeding birds and bats in the form of qualified licenced ecologist to visit the site 48 hours before clearance works to determine presence. In addition, mitigation proposals include the provision of bat and bird boxes across the site.

7.7.6. A Biodiversity Net Gain (BNG) assessment has been undertaken using the DEFRA Metric 4.0. The proposals would result in a net gain deficit of -10.95 Habitat Units (-17.43% and net gain in Hedgerow Units (+133.51%).

7.7.7. The proposal will not result in any harm to the negligible ecological value of the site or neighbouring habitats and actually delivers enhancements in the form of additional habitat creation as a result of tree planting and landscaping at the site.

7.7.8. The proposal delivers enhancements in terms of ecology and therefore accords with policies CP12 of the Local Plan and paragraph 180 of the NPPF.

7.7.9. The lighting strategy has been carefully generated to ensure the immediate environment has been protected. The development is therefore in accordance with Policy CP17 of the Wigan Core Strategy Local Plan.

7.8 HIGHWAYS, TRAFFIC AND TRANSPORT

7.8.1. In accordance with paragraph 111 of the Framework a Transport Assessment, prepared by Hydrock, has been submitted alongside the application. The application includes vehicle tracking diagrams to demonstrate safe ingress and egress of HGV and vehicles into the site and internal access road.

7.8.2. The assessment sets out that the site demonstrates a good level of locational sustainability being accessible by public transport, walking and cycling.

7.8.3. The assessment indicates that that the development has the potential to generate 112/133 morning and evening peak vehicles trips. The level of peak hour traffic is below DfT significance thresholds and the proposal will not lead to a severe impact to either the existing or the future forecast capacity on the local highway network.

7.8.4. In terms of parking provision, the proposal includes 328 car parking spaces (including provision of 17 disabled bays) and 77 HGV parking bays. The proposal therefore accords with the Council's required standards for a B2/B8 use.

7.8.5. In addition to the above, 60 cycle parking spaces will be provided ensuring any future employees are able to cycle to work.

7.8.6. In light of the above, the development would not result in adverse impacts on the capacity or safe functioning of the highway as a result of the development and that the requirements of CP7 of the Local Plan and Paragraph 111 of the Framework would be met in full.

7.9 ENERGY AND SUSTAINABILITY

7.9.1. An energy statement has been prepared by CPW and is enclosed as part of this application. The statement has conducted an appraisal of the renewable and low carbon technology energy options to be employed at the site once operational in order to align with the requirements set out under paragraph 157 of the NPPF with regards to reducing energy consumption during the lifetime of the development.

7.9.2. The statement concludes that a number of measures are proposed which can have significant impacts in CO2 reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.

7.9.3. The proposals can therefore be considered to be in full accordance with policy CP13 of the Local Plan.

7.10 CRIME IMPACT

7.10.1. A Crime Impact Statement prepared by Design for Security confirms the proposed scheme will be safe and secure.

7.10.2. The statement outlines that currently the service yards of the industrial units will be well secured with a 2400mm high paladin fence, restricting access to these spaces. In addition, it is noted that the public footpath does not pass to closely to the industrial units and does not leave them vulnerable. The route of the footpath is generally linear and well overlooked.

7.10.3. The proposed industrial units are likely to be staffed at all times, reducing the potential for criminal and antisocial activity. There is only one vehicular access point into the site, allowing traffic entering the site to be monitored and restricted easily.

7.10.4. The footprints of the proposed buildings are relatively simple and contain few recesses that could provide concealment for offenders or those antisocially minded. Cycle stands are generally positioned where they can easily be seen from the building and access road, allowing for passive surveillance opportunities.

7.10.5. Car parking areas are generally positioned where they can be seen from the main entrance or the access roads.

7.10.6. The statement outlines a number of mitigation measures and enhancements in relation to boundaries, lighting, vehicular access arrangements, perimeter fencing and service yards which could be implemented across the site and unit itself to increase security. Where possible, these measures have been included within the design and will be implemented once the development is occupied.

7.10.7. In this respect, this scheme accords with paragraph 92 of the NPPF which highlights that development should create safe, inclusive and accessible places which promote health and well-being.

7.11 FLOOD RISK AND DRAINAGE

7.11.1. A Flood Risk Assessment (FRA) prepared by BE Design accompanies the application. It investigates the potential flood risk impacts of the proposed development and is considered proportionate to the degree of flood risk and to the scale, nature and location of the development.

7.11.2. The flood maps provided by the Environment Agency (EA) locate the site within Flood Zone 1, i.e. and defined as having an annual probability of fluvial flooding of less than 1 in 1000 in any year (<0.1%) and is classed as less vulnerable therefore development is appropriate.

7.11.3. The drainage strategy responds to the relevant policy and guidance and is based upon an assessment of the existing site connections, the FRA and site investigations.

7.11.4. Existing attenuation basins at the site feature as part of the wider landscape strategy and will assist with the management of water across the site. A new surface water drainage system will be constructed to convey runoff from the impermeable surfaces on the four building units including access road. The outline foul water drainage strategy is to connect to the existing foul drainage

network of the area. There would be very limited increase in the foul water discharge rates generated by the new development.

7.11.5. The above is considered an acceptable solution in relation to drainage and will ensure that the development does not create any additional flood risk issues for the local area.

7.11.6. The proposed drainage design and approach to flood risk mitigation therefore accords with policy CP16 of the Local Plan and paragraph 167 of the NPPF.

7.12 GROUND CONDITIONS

7.12.1. The application is accompanied by a Desk Study Risk Assessment (Phase 1 Site Investigation) and Due Diligence Report (Phase 2 Site Investigation), both prepared by Discovery Investigation. A Coal Mining Risk Assessment has also been undertaken for completeness.

7.12.2. The desk study provides an overview of the potential hazardous substances or conditions on or the near the site.

7.12.3. The assessment considers that there could be potential contaminants but these are typically associated with and considered to be representative of the site's former historical agricultural uses. The assessment sets out that it is considered there is a low-moderate to moderate risk of contamination and that further surveys should be undertaken.

7.12.4. The Phase 2 Site Investigation provides details of trial pits/ground samples taken in order to better assess the ground conditions and makes a series of recommendations, which can be secured via planning condition.

7.12.5. Subject to the undertaking of the recommendations set out in the forementioned technical documents, the development proposals accord with the requirements of paragraph 183 of the NPPF.

8 S106 HEADS OF TERMS

8.1.1. At the time of writing, based on feedback received during pre-application discussions with the Council, it is anticipated that any S106 Agreement associated with the application will be limited to the provision of a contribution towards the upgrade and re-validation of MOVA at the junction of A580/Chaddock Lane.

9 PLANNING BALANCE

9.1.1. This application seeks full planning permission for the development of a new employment site of up to 32,826 sqm (353,336 sqft) B2/B8 floorspace (including ancillary integral office space (Use Class E(g)) with associated car parking and service yard; new internal access road; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping at Land at Astley Park Way (off Chaddock Lane).

9.1.2. The site benefits from an allocation as a Primary Employment Area (Ref. EM1A) within the Wigan Local Plan and the proposals will help meet the current and changing needs of potential occupiers on this allocated Primary Employment Area within the Local Plan.

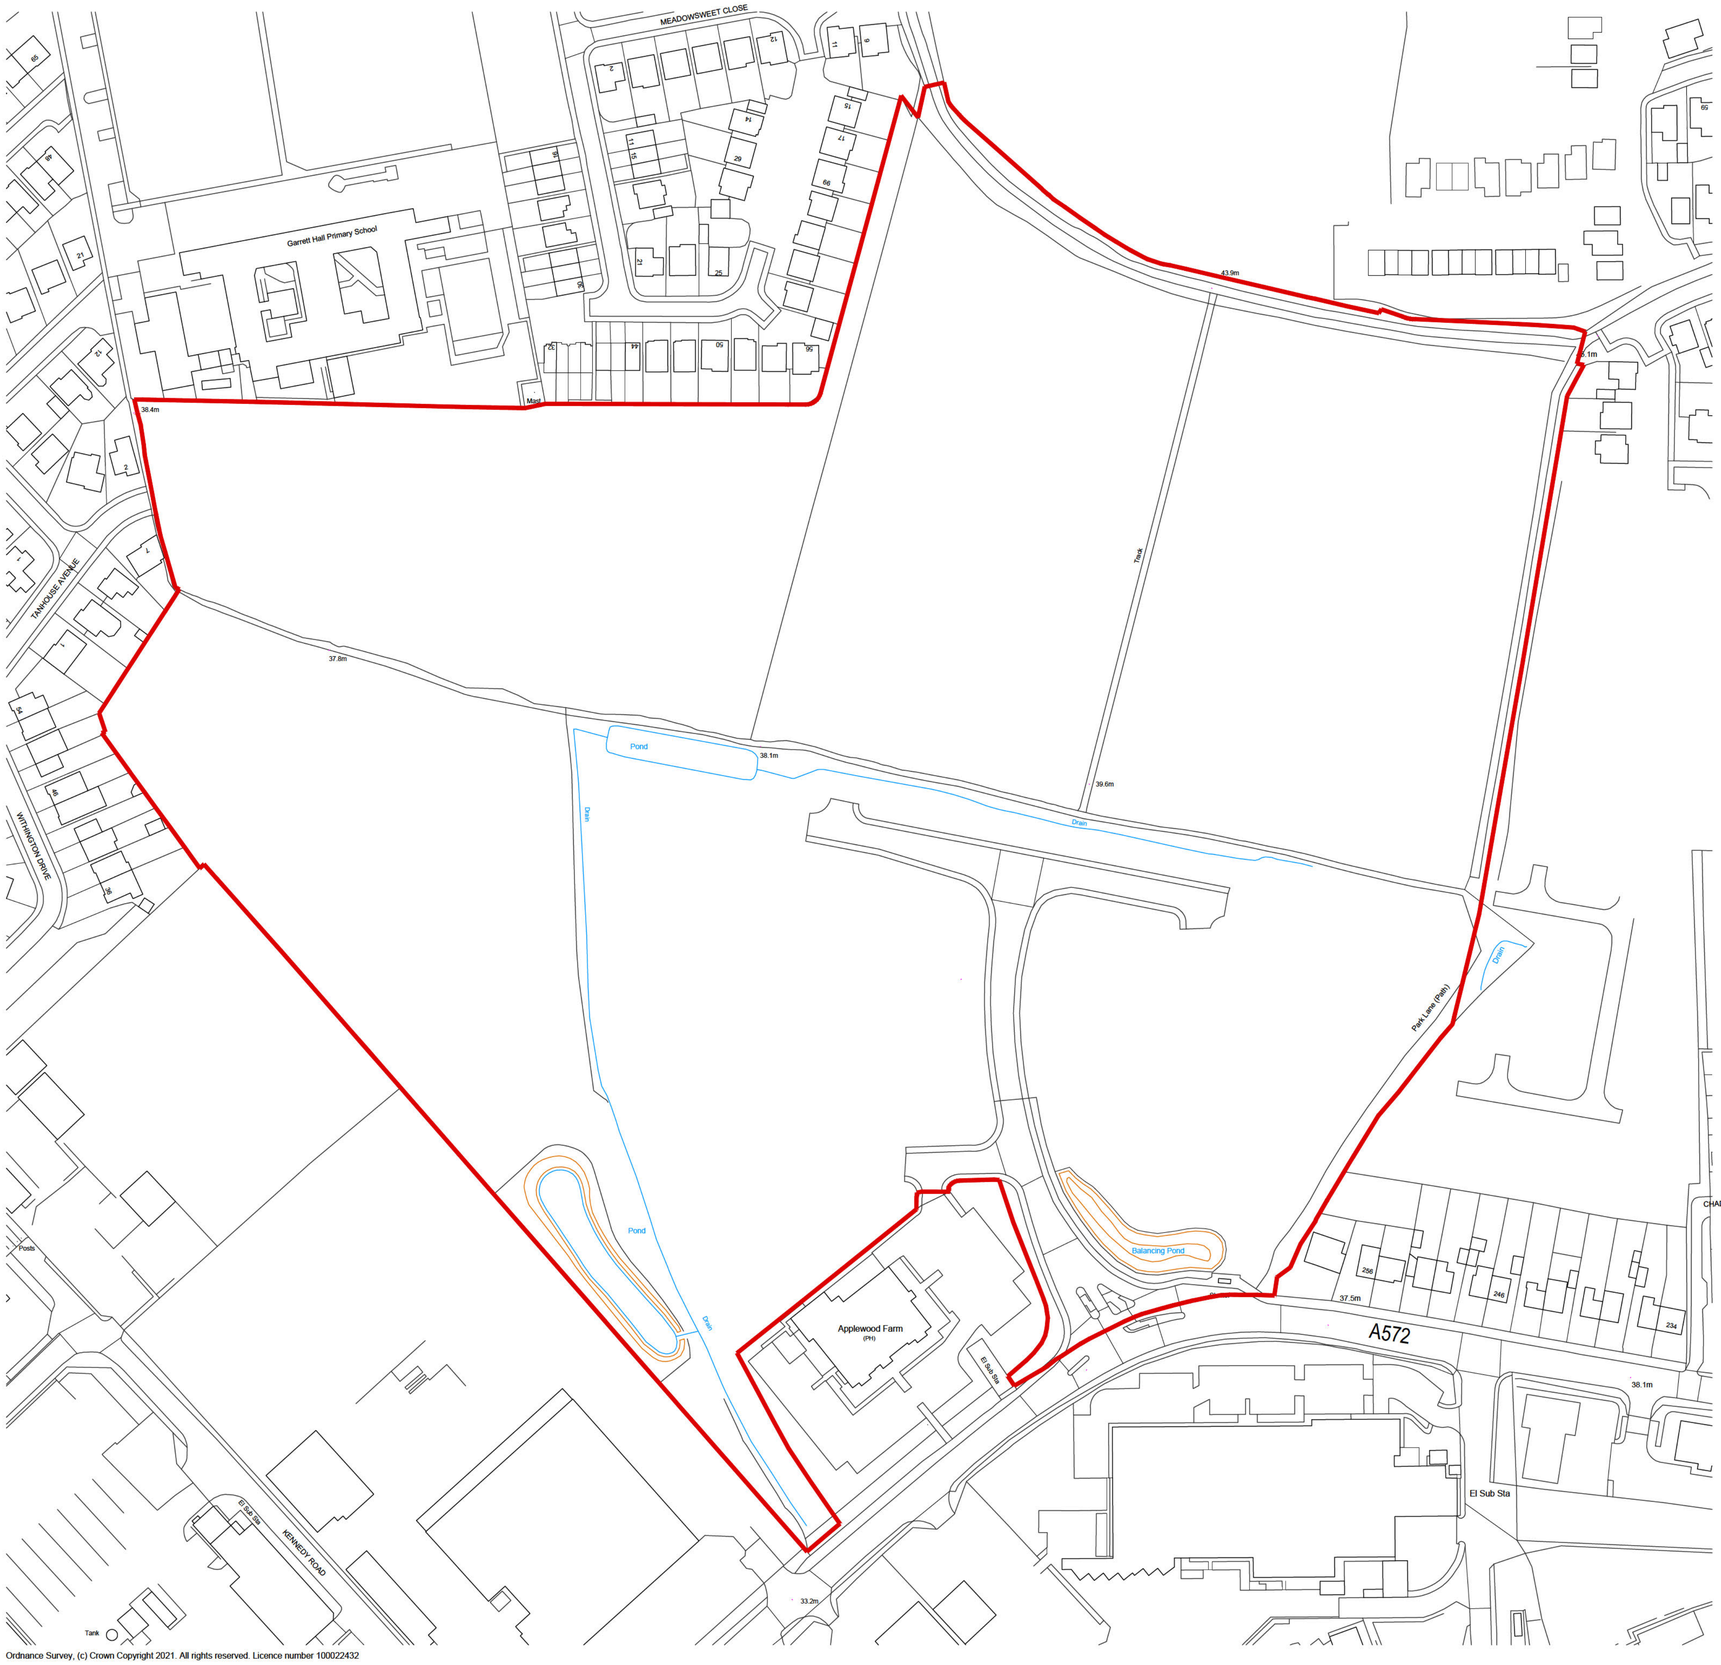
9.1.3. The NPPF is focused on building a strong and competitive economy, and supporting sustainable development – the proposed development wholly aligns with these principles.

9.1.4. Furthermore, the proposals are considered to accord with key Wigan Local Plan Core Strategy planning policies SD1, SP1, SP2 and CP5 and saved policy EM1A from the Wigan UDP.

9.1.5. There are a number of significant benefits associated with the development including;

- Delivery of a range of new, logistics based flexible employment units to diversify employment land provision in Astley;
- Significant economic benefits including;
  - Creation of temporary employment during the construction phase;
  - Full-time employment once operational;
  - Additional expenditure in the local economy once operational; and
  - Promoting further investment and retention of industry within Astley;
- Efficient redevelopment of an allocated site which makes optimal use of the site and reduces the need for additional employment sites to be released;
- Social benefits through significant job creation both during construction and once operational with a range of positions created. New employment would be accessible to the local community; and
- Environmental benefits such as new landscaping, tree planting and footpath improvements throughout the site.

9.1.6. In addition to the above benefits, the application is supported by a suite of technical assessments that clearly demonstrate that the proposed development is technically and environmentally acceptable in terms of design, highways impact, flood risk/drainage, ecological impact, air quality and noise.



9.1.7. The principle of development is acceptable, and the extensive technical assessments demonstrate that the proposed development clearly constitutes sustainable development.

9.1.8. As such, the proposal is in accordance with the Development Plan and, in line with paragraph 11 of the NPPF, should be approved without delay.

Appendix C

CONSULTATION LETTER ISSUED TO LOCAL RESIDENTS

Public

Dear Occupier

FEEDBACK INVITED ON DEVELOPMENT PROPOSALS AT LAND AT ASTLEY PARK WAY (OFF CHADDOCK LANE), TYLDESLEY, WIGAN

We write on behalf of PLP to inform you of plans to develop land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan, M28 1DP for a proposed logistics and warehousing development.

As a local resident, we wanted to share details of the proposals with you before submitting the application to Wigan Council. We are keen to hear your views.

PLP

PLP is a specialist UK logistics and industrial property business with a proven track record. PLP is committed to delivering a high-quality logistics and warehousing development to accommodate flexible industrial, storage and distribution uses with ancillary office spaces, service yards, landscaping and parking areas to meet the current and changing needs of commercial enterprises.

Site background

The site is allocated as a Primary Employment Area within the Wigan Local Plan and is therefore an appropriate location for such development. The site boundary is shown on the enclosed plan.

You may recall that outline planning permission was granted previously at the site for mixed employment and residential development (approved in February 2017), with the residential development associated with this permission now mostly constructed.

The approved employment development element has since expired; therefore, we are seeking a new planning application to enable the development to come forward in the short-term.

Overview of the proposals

The proposed development has been designed to take into account site constraints and to mirror the development parameters approved in the expired planning permission as far as possible.

- Extensive landscaping is proposed including the formation of landscaped mounds with tree planting on top along all site boundaries.
- Existing public footpaths passing through the site will be diverted and upgraded to ensure that public connectivity with the surrounding area is not only maintained but significantly improved for all users.
- The site will be accessed from the existing junction at Chaddock Lane to the south and all of the warehouse service yards will be internally facing to ensure that no service yards face towards the site boundaries or residential areas.

We have been working closely with planning officers to bring an application forward to develop the site and intend to submit an application to Wigan Council shortly.

A Proposed Site Masterplan providing further details of the layout of the proposed development, diverted/upgraded footpaths and extensive landscaping proposals is attached to this letter.

The next page sets out the key benefits of the proposals and how you can provide feedback.

Key benefits of the proposals

The development proposals will deliver the following benefits to the Borough, most of which will be experienced at the local level:

- **Economic benefits:**
  - The proposals will deliver a high-quality and attractive employment development which will be appropriate within its surrounding context and provide an efficient use of land, taking advantage of the already built access road (Astley Park Way) and in doing so help the original aspirations of Wigan Council's employment allocation to be realised.
  - The proposal will create temporary and permanent economic benefits in the form of up to **500 new jobs** with the potential to also generate employment throughout the supply chain and bring investment and additional spending to the local economy;

- **Design quality and ensuring a sensitive site layout:**
  - The proposal will feature a carefully designed modern employment development that respects the local character, the amenity of nearby residents and that seeks to maintain and improve the permeability of the site currently provided by the public footpaths and bridleways passing through the site.
  - The masterplan has been sensitively developed with constraints in mind and through an extensive landscaping scheme and thoroughly considered architectural layout will ensure that the development is appropriate to its context and offers benefits to the community.

- **Landscaping proposals**: the landscaping proposals for the development will include the provision of:
  - Planting of **310 new trees** of which approximately half (155 trees) will be at a height of 1.75m to 3.5m at the point of planting and will mature and grow taller over time;
  - Significant areas of woodland, thicket, ornamental, wildflower and grassland across the site, much of which will surround the proposed diverted and upgraded footpaths;
  - Provision of 2,215 linear meters of new hedgerows; and
  - Provision of landscaped mounds along the site boundaries, ranging in height from 2.1m – 4.1m in height, which will then have woodland tree planting on top to create a considerable landscaped buffer to provide visual screening between the warehouse buildings and neighbouring residential properties.

You can contact myself via [redacted] (Mon-Fri during office hours) or via email UKPlanningComment@wsp.com with comments.

Please provide any comments by **9 October 2023.**

There will, of course, also be a further opportunity for interested parties to formally comment on the planning application in due course, once submitted to Wigan Council.

I trust this is helpful. Please feel free to get in touch if you have any further queries.

Yours sincerely

Dear [redacted]

Further to the email below, your earlier issue of the invalid letter (dated 27/10/23) in respect of the above, we have now prepared a Construction Environmental Management Plan, as requested, to respond to the final of your points in your letter. Please find the CEMP attached. My colleague has responded to all of your other requests in the email trail attached.

Please can you confirm receipt, that you now have all the required additional/corrected plans/documents and can proceed with validating the application?

Please let me know if you have any queries.

Kind regards

Thank you for issuing the attached correspondence

We have issued a series of emails containing documents and amended plans to address points numbered 2-7 in your attached letter.

With regards to point 1 on the need to provide to a CEMP, we can address this during the course of determination of the application but it shouldn't hold up validation. In many cases, this is recommended as a planning condition by consultees.

Please can you confirm the above?

Kind regards

INITIAL CONSTRUCTION AND ENVIRONMENTAL MANAGEMENT PLAN

Report ref: 70090159.001.CEMP

Date: 31/10/2023

WSP has prepared this Initial Construction Environmental Management Plan (CEMP) on behalf of PLP in support of the planning application for development on Land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan.

The proposed development will consist of modern warehouses for industrial and manufacturing purposes within an employment site that has been allocated for development within the Local Plan.

This initial CEMP what details may be required in a subsequent bespoke CEMP to be secured by planning condition (and prepared by the eventual building contractor) following the granting of planning permission and prior to the commencement of development and provides initial intent and ideas on how the development will be built in a safe, environmentally sound and sensitive manner.

As a minimum the bespoke CEMP will cover the following topics:

a) roles and responsibilities:

- The CEMP will detail the structure of site management roles and responsibilities, including any use of contracts and sub-contracts.

b) stakeholder engagement:

- The CEMP will detail how stakeholders including the local community will be engaged with, including provision of updates and methods of communication and contact, so that interested parties can contact the right people should any concerns or queries arise during the development.

c) anticipated programme:

- The CEMP will set out the anticipated build programme, from initial site mobilisation through to completion.

d) working practices (eg hours of operation, duration of works):

- The CEMP will set out parameters to which the development programme will apply, in order to respect the environment and the local community.

e) environmental constraints and receptors:

  - air quality
  - ground and groundwater
  - water bodies
  - humans and development
  - surrounding areas

- The CEMP will set out the local risks and receptors and include details of how the development will respect these constraints and ensure no harm arises.

f) noise and vibration:

- The CEMP will detail how any noisy or vibrating activities will be managed to minimise impacts on local residents and the local environment.

g) ecology:

- The CEMP will detail methods of protecting local environmental and ecological features.

h) construction site layout (eg compounds, welfare, parking, storage, deliveries, security, boundary treatments, protective measures):

- The CEMP will set out plans on how the construction site will be laid out in order to ensure safe and practical operation.

i) waste:

- The CEMP will set out how waste from demolition and construction will be handled and dealt with in accordance with the waste hierarchy.

j) transport (eg delivery routes, signposting, access/egress, circulation, wheel washing, road inspections):

- The CEMP will set out how the development will proceed to ensure minimal effects on local road network.

k) induction, training and health and safety:

- The CEMP will provide details of the training, mandatory requirements and good practices that all staff on site will need to comply with.

l) auditing, monitoring and management:

- The CEMP will set out how the developer will ensure that the development proceeds in accordance with the CEMP, include protocols for checking and monitoring compliance. It will also include details on how any departures from the CEMP will be recorded, managed, and handled. It will also set out measures for adaptation or action should any problems or issues be identified or raised.

INTRODUCTION

PUBLIC

1 INTRODUCTION

1.1.1. This Planning and Heritage Statement has been prepared by WSP on behalf of Astley Care Unit ("the Applicant"). The purpose of this Statement is to assist Wigan Metropolitan Borough Council ("the Council") in the consideration of a full planning application for a development at land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan ("the site").

1.1.2. The description of the proposed development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

1.1.3. The site benefits from an allocation as a Primary Employment Area (ref: EM1A) within the Wigan Local Plan (WLP).

1.1.4. The application seeks to provide modern warehouses for industrial and manufacturing purposes within an employment site long established for the development sought by virtue of its Local Plan allocation that takes into account site constraints and as far as possible to mirror the development parameters approved under the outline planning permission (ref: A/15/81365/OUTMAJ).

1.1.5. This Statement sets out why planning permission should be granted for a major development that will deliver a high-quality logistics and warehousing scheme to accommodate flexible B2/B8 uses with ancillary office spaces, service yards, landscaping and cycle and parking areas to meet the current and changing needs of potential occupiers on this allocated Primary Employment Area within the Local Plan. The scheme, if approved, will deliver substantial socio-economic benefits to the area and Wigan Borough, including the creation of significant levels of employment.

1.2 THE APPLICANT

1.2.1. Astley Unit Trust is a subsidiary of PLP, a specialist UK logistics and industrial property business, founded in 2015. The full service platform sources, develops and manages prime UK logistics real estate on behalf of institutional capital partners, with in-house management expertise across all key capabilities including acquisitions, planning and development, leasing and asset/investment management. PLP's core business strategy is to develop prime, large scale logistics assets and add value throughout their investment life cycle.

1.2.2. The PLP platform is owned by Ivanhoé Cambridge, Peel L&P, Macquarie Asset Management, and its senior management team.

1.2.3. PLP currently manages two develop to core ventures, UK Logistics Venture (UKLV) 1 & 2. UKLV1's £500m of equity is fully committed, with 10m sq ft of prime logistics space either completed or under development, while UKLV2's £750 million of allocated capital is currently being deployed. On a completed basis AUM from these ventures is expected to reach approximately £2.5bn.

1.3 STRUCTURE OF THIS STATEMENT

1.3.1. This Statement is structured as follows:

- Section 2 sets out the site context and the planning history associated with the application site;

- Section 3 outlines the proposed development;
- Section 4 provides a Statement of Community Engagement, setting out details of the public engagement undertaken to date;
- Section 5 sets out the relevant planning policies at a local and national level;
- Section 6 provides the reasons why planning permission should be granted and
- Section 7 provides a Heritage Statement assessing the impacts of the proposals on nearby listed buildings and heritage assets;
- Section 8 sets out suggested S106 Heads of Terms; and
- Section 9 provides the conclusions and the overall planning balance.

2 SITE CONTEXT

2.1.1. The site is greenfield land allocated as a Primary Employment Area in the WLP and is located within the area known as Astley Business Park within the Borough of Wigan, situated towards the eastern part of the Borough. The site is also located to the north of the East Lancashire Road (A580).

2.1.2. The site (as identified in **Figure 2-1** below) is an irregularly shaped parcel of land. The site largely comprises approx. 12.71ha of land primarily used as agricultural fields used for grazing, separated by hedgerows and a number of trees. A Site Location Plan can be found at **Appendix A**.

Figure 2-1 - Site Location Boundary, Astley (Google Earth, 2023).

2.1.3. The site broadly falls from northeast to southwest with levels ranging between c.47m AOD and c.38m AOD across the site.

2.1.4. There are areas of more dense vegetation in the south-west of the site. The site also features a partly constructed internal access road present in the centre of the site as enabling works to serve future development.

2.1.5. A small ditch network passes through the centre of the site, falling in a south westerly direction, before outfalling into a culvert. This ditch network runs parallel to a public footpath running in an east-west direction through the centre of the site, with a perpendicular branch connecting the footpath the roads to the north (Garrett Lane) and south (Chaddock Lane). Attenuation basis are present within the south-western part of the site and to the east of the site access road.

2.1.6. The northern boundary of the site is demarcated by Garrett Lane which extends east to west. On the northern side of Garrett Lane, there is outline planning permission for residential development for up to 600 dwellings (ref: A/13/77906 MAJ OUTLINE) which is currently under construction.

2.1.7. Directly towards the south of the site, adjacent to the boundary is the Applewood Farm public house which benefits from access from the internal access road (Astley Park Way) which leads onto

Chaddock Lane. Towards the south and south-western boundary and beyond are existing established industrial and warehouse uses. As such, the surrounding land uses are of predominantly mixed industrial and residential in nature with a leisure use (the public house) to the south-west and Garrett Primary school located towards the north-western boundary.

2.2 PLANNING DESIGNATIONS

2.2.1. The site is allocated for B1, B2 and B8 uses under Policy EM1A 'Primary Employment Areas' within the saved policies of the Wigan Replacement Unitary Development Plan (2006).

2.2.2. The local plan policies map is shown in **Figure 2-2** below, with the extent of the employment allocation shown in light purple.

2.2.3. The entire site is located within Flood zone 1.

2.2.4. The site is not within a conservation area and does not contain any listed buildings.

Figure 2-2 - Extract from online proposals map (Wigan.gov.uk, 2023)

2.3 PLANNING HISTORY

2.3.1. In terms of the site's planning history, **Table 2-1** below outlines the most relevant planning applications undertaken using the Council's planning portal, however it should be noted that the site has an extensive planning history extending back over 20 years.

2.3.2. The most pertinent planning history to this application is the permission for major mixed employment and residential development which was granted in 2017 (ref: A/15/81365/OUTMAJ). The residential elements of this consent have been implemented following approval of reserved matters (refs: A/17/83910/RMMAJ and A/19/87155/RMMAJ), however the employment element of the outline consent was not implemented within the required timeframe and has thus expired.

Table 2-1 – Relevant Planning History

Planning Reference	Description	Decision Date	Status
A/15/81365/OUTMAJ	Outline application for a mixed use development comprising up to 28,000 SQM of employment floor space (use classes B1, B2 and B8), up to 165 dwellings, land for community use, open space, landscaping and association infrastructure (all matters reserved except employment access from Chaddock Lane; residential access from Garrett Hall Road and Garrett Lane)	27 February 2017	Approved
A/12/76732	Application to extend time limit for implementation of planning permission A/08/72144 - To vary condition 2 of planning approval A/06/67659 to accord with revised master plan and site access arrangement to outline application for an employment park comprising up to 31,500 square metres of class B1, B2 and B8 uses (All matters reserved except access).	13 December 2012	Approved

3 STATEMENT OF COMMUNITY INVOLVEMENT

3.1 LEGISLATION AND POLICY

3.1.1. The importance of pre-application consultation and community engagement are emphasised in the following:

- Community Involvement in Planning: The Government's Objectives (2004);
- Localism Act (2011);
- National Planning Policy Framework (NPPF) (2023); and
- Wigan Council's Statement of Community Involvement (SCI) (2021).

3.1.2. Wigan's Statement of Community Involvement was adopted in July 2021. It sets out what the Councils are required to produce that sets out what consultation will take place with the community on Planning Policy documents and planning applications. The SCI states who the Council will consult with, when and how.

3.1.3. The SCI encourages applicants, developers and agents to consider '*involving the Community prior to planning application submission', emphasising that 'pre-submission consultation can offer many benefits*'.

3.1.4. Furthermore, the SCI recommends that such consultations should take place as early as possible in the design of the scheme, with developers expected to provide evidence of pre-application consultation thereafter.

3.2 CONSULTATION APPROACH

3.2.1. In accordance with Wigan's Statement of Community Involvement, the applicant has engaged with key stakeholders such as local residents and local Ward Councillors and has carried out a formal community engagement exercise.

3.2.2. The following consultation methods have been implemented for the proposals:

- Letters issued to local Ward Councillors for Tyldesley and Mosley Common ward (where the site is located) and Ward Members for Astley ward (as the site is adjacent to the ward boundary) including a site plan inviting them to a meeting should they wish to discuss the scheme in more detail;
- A letter drop (via Royal Mail) to residential addresses nearest to the site including neighbouring businesses (the letter can be found at **Appendix C**).

3.2.3. Comments were invited on the planning application proposal. The consultation was designed to allow the local community to view the proposals and share their feedback with the design team.

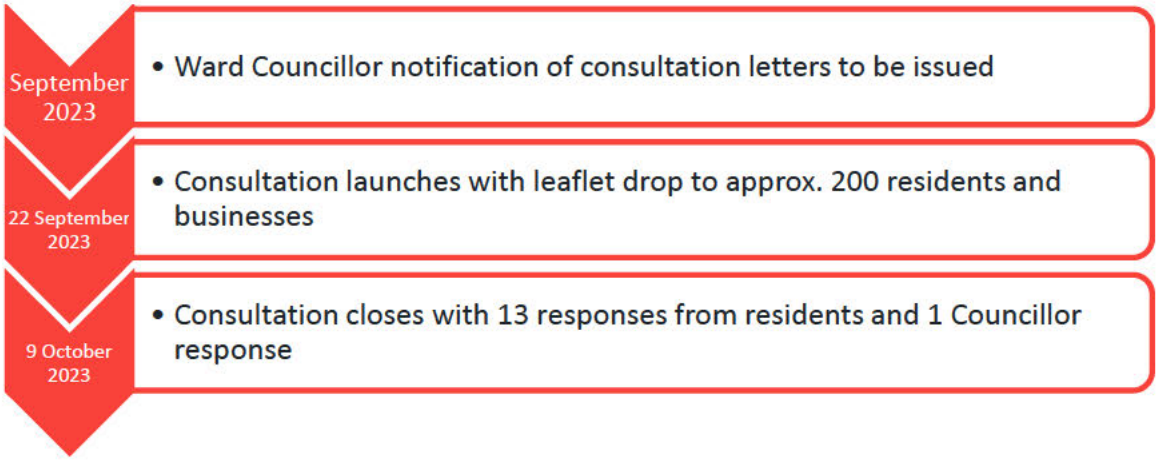
3.3 COUNCILLOR ENGAGEMENT

3.3.1. In September 2023, all Councillors representing Astley and Tyldesley and Mosley Common wards were consulted via email and provided with a copy of the proposed site plan.

3.3.2. Councillors were contacted in advance of a wider consultation with the local community commencing.

3.3.3. The correspondence offered the opportunity for a virtual meeting to be organised where members of the team would be on hand to explain the proposals in greater detail and also answer any questions.

3.4 CONSULTATION WITH THE LOCAL COMMUNITY



3.4.1. The consultation process for this application was designed to allow the local community to view the draft proposals and share their feedback with the team before the scheme is finalised and the application is submitted.

3.4.2. As a result, a letter, which provided details of the proposals was distributed to approximately 200 properties across the distribution area shown on **Figure 3-**1. Letters were posted on 22 September 2023 and contained an email address and phone line, presenting draft plans and further details of the scheme proposals. This approach and the distribution area was agreed in advance with planning officers at WMBC.

Figure 3-1 - Extent of properties consulted (Source: Google Maps)

3.5 TIMELINE OF KEY EVENTS

3.6 SUMMARY OF FEEDBACK RECEIVED

3.6.1. From the feedback received to the consultation exercise it was clear that impact on residential amenity and highways impact were key themes and the feedback received has helped influence the proposals.

3.6.2. Some specific comments are detailed below:

'There is wildlife living within the fields, we have recently seen owls flying around and there are numerous bird species too which nest in the bushes around the fields.

I am aware of the landscaping proposals however it will take years for this to develop to provide screening and noise barriers to the neighbouring residential properties.'

3.6.3. Other isolated comments related to the following:

- Potential impact on local highways network
- Loss of green space
- Impact on noise and amenity
- Impact on property value

3.6.4. The planning, design and technical assessment documents forming part of the application provide a robust assessment of the proposed development of all material technical consideration, in particular the impact of the scheme on residential amenity (discussed in detail in this Planning Statement) and in terms of highways impact (discussed in detail in the Transport Assessment)

3.7 ADDRESSING THE FEEDBACK

3.7.1. The following section outlines the response the design team have provided as a result of comments made during the consultation.

PUBLIC COMMENTS

Table 3-1 - Key issues received from the public

Consultation Response	Design Team Response
Impact of operations on amenity and noise	Some responses raised the issue that the future employment uses could impact upon local amenity in noise terms. A noise impact assessment has been undertaken and includes baseline surveys of existing noise conditions, an assessment of the potential impacts and mitigation requirements to accord with best practice, guidance and relevant regulations. Noise levels from activity during both the day time and night time will be kept within acceptable limits due to the proposed landscaped bunds (which act as a noise barrier in their own right) and the fact that all service yards are facing internally (rather than externally towards the site boundaries), plus a range of site management measures that would be adopted once the development is operational.
Design, height and massing of the buildings	Some concerns were raised about the design and appearance of the buildings, specifically the heights of units 1 and 2 particularly compared with other developments built locally. Due to the sensitive design of the proposed building facades, choice of elevational materials and the hipped roof line it will lessen the visual impact. To lessen visual impact further, in addition to the sensitive design methods adopted in the building design, landscaping around the perimeter of the site is to be bolstered by native planting atop earth mounding to aid screening of the development. Landscaped areas are proposed across the site with landscaping features such as 3-4m high bund running mainly across the northern boundary and a 3m high land mound on the eastern boundary. A further section of bunding is provided to the west of the site, providing screening to the residential properties. The width of the landscaped bund to the west of the site will be approximately 25m.
Highways impacts	Some concerns were raised about impact on local highways network. A Transport Assessment and Travel Plan have been prepared for this proposal which looks at the highway network. The assessment has been undertaken using standard appraisal methods. The assessment shows that the scheme is located in an accessible position with good opportunities for access by sustainable modes (including walking, cycling and public transport). The assessment also shows that the proposal will not generate a significant level of traffic and will not have a material impact on highway operation or road safety. The Transport Assessment shows that the proposal meets both local and national policy requirements and will assist Wigan Council to meet its wider ambitions to reduce carbon generated by developments.

3.8 SUMMARY

3.8.1. In accordance with the Wigan's Statement of Community Involvement, this statement provides a chronology of the pre-application consultation that has been undertaken with the local community to assist in the shaping of this proposal.

3.8.2. The consultation indicated areas of concern for local residents, however, the consultation event has provided an opportunity to address local resident's concerns and direct them towards the planning application submission documents for further details.

3.8.3. In light of the above, the consultation approach for the proposal is in accordance with the Council's adopted SCI guidance, Localism Act and NPPF.

4 PROPOSED DEVELOPMENT

4.1 OVERVIEW

4.1.1. The description of development is as follows:

"Planning application for the development of Use Class B2/B8 warehousing units (including ancillary integral office space (Use Class E(g)) with associated car parking and service yards; internal access roads; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping works"

4.1.2. Full planning permission is sought for up to 32,826 sqm (GIA) (c. 353,336 sqft) split across four warehousing units, each with ancillary floorsapce. The different warehouses will range in size and will be flexible in order to offer B2/B8 use with some ancillary office and reception areas.

4.1.3. The Proposed Site Plan can be found at **Appendix B** with full details of the proposed design and access arrangements contained within the supporting Design and Access Statement.

4.2 LAYOUT, SCALE AND MASSING

4.2.1. The proposals comprise four new warehousing/logistics buildings (referred to on the plans as 'Units 1-4') with contemporary ancillary office facilities to support the primary function of the units.

4.2.2. The buildings have been carefully positioned as far as practicable within the central part of the site, mindful of proposed landscaping corridors and away from the site boundary to offer space strong landscape buffers, as well as acoustic and visual barriers. The units are also 'internally facing' to ensure that service yards are all situated towards the centre of the site to provide further acoustic and visual mitigation.

4.2.3. The proposed development includes ancillary structures and enclosures such as security gatehouses to Units 1 and 2 and sprinkler pump house and tanks. Transformers and substations are also included within the designs which will feature GRP enclosures to soften their appearance and fencing to prevent unauthorised access.

4.2.4. The proposed layout has been worked up in detail in accordance with the Applicant's commercial requirements to provide modern, flexible and fit-for-purpose employment units with sufficient outdoor yard spaces, servicing and parking areas. The layout and proposed siting of the buildings provides a commercially attractive layout whilst ensuring that the site constraints have been appropriately considered.

4.2.5. The scale and massing of the buildings have been optimised in order to provide the most efficient layout. The scale and massing of the proposed development has been influenced by the site's surrounding context. The architect has sought to achieve this through using different materials to break down different elements of the building to soften the appearance and to better respond to the neighbouring uses.

4.2.6. The buildings will have a maximum height of 18.35m to the ridge and will not be overbearing within their context. The proposed size and height of the units is based on assessed current and future market needs and allows sufficient internal clearance for future occupiers.

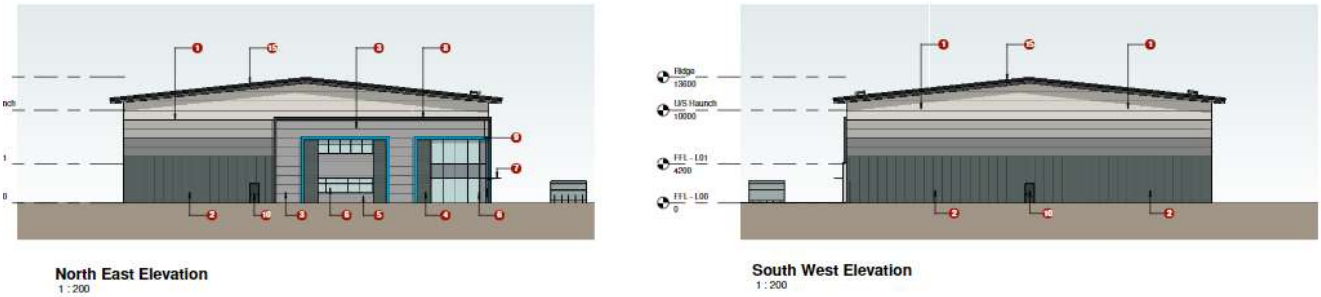


Figure 4-1 - Proposed Site Masterplan

4.3 APPEARANCE

4.3.1. The proposals reflect contemporary design principles in creating a high-quality B2/B8 buildings. The elevational treatment of the buildings provides a robust yet high-quality design utilising a contrasting colour palette to break down the elevations and soften the appearance of the buildings.

Figure 4-2 - Elevational drawings of proposed Unit 4

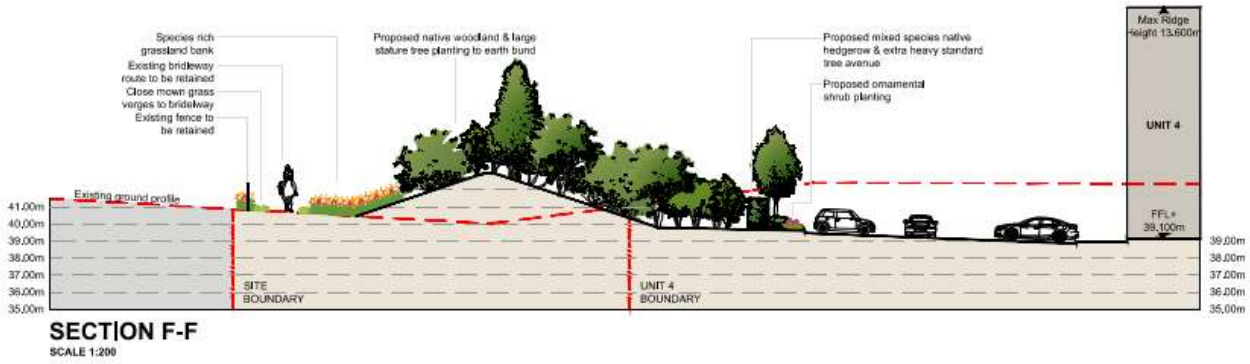
4.3.2. The majority of buildings will be clad in gradated horizontal trapezoidal profiled cladding finished in grey. The façade of the units will be broken up with profiled cladding.

4.3.3. The areas above the loading doors will feature darker grey smooth wall panels. Finishes have been chosen for their durability and colour fastness.

4.3.4. High speed roller shutters will be insulated composite panel and are featured in every single unit. Elevations are further broken up by PPC framed glazed entrance doors and windows for the potential reception parts of the units.

4.3.5. The appearance, materials and colours have been proposed to minimise the impact of the buildings from a visual perspective. The chosen colour palette of grey will be utilised to provide contrast to the cladding and ensure that the design is sympathetic to its surroundings.

4.4 LANDSCAPING



4.4.1. Significant areas of landscaping are proposed along all site boundaries.

4.4.2. As part of the proposals, a comprehensive landscape strategy has been prepared. Landscape areas are proposed across the site with landscaping features such as 3-4m high bund running mainly across the northern boundary and a 3m high land mound on the eastern boundary. A further section of bunding is provided to the west of the site, providing screening to the residential properties.

4.4.3. The landscaping proposals feature the planting of over 310 trees of multiple types and includes the planting of hedgerows, wildflower and amenity and translocated grassland.

4.4.4. Where bunds are proposed, as illustrated in the landscape section at **Figure 3-1** below, these will comprise a combination of landscaped mounds with planting atop to ensure an effective and durable visual barrier is provided to the north, east and west boundaries.

Figure 4-3 - Example of landscaped bund section

4.4.5. New areas of hedges, trees and low planting are proposed within the centre of the site and a tree-lined boulevard provides an attractive setting for the employment park.

4.4.6. The two attenuation ponds towards the southern boundary will be retained as part of the landscaping and drainage strategy and supplemented by a swale and bioretention zone on the western and northern boundary spanning in a north/south and west/east direction.

4.4.7. New areas of hedges, trees and low planting are proposed within the centre of the site and a treelined boulevard also forms part of the proposals.

4.4.8. As the landscape develops and matures it will help to assimilate the proposed development into its immediate site and surroundings, providing a high level of screening.

4.5 FOOTPATH DIVERSIONS

4.5.1. PROW Tyldesley No. 161 that runs along Tanhouse Avenue, is located to the west of the site. This footpath meets Tyldesley No. 159 which runs east-west across the site, before heading north, to its junction with Tyldesley No 161 and continues as Tyldesley No. 160 up to Garrett Lane.

4.5.2. The proposals include the provision of a section of footpath running along the back of houses on Westminster Drive and Tanhouse Avenue. This particular section is only a permissive path and therefore is not part of the wider PRoW diversion/improvement scheme. This section of footpath is not something that the applicant is obliged to deliver due to any rights or otherwise of the neighbours, however the applicant is willing to provide this additional section of footpath (with permissive rights) in the interests of being a good neighbour.

4.5.3. Footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 will be permanently diverted as part of the proposals with stopping up orders due to be submitted separately. Please see drawings no. 21714-HYD-XX-XX-SK-D-0001, 21714-HYD-XX-XX-SK-D-0002 and 21714-HYD-XX-XX-SK-D-0003 showing the extent of existing PRoW passing through the site.

4.6 ACCESS, CIRCULATION AND PARKING

4.6.1. In addition to the footpath diversions and improvements to the site permeability set out above, vehicular access to the site will be from Astley Park Way via Chaddock Lane.

4.6.2. The proposed development has carefully taken into account vehicle circulation within the site by clearly defining the internal service roads. Pedestrian and cycle access will be taken from the same proposed access road as the vehicular entry point, off Astley Park Way via Chaddock Lane.

4.6.3. Specific provision has been made for cyclists through the provision of safe, secure cycle storage in an easily visible and accessible.

4.6.4. In terms of parking provision, the proposal includes 327 car parking spaces (including provision of 17 disabled bays and 35 bays with Electric Vehicle Charging provision) and 73 HGV parking bays.

4.6.5. In addition to the above, 140 cycle parking spaces will be provided.

4.7 PRE-APPLICATION ADVICE

4.7.1. Given the prominence of the site and the potential scale of development, the applicants have, undertaken extensive pre-application discussions with Wigan Council across a period of around 12 months. Formal pre-application meetings have been held (via video conference) with [redacted] and [redacted] at the Council. These meetings were attended by members of the project team, including the applicant, architect and planning consultant.

4.7.2. The key discussion points at the meetings included:

- Master-planning of the site;
- Relationships between the application site and the surrounding residential development
- Height, massing and architecture;
- Landscape;

- Footpath diversions and upgrades;
- Public consultation and stakeholder engagement; and
- Technical constraints including noise, air quality and levels and ground contamination.

4.7.3. There is clear officer support for the development of the site for employment use as in doing so it will help realise the Council's long-held aspiration for this Primary Employment Area. The feedback received has been valuable and has positively shaped the current scheme which fit with the ambitions of Wigan's Core Strategy Local Plan and Unitary Development Plan.

5 PLANNING POLICY

5.1.1. Section 38(6) of the Planning and Compulsory Purchase Act 2004 states that applications for planning permission must be determined in accordance with the development plan, unless material considerations indicate otherwise.

5.1.2. The adopted Development Plan for Wigan Borough Council mainly comprises:

- The Wigan Core Strategy Local Plan (adopted September 2013); and
- Saved Policies Wigan Unitary Development Plan (adopted April 2006).

5.1.3. The National Planning Policy Framework (NPPF) (September 2023) is also a material consideration for development management purposes.

5.1.4. This chapter sets out the relevant planning policies and guidance contained within the NPPF and Local Plan Core Strategy. These are then appraised in subsequent chapters.

5.2 NATIONAL PLANNING POLICY FRAMEWORK

5.2.1. The National Planning Policy Framework (NPPF) was updated on 5 September 2023 and is a key material consideration in the determination of planning applications.

Achieving Sustainable Development

5.2.2. Sustainable Development means meeting the needs of the present without compromising the ability of future generations to meet their own needs (paragraph 8). The planning system has three overarching objectives in achieving sustainable development: economic, social and environmental.

5.2.3. Planning should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area (paragraph 9).

5.2.4. At the heart of the NPPF is the 'presumption in favour of sustainable development' ("the presumption") set out at paragraph 11, which establishes the planning principles in pursuing sustainable development in a positive way. Where there are no relevant development plan policies, or the policies which are most important for determining the application are out-of-date, permission should be granted unless 'any adverse impacts of doing so would significantly and demonstrably outweigh the benefits'. This includes where a local planning authority ('LPA') cannot demonstrate a five-year supply of deliverable housing sites or where the Housing Delivery Test has been failed and is referred to as the 'titled balance'.

Plan Making

5.2.5. Paragraph 23 states strategic policies should provide a clear strategy for bringing sufficient land forward, and at a sufficient rate, to address objectively assessed needs over the plan period, in line with the presumption.

Building a strong, competitive economy

5.2.6. Paragraph 81 encourages a strong, competitive economy where: "Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken

should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential."

Promoting Sustainable Transport

5.2.7. Paragraph 104 requires transport issues to be considered from the earliest stages of development proposals, so that the potential impacts on transport networks can be addressed; opportunities from existing or proposed transport infrastructure, technology and usage are realised; opportunities to promote walking, cycling and public transport use are identified and pursued; the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account; and patterns of movement, streets, parking and other transport considerations are integral to the design of schemes and contribute to making high quality places.

5.2.8. Paragraph 111 makes clear that development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.

Making effective use of land

5.2.9. Paragraph 119 states development decisions should give substantial weight to the value of using suitable brownfield land for identified needs, and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land.

Achieving Well Designed Places

5.2.10. Paragraph 126 stresses the importance of planning positively for 'the creation of high-quality buildings and places.

5.2.11. Paragraph 128 ensures that developments will function well and add to the quality of the area; are visually attractive as a result of good architecture, layout and appropriate and effective landscaping; are sympathetic to local character and history, including the surrounding built environment and landscape setting; establish or maintain a strong sense of place; accommodate and sustain an appropriate amount and mix of development including greenspace and support local facilities and transport networks; and create places that are safe, inclusive and accessible and which promote health and wellbeing.

5.3 LOCAL DEVELOPMENT PLAN

5.3.1. The adopted Development Plan for the Borough comprises the Wigan Local Plan Core Strategy (2013) and the Saved Policies of the Wigan Unitary Development Plan (adopted April 2006).

WIGAN LOCAL PLAN CORE STRATEGY (2013)

5.3.2. **Policy SD1** sets out Wigan Council's position when it comes to and states that reflects the principles in the NPPF relating to the presumption in favour of sustainable development and those applications that accord with the development plan shall be approved without delay, unless material considerations indicate otherwise.

5.3.3. **Policy SP1 and SP2** states that development will be directed primarily to the east-west core of the borough, notably settlements such as Astley. Astley would be the focus amongst other settlements for development within the east of Wigan borough.

5.3.4. **Policy CP 5** states that the council will help to create sustainable economic growth by bringing forward a range of employment sites of the right quality in terms of location and supporting infrastructure to attract, maintain and grow businesses including but not limited to: manufacturing and engineering, logistics and digital information and communication technologies.

5.3.5. **Policy CP7** aims to ensure the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars, coaches and vans/lorries within new developments together with the promotion of the use of travel plans and appropriate provision of infrastructure for the charging of electric vehicles.

5.3.6. **Policy CP9** seeks access opportunities for walkers and cyclists; and measures that will reduce the extent of climate change or enable adaptation. It requires strategic landscaping on all new major development proposals, and seeks the protection of trees which are of value to amenity.

5.3.7. **Policy CP10** seeks to improve the built environment and make it a better place to live by ensuring that new development respects and acknowledges local character and identity; is integrated effectively with its surroundings; responds to climate change; is accessible for all and defines public/private spaces; incorporates high quality landscaping; reduces the risk of crime and anti-social behaviour; and has appropriate waste storage.

5.3.8. **Policy CP11** seeks to conserve and enhance the existing historic environment including the conservation and specific enhancement of heritage assets and their settings including listed buildings.

5.3.9. **Policy CP12** provides an emphasis on protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensure that as far as practicable, the habitats are part of linked networks and not fragmented. In addition, the policy requires the creation of wildlife habitats and features which are beneficial to geological conservation as part of new development.

5.3.10. **Policy CP13** aims to reduce the emission of carbon dioxide arising from new development with the aim to reduce impact of climate change on the environment, economy and quality of life.

5.3.11. It encourages all development to conform to the energy hierarchy by minimising the demand for energy before, maximising the efficiency of energy use before and implementing low-carbon dioxide and renewable energy technologies.

5.3.12. **Policy CP 16** states that development on greenfield sites should not increase the rate of surface water run-off with particular emphasis on ensuring that development in flood zones 2 and 3 and other areas vulnerable to surface water flooding should ensure that they follow a sequential approach in accordance with national planning policy.

5.3.13. **Policy CP17** seeks to help maintain, enhance and protect the existing environment for the benefit of the local population and wildlife by ensuring new development does not give rise to the pollution of any watercourse or groundwater.

WIGAN UNITARY DEVELOPMENT PLAN (ADOPTED APRIL 2006)

5.3.14. **Policy EM1A – Primary Employment Areas** allows development or changes of us to uses within Classes B1, B2 and B8 or other employment uses provided there would be no harm in terms of environmental, amenity, highway, road safety or other.

5.3.15. Astley Business Park at the time was referred to as Site EM1A 9 – Chaddock Lane and the proposed description was for mixed employment area with expansion land.

5.3.16. The policy also states that where all of this Primary Employment Area is to come forward, a masterplan or development brief is to be agreed with and approved by the Council.

5.3.17. **Table 4-1** below provides an appraisal of the proposed development in the context of the aforementioned development plan policies.

Table 4-1 – Wigan Replacement Unitary Development Plan and Local Plan policies

Policy	Analysis
Wigan Replacement Unitary Development Plan 2006	
EM1A Primary Employment Areas Within the Primary Employment Areas, development for, or changes of use to, uses within Classes B1, B2 and B8 or other employment uses will be permitted provided that there will be no unacceptable environmental, amenity, highway, road safety or other adverse impact. Other uses will only be permitted when:- (a) They will be small scale and complementary to the primary employment function of the Area or part thereof; or (b) They are on the fringe of the Primary Employment Area and it can be demonstrated that it will improve the physical relationship between the employment uses and adjacent uses, and it will not result in any greater constraint on the development and use of the remaining Employment Area for employment uses. Where all, or a substantial part of a Primary Employment Area is proposed for development or it is substantially undeveloped, a masterplan or development brief shall be agreed with, and approved by, the Council. Development shall accord substantially with the approved masterplan.	The proposed development seeks permission for mixed B2 and B8 development on the Astley Business Park allocation. The application is submitted with a detailed masterplan for the whole site showing proposed sitting of the employment units. The proposed development therefore clearly accords with Saved Policy EM1A and accordingly the principle of development is acceptable.
Wigan Local Plan Core Strategy, September 2013	
Policy SP1 In the east of the borough development will be focused on Leigh, Atherton, Tyldesley and Astley, including their town centres, and at broad locations for new development east of Atherton and between Tyldesley, Astley and Mosley Common.	The development of the site would form the natural infill or missing jigsaw piece which complements the recently developed residential site to the north known as Garrett Hall which is allocated for up to 600 dwellings.

Policy CP5 Help create sustainable economic growth; boost our economic performance and profile; and provide a wider range of job opportunities, by: 1. Bringing forward a range of employment sites of the right quality in terms of location, accommodation provision and supporting infrastructure, to attract, maintain and grow businesses, especially within the east-west core of the borough. The range of sites will focus on providing opportunities for the following key employment sectors in particular *1. Manufacturing and engineering, including food and drink processing* *2. Logistics / distribution* *3. Digital information and communications technology* *4. Creative/digital/new media* *5. Financial and professional services* *6. Environmental technologies* *7. Construction sector businesses.* 2. Against the qualitative factors set out above, making provision for approximately 200 hectares (gross) of employment land between 2011 and 2026, including reviewing sites allocated previously and undeveloped. 3. Safeguarding existing employment sites and buildings that are capable of continuing to meet the needs of employment uses and for which there is likely to be sufficient demand. 3. Encouraging a suitable supply of small, cost-effective premises for new business start-ups, including managed 'incubator' accommodation.	The proposed development would deliver significant socio-economic benefits and assist in achieving the aspirations of the Local Plan to create new and diversified employment land use. Development of this site will also bring significant socio-economic benefits including the creation of temporary employment during the construction phase, full-time employment once operational and additional expenditure in the local economy once operational. In addition to the above, the development of the site coincides with planning policy by delivering an allocated employment site and therefore reduces the need for additional or non-allocated employment sites to be released.
Policy CP7 Improve accessibility to key destinations for people and goods and connect people to opportunities both within and outside the borough by: Ensuring the provision of appropriate, well designed, convenient, safe and secure parking for cycles, motorcycles, cars, coaches and vans / lorries, including as part of new development	The application is supported by comprehensive Transport Assessment (TA). The conclusions of the TA demonstrate that there will not be severe impacts on the road network as a consequence of the development. The proposed development, in particular the footpath diversion and improvement workswill improve the walking and cycling environment for both local residents and future employees of the site.

Promoting the use of travel plans and requiring them to be produced and implemented for appropriate development. Supporting the appropriate provision of infrastructure for the charging of electric vehicles.	
Policy CP9 Improve the natural environments and open spaces within and between our towns and other settlements - our strategic landscape and green infrastructure - for the benefit of people and wildlife, and help make the borough a better place to live and visit and for businesses to locate and thrive, by: Identifying appropriate green areas to store flood waters away from homes, businesses and community buildings. Incorporating measures that will help to reduce the extent of climate change and/or adapt to a changing climate. Requiring key strategic landscaping on all new major development proposals and incorporating new green infrastructure in larger areas of new development, to help secure regeneration and/or economic development. Protecting trees and woodlands of value to amenity.	A robust landscape strategy is included as part of the proposals. The scale and nature of the built development proposed and the existing surroundings of the site were important factors in the landscape design approach which features a scheme that respects the character of the adjoining local landscape, enhances the ecology of the site and provides a stimulating, coherent and well-structured landscape and resulting in a positive setting for the development. Ornamental species of planting are proposed around the building envelope, along key access routes and within prominent locations adjacent to pedestrian paths. The proposed landscape for the site has been designed primarily to provide screening of the commercial units, to improve local biodiversity and ultimately for the vegetation to successfully establish.
Policy CP10 Improve the built environment of the borough and help make it a better place to live, visit and for businesses to locate and thrive by ensuring that, as appropriate, new development: Respects and acknowledges the character and identity of the borough and its locality, in terms of the materials, siting, size, scale and details used. Is integrated effectively with its surroundings and helps to create attractive places. Meets established standards for design. Includes measures to minimise the impact of and adapt to climate change and conserve natural resources and meets established national standards for sustainability and national carbon reduction targets	The proposed layout has been worked up in detail in accordance with the Applicant's needs to provide modern, flexible and fit-for-purpose employment units with sufficient outdoor yard spaces, servicing and parking areas. The layout and proposed siting of the buildings provides a commercially attractive layout whilst ensuring that the site constraints have been appropriately considered. The scale and massing of the buildings have been optimised in order to provide the most efficient layout. The scale and massing of the proposed development has been influenced by the site's surrounding context. The architect has sought to achieve this through using different materials to break down different elements of the building to better respond to the neighbouring properties.

Incorporates high quality landscaping. Is designed and uses materials that facilitate easy maintenance. Is designed to reduce the risk of crime and anti-social behaviour. Can be well serviced, including making provision for waste storage and collection.	The proposals reflect contemporary design principles in creating a high-quality, flexibleB2/B8 buildings. The elevational treatment of the buildings provides a robust yet high-quality design utilising a contrasting colour palette to break down the elevations and soften the appearance of the buildings. The appearance, materials and colours have been proposed to minimise the impact of the buildings from a visual perspective. The chosen colour palette of grey will be utilised to provide contrast to the cladding and ensure that the design is sympathetic to its surroundings.
Policy CP11 Seeks to conserve and enhance the existing historic environment including the conservation and specific enhancement of heritage assets and their settings including listed buildings.	A Heritage Statement is included within Section 5 of this report and assesses the significance of nearby heritage assets and also assesses the impacts on the significance of these assets as a result of the proposed development. The assessment concludes that the proposal accords with Policy CP11 and will not result in any harm to the heritage assets in the vicinity of the site.
Policy CP12 Help wildlife to prosper and safeguard important geological features by: Protecting and enhancing regional and local priority habitats and species and other features of value to wildlife ensuring, as far as practicable, that habitats are part of linked networks and not fragmented. 6. Requiring reasonable provision to be made for wildlife habitats and features beneficial to geological conservation as part of new development. Taking account of the impact of climate change in the enhancement of existing and the creation of new wildlife habitats	No irreplaceable habitats will be lost. Appropriate and commensurate mitigation will be imposed in respect of protected species. Mitigation, in particular a Construction Environmental Management Plan, will protect retained ecological features and protected sites during construction.
Policy CP13 Reduce the emissions of carbon dioxide arising from new development and help reduce the impacts of climate change on our environment, economy and quality of life by:	The planning application is accompanied by a Energy Statement, which sets out how the proposed development is intended to be designed to aid carbon reduction and climate change resilience. The proposals include a number of measures which can have significant impacts in CO2

1. Encouraging all development, where relevant, to conform to the energy hierarchy by: 1. minimising the demand for energy, before 2. maximising the efficiency of energy use, before 3. implementing low-carbon dioxide and renewable energy technologies. 2. Encouraging those proposing residential development of 10 units or more and/or non-residential development of more than 700 square metres to produce and submit a carbon reduction strategy setting out how the development will incorporate or make provision for, subject to viability, decentralised, renewable or low carbon energy sources to reduce the carbon dioxide emissions of energy use by at least 15%. 3. Encouraging new development to be designed, orientated and constructed so that it can maximise energy efficiency, reduce reliance on fossil fuel energy and take advantage of opportunities for renewable or low carbon dioxide technologies. 4. Encouraging reasonable improvements to be made to the energy performance of the existing building when an extension or other change to a building is proposed	reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.
Policy CP 16 Reduce the risk of flooding from all sources, notably in our flood zones 3 and 2, our critical drainage areas, and other areas vulnerable to surface water flooding, including locations downstream by ensuring that development: 1. Follows a sequential approach in accordance with national planning policy. 2. Is supported by a detailed Flood Risk Assessment where appropriate. 3. Incorporates appropriate mitigation and/or management measures to achieve, where possible, a reduction in flood risk overall. Development on greenfield sites should not increase the rate of surface water run-off. On previously-developed land, a reduction of at least 30% will be sought, rising to a minimum of 50% in critical drainage areas.	The planning application is accompanied by a Flood Risk Assessment and Drainage Strategy. The proposed development will incorporate a comprehensive sustainable drainage system in accordance with policy, guidance and best practice.

Policy CP 17 Maintain, enhance and protect our environment for the benefit of people and wildlife, and make the borough a better place for people to live and businesses to locate and thrive, by: Tackling land contamination and land stability issues, primarily on sites affected by past industrial uses and coal mining activities, by promoting the appropriate re-use of sites, supporting the identification of contamination and stability issues and requiring appropriate remediation. Managing air quality, particularly in our Air Quality Management Areas, including by minimising the air pollution (and carbon dioxide emissions) likely to arise from new development. Ensuring that new development does not give rise to the pollution of any watercourse, groundwater or mossland or result in the transfer of contaminated run-off to surface water sewers. Ensuring that new development is planned and designed so that it does not have an unacceptable adverse impact on amenity and quality of life and/or that it will not itself be impacted upon in such a way by existing uses or activities in the area.	Subject to the adoption of the recommendations set out in the suite of ecology reports and a Construction Environmental Management Plan, which can be secured via planning condition, the proposal will not result in any adverse impacts on the receptors listed in the policy. As demonstrated in the Air Quality Assessment, Drainage Strategy and Phase 2 Site Investigation, the proposals will also not give rise to any adverse air quality, contamination or drainage issues subject to appropriate mitigation being implemented, which can be secured via planning condition. Finally, for the reasons given in response to Policies CP9 – CP13, the proposals will not result in any unacceptable adverse impact on amenity and quality of life for existing residents, uses or activities in the surrounding area.

6 HERITAGE STATEMENT

6.1 INTRODUCTION

6.1.1. The application site does not lie within a conservation area however there are some listed buildings within the vicinity. A heritage assessment has, therefore, been conducted which concludes that the development will be carried out in a sensitive manner which will not be detrimental to the heritage assets.

6.1.2. This assessment has been carried out in the context of relevant statutory duties under Section 66 (1) of the Planning (Listed Buildings and Conservation Areas) Act 1990. These sections of the 1990 Act respectively require that, in determining development applications, special regard is given to the desirability of preserving the fabric and setting of listed buildings. In undertaking their consideration of the development proposals, the Council is required to ensure that any finding of harm is given considerable importance and weight in the decision-making process.

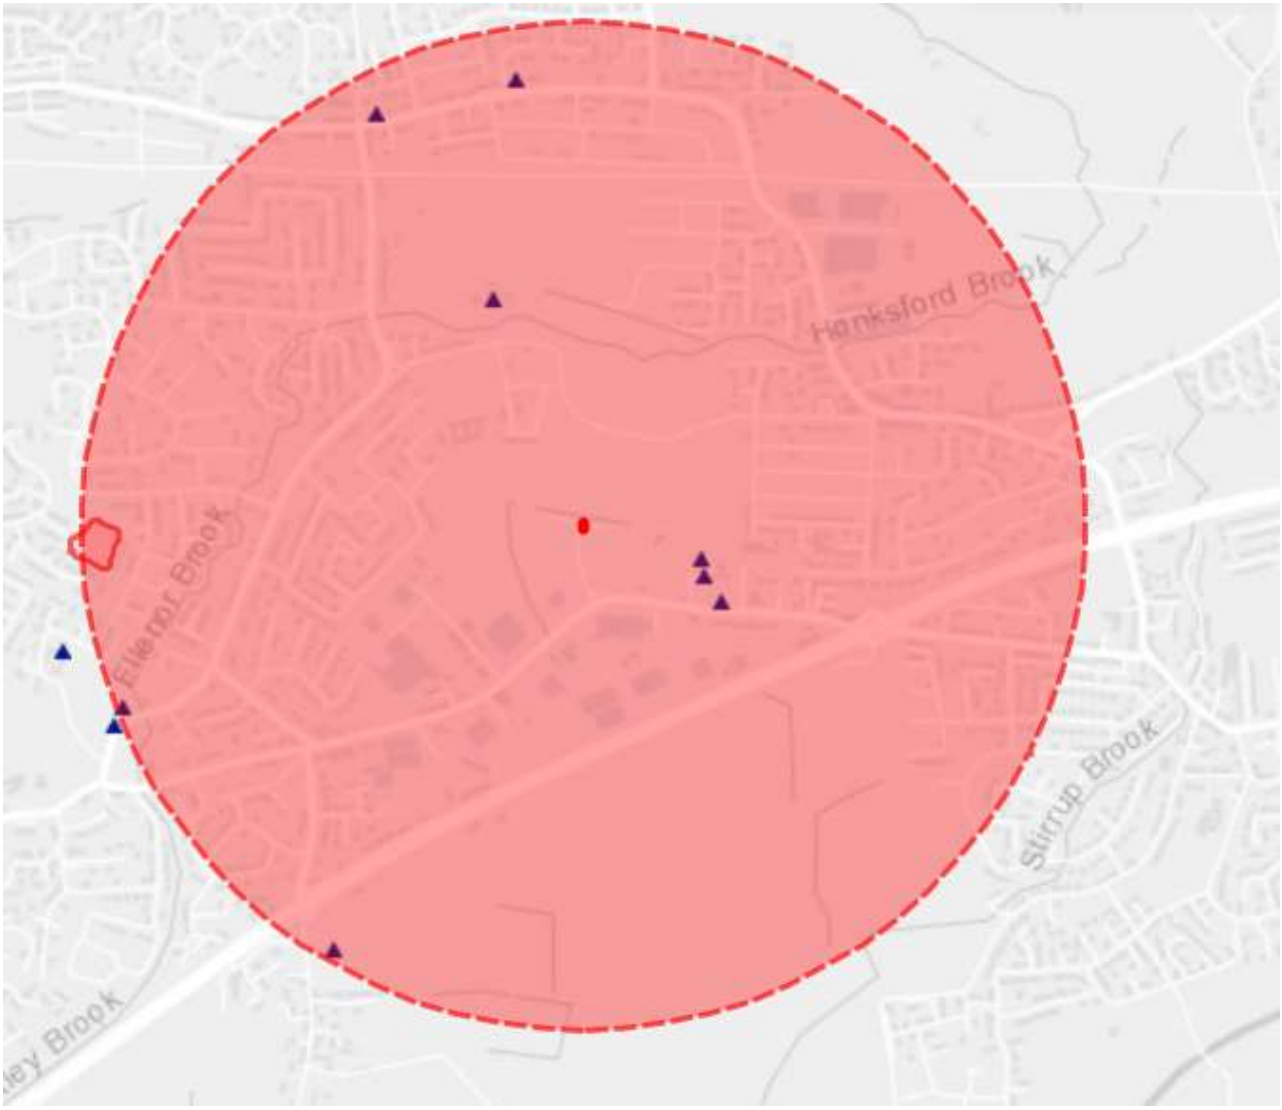
6.1.3. In addition, this assessment has been prepared in the context of national and local heritage planning policy. The assessment is presented to accord with the national policy requirement of NPPF paragraph 194, to describe the significance of heritage assets affected by the proposed development and evaluate the consequent impact of the proposed development.

6.1.4. The aim of this assessment is to demonstrate that the proposed development meets the requirements of local and national planning policy and relevant legislation.

6.1.5. The application site is located towards the south eastern extent of the main urban area of Astley and consists of a series of fields. The site lies adjacent to predominantly residential areas to the north and east, industrial development to the west. The relationship with the other areas is severed by Chaddock Lane which bounds the site to the south respectively. In this manner, the site is a pocket of contained fields.

6.2 IDENTIFICATION OF HERITAGE ASSETS

6.2.1. As with the majority of Greater Manchester towns, Wigan saw a rapid period of expansion during the Industrial Revolution, with associated building and infrastructure being developed. As such, there are a number of listed assets within the wider local area. However, the majority of these are concentrated close to the centre of Leigh and Wigan, some 5km and 13km to north west of the site, with a significantly smaller number and concentration of assets to be found close to the site or within the intervening space.



6.2.2. However, a number of listed assets are to be found closer to the site, as listed below and illustrated in **Figure 6-1**:

- Grade II listed Chaddock Hall Barn (LEN: 1163209) approx. 200m east of the site boundary;
- Grade II listed Chaddock Hall (LEN: 1356222) approx. 150m east of the site boundary;
- Grade II listed Chaddock Hall garden wall and stone gatepiers (LEN: 1068485) approx.. 150m east of the site boundary;
- Grade II listed Garett Hall (LEN: 1163348) approx.230m north of the site boundary;
- Grade II listed 109, Sale Lane (LEN: 1163421) approx. 630m north of the site boundary;
- Grade II listed 7 Sale Lane (LEN 1068448) approx. 680m north of the site boundary;

- Grade II listed Manor House Farmhouse (LEN 1068446) approx. 830m south west of the site boundary

6.2.3. Consideration of these assets and the scoping out of assets further from the site is considered appropriate. This is primarily due to the spatial and functional separation between the site and those assets. The assessment of the assets listed above will demonstrate that this approach is sufficient to understand the potential impact of the proposal on the significance of any assets, given the fact that these assets are closer to the site and similarly listed and have a closer, albeit limited, spatial, visual or functional relationship with the site than any of these other assets (there are no Grade I listed assets within at least one mile of the site).

Figure 6-1 - 1km radius from appeoximate centre of site. The blue triangles are listed assets (Historic England.org)

6.3 LEGISLATIVE AND POLICY CONTEXT

6.3.1. The purpose of this assessment is to demonstrate that the proposed residential development meets the requirements of local and national planning policy and relevant legislation.

Planning (Listed Buildings and Conservation Areas) Act 1990

6.3.2. The legislative requirements of the Planning (Listed Buildings and Conservation Areas) Act 1990 provide specific protection for buildings of special architectural or historic interest, over and above that provided by development management.

6.3.3. Section 66 of the 1990 Act requires that, when considering whether to grant planning permission for development which affects a listed building, the local planning authority, *"shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses".*

National Planning Policy Framework (2023)

6.3.4. Section 16 (paragraphs 189 to 208) of the NPPF is specific to conserving and enhancing the historic environment.

6.3.5. Paragraph 197 states:

"In determining planning applications, local planning authorities should take account of: - the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation".

6.3.6. Paragraph 199 states:

"When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation".

6.3.7. Significance is defined as:

"The value of a heritage asset to this and future generations because of its heritage interest. The interest may be archaeological, architectural, artistic or historic. Significance derives not only from a heritage asset's physical presence, but also from its setting".

6.3.8. The setting of a heritage asset is defined as:

"The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral".

6.3.9. In determining applications, the NPPF also advises that LPAs should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the asset's importance and no more than is sufficient to understand the potential impact of the proposal on their significance.

Historic England Guidance

6.3.10. Historic England is the Government's statutory adviser on the historic environment and its powers are set out in the National Heritage Act 1983.

6.3.11. Historic England provides guidance on a variety of topics. The guidance most pertinent to these development proposals is set out in three documents relating to significance, setting and development:

- Conservation Principles: Policy and Guidance for the Sustainable Management of the Historic Environment (2008);

- Historic Environment Good Practice Advice in Planning Note 2: Managing Significance in Decision-Taking in the Historic Environment (2015); and,
- Historic Environment Good Practice Advice in Planning Note 3: The Setting of Heritage Assets (2017).

6.3.12. Conservation Principles, Policy and Guidance (English Heritage 2008) sets out how the relative levels of significance can be measured:

- Exceptional: an asset important at national to international levels' including scheduled monuments, Grade I and II* listed buildings and World Heritage Sites.
- High: a designated asset important at regional level and also at national level, including Grade II listed buildings and conservation areas. Substantial harm should be exceptional.
- Medium: an undesignated asset important at a local to regional level, including local (non-statutory) listed buildings or those which make a positive contribution to the setting of a listed building or to a conservation area. May include less significant parts of listed buildings. Buildings and parts of structures in this category should be retained where possible, although there is usually scope for adaptation.
- Low: structure of feature is of very limited heritage value and note defined as a heritage asset. May include insignificant interventions to listed buildings. The removal or adaptation of structures in this category is usually acceptable where the work will enhance a related heritage asset.
- Negative: structure of feature that harms the value of a heritage asset. Wherever practicable, removal or negative features should be considered, taking account of setting and opportunities for enhancement.

6.3.13. The Setting of Heritage Assets, published 22 December 2017, gives general advice on understanding setting, and how it may contribute to the significance of heritage assets and allow that significance to be appreciated, as well as advice on how views contribute to setting.

6.3.14. The document sets out the broad approach to assessment recommended by Historic England, in terms of the significance of any heritage assets including development affecting the setting:

Step 1: *Identify which heritage assets and their settings are affected*

Step 2: *Assess the degree to which these settings make a contribution to the significance of the heritage asset(s) or allow significance to be appreciated*

Step 3: *Assess the effects of the proposed development, whether beneficial or harmful, on that significance or on the ability to appreciate it*

Step 4: *Explore ways to maximise enhancement and avoid or minimise harm*

Step 5: *Make and document the decision and monitor outcomes".*

Wigan Core Strategy Local Plan

6.3.15. Policy CP11 sets out that the council will protect the borough's heritage by conserving, enhancing and promoting key heritage assets and non-statutory heritage assets of local interest; prioritising the conservation of heritage assets at risk from decay and use heritage assets positively to strengthen identity and image.

6.3.16. Objective BEL 1 aims to conserve and enhance the borough's built heritage.

Assessing Significance

6.3.17. This section identifies the assets and provides details on their significance, taking account of the NPPF and Historic England Guidance. It then assesses the impact on the significance of these assets as a result of the proposed development.

Chaddock Hall Barn

6.3.18. Chaddock Hall Barn is a Grade II listed, 17th century farm building. It is listed due to its age, stone dressings and carved rich coat of arms.

6.3.19. The barn at Chaddock Hall is in such poor condition that its future must be uncertain although it is subject to a planning application for conversion to dwellings.

Chaddock Hall

6.3.20. Was an altered 17-19th Century house with brick and timber- framing most of which was rendered over.

6.3.21. Chaddock Hall was subject to a serious arson attack in 2014 and the interior was completely destroyed leaving only the walls standing and in early 2017 the remains of the hall collapsed completely with any possibility of restoration highly unlikely.

Chaddock Hall Gardell Wall and Gapiers

6.3.22. A Garden wall and stone gatepiers at Chaddock Hall G.V. II Walls and gate piers. English garden wall bond brick with stone dressings. Quadrangular in plan with gates to south. The walls feature round-topped copings and occasional buttressing piers. The adjoining summer house is of c.1905. Tall gate piers with raised panels in each face and moulded bases, collars and capitals. Cast-iron gates.

Garett Hall

6.3.23. Garrett Hall is a grade II listed Farmhouse of a Timber-framed structure dating from the 17th century which has been largely rebuilt in brick. Timber posts are visible at the rear which has a continuous outshot, and a projecting brick chimney stack. Formerly the house of the Tyldesley family.

6.4 IMPACT ON SIGNIFICANCE

6.4.1. An assessment of significance is a requirement for any application that could potentially affect a heritage asset. Based upon the identification, description, significance and setting of the heritage assets coupled with an understanding of the development proposals as set out earlier, this section assesses the impact of the proposed development on the significance of the heritage assets, in accordance with paragraph 194 of the NPPF.

6.4.2. The following concludes that the proposal will not be detrimental to the character or setting of the listed and non-designated assets and thus their significances will be unaffected.

Chaddock Hall Barn

6.4.3. The proposed development site is at least 200m from Chaddock Hall Barn, with a residential area in the intervening space.

6.4.4. The significance of the listed church derives largely from its age, architectural interest and from its steeple that is visible in views to the church and therefore can potentially be susceptible to visual hanges over a wide area. However, the church has long been experienced within an urban setting

Chaddock Hall Garden Wall and Gapiers

6.4.5. The proposed development site is at least 150m from Chaddock Hall Garden Wall and Gaspiers, with a residential area in the intervening space.

6.4.6. The significance of the listed garden wall derives largely from architectural interest. However, the wall has long been experienced within an urban setting.

6.4.7. On this basis, combined with the distance of the application site and the residential areas separating the site and heritage features, there will be no harm to the significance of the building.

6.4.8. **Garett Hall**

6.4.9. The proposed development site is at least 230m from Garett Hall, with a residential area in the intervening space.

6.4.10. Whilst glimpses of the hall may be visible from parts of the site, these will be largely screened by intervening residential uses, vegetation and the have undergone a wide variety and ever-changing range of uses since their creation to reflect the changes in population, commerce, technology and policy. On this basis, combined with the distance of the application site and the residential areas separating the site and heritage features, there will be no harm to the significance of the building.

6.5 CONCLUSION

6.5.1. It has been demonstrated above that the development of the application site for housing won't result in any adverse impacts upon any nearby listed or non-designated heritage assets. This is also the conclusion reached in the HEA that was commissioned by the Council.

6.5.2. Based on the above assessment, the proposal accords with Core Strategy Local Plan Policy CP 11 and the NPPF, as it will not result in any harm to the listed and non-designated heritage assets in the vicinity of the site.

7 OTHER MATERIAL CONSIDERATIONS

7.1 OVERVIEW

7.1.1. This chapter focusses on appraising the proposed development in the context of technical planning policies and guidance contained in the Development Plan and NPPF.

7.1.2. Policy CP10 of the Core Spatial Strategy states that all development will be required to adhere to high standards of design. Development should have a positive impact and will be expected to respond to scale, density, massing, height, landscape of surrounding buildings and areas in general whilst respecting existing context.

7.2 DESIGN AND SUSTAINABILITY

7.2.1. The NPPF also provides guidance on development and ensures that the design of development incorporates the principles of sustainable development and the need to create better places in which to live and work. Paragraph 130 sets out several design criteria with the purpose being to ensure that design is of a high quality and appropriate for the area in which the development is located.

7.2.2. The proposed development has been designed in accordance with the above guidance;

- The layout, scale and appearance of the proposals have been developed to create a high quality and attractive scheme with integrates well with the wider suburban townscape;
- The elevational treatment has been carefully considered in the context of the site's current setting in order to create a contemporary and attractive appearance;
- The development includes soft landscaping and tree planting which seeks to enhance the sites boundaries;
- The development has been designed to respect and protect neighbouring residential amenity including the neighbours' amenity, identity and character of the area;
- The proposal provides easy access for future users who wish to arrive to by bicycle. The proposal itself incudes cycle parking provision; and
- The development is accessible to all with disabled bays provided.

7.2.3. As such, the design of the proposed development is in full accordance with Local Plan policy CP10 as well as paragraph 130 of the NPPF.

7.3 TREES AND LANDSCAPING

7.3.1. A tree survey prepared by BB Trees presents the findings of the survey and assessment of the quality of the existing trees on and adjacent to the site, based on their current condition and quality. The assessment includes impacts arising from the proposed development of the site on these trees.

7.3.2. Fifteen individual trees and nineteen groups were surveyed. Of which around 5 trees, 8 groups are on the site boundary.

7.3.3. The proposed development necessitates the removal of 7 trees and 6 groups within the site boundary in order to accommodate the building and facilitate the wider development.

7.3.4. Whilst the development involves the loss of trees, replanting is proposed which will result in a significant net gain of trees across the site.

7.3.5. The landscape strategy has been formulated specifically to strengthen the sites boundaries with additional tree planting and hedgerows. The strategy ensures that the buildings will be well screened from the public realm, particularly views from the adjacent existing residential estate and existing and proposed public rights of way. The area to the north of the site has been proposed to improve screening of units 1 & 2 from the adjacent housing while also offering ornamental/aesthetic value to pedestrians and workers in the proposed offices.

7.3.6. The application includes landscaping cross-section drawings to demonstrate how the proposed earth bund will function with fully developed native vegetation atop.

7.3.7. Up to 310 trees in addition to hedgerow planting will be introduced across the site and the site's boundary. Areas of ornamental shrub mix, and meadow will assist in creating a landscaped setting for the warehouse units.

7.3.8. The landscape strategy ensures that once trees and hedgerows are fully mature the building will be fully screened from the public realm and as such visually contained within the site. The landscape strategy is considered appropriate in order to offset the minor impact of the proposals on the wider landscape.

7.3.9. As a result of the above, the proposal delivers significant enhancements in terms of arboriculture landscaping and therefore accords with Local Plan Policy CP12 and paragraph 130 of the NPPF.

7.4 NOISE

7.4.1. A Noise Assessment prepared by Tetra Tech accompanies the submission. The noise report establishes the noise climate in the surrounding area and whether the proposed operations at the site, taken as a worst-case scenario, would give rise to any adverse impacts from a noise perspective.

7.4.2. The report provides a comprehensive overview of the proposal and the operations/plant which are likely to result in noise disturbances. The assessment has accounted for HGV movements, staff car parking activity and fixed pant associated with the development.

7.4.3. Predicted noise levels indicate that they will meet WHO noise intrusion criteria at the nearest sensitive receptors during both the daytime and night-time with windows open or closed. The assessment includes acoustic bunds and boundary fencing associated within neighbouring housing development within the model and concludes the impact on the nearest sensitive receptors will not be expected to have a 'significant adverse impact' on health or quality of life.

7.4.4. Noise levels derived from plant predicted to be equal to existing daytime and night-time background noise. During the construction phase of the development, noise levels at existing noise sensitive properties would be within BS 5228 fixed limit criteria.

7.4.5. In light of the above, the proposal will not result in an adverse impact in terms of noise and therefore the proposal is in full accordance with policy CP17 of the Local Plan and paragraph 185 of the NPPF.

7.5 AIR QUALITY

7.5.1. Tetra Tech have prepared an Air Quality Assessment which forms part of this submission. The assessment work has found that there will be no significant effects on air quality matters, including on ecological and human receptors.

7.5.2. An assessment was undertaken to quantify potential effects emanating from road traffic emissions and construction dust impacts which may arise from the development's operational and construction phases.

7.5.3. Site specific mitigation measures are proposed to deal with construction phase impacts on air quality. With these mitigation measures in places, effects from the construction phase are not predicted to be significant.

7.5.4. The assessment includes a study on the long-term effects associated with the proposed development in respect of Nitrogen Dioxide and Particular Matter associated with traffic. It is considered that modelled results are deemed to be negligible in terms of air quality impacts when combined with proposed mitigation such as those outlined within the Travel Plan.

7.5.5. The proposal will therefore not result in an adverse impact in terms of noise and therefore the proposal is in full accordance with policy CP17 of the Local Plan and paragraph 186 of the NPPF.

7.6 EXTERNAL LIGHTING

7.6.1. A Lighting Assessment undertaken by WSP accompanies the submission. The assessment sets out the proposed external lighting scheme and provides guidance in terms of good practice to ensure obtrusive lighting is reduced.

7.6.2. The lighting scheme is based on energy efficient LED luminaires and seeks to illuminate architectural features of both the buildings and the external landscaping scheme. The external lighting also takes into consideration both the level and uniformity of lighting required for security, CCTV operation, safe movement of visitors, staff and residents to the buildings/landscaping around the site.

7.6.3. The lighting strategy seeks to reduce lighting pollution through mitigation such as preventing upward light pollution through a combination of optimal mounting heights and by utilising low energy efficient LED lighting luminaires that limit glare. The layout and type of lighting used takes into consideration and limits any possible impact on the surrounding amenity and landscaped areas.

7.7 ECOLOGY AND BIODIVERSITY NET GAIN

7.7.1. A phase 1 preliminary ecological survey has been prepared by The Ecology Practice which supports this application. The majority of the site was assessed as being a mixture of poo semi-improved grassland, semi-improved grassland and pockets of dense scrub with species-poor hedgerow.

7.7.2. The assessment included a bat survey, breeding bird survey and Great Crested Newt survey.

7.7.3. Great Crested Newt eDNA surveys returned negative results within the application site. Bat ground Level tree assessments determined that two trees had moderate potential for bat roost presence with other classed as low or negligible.

7.7.4. The breeding bird survey returned signs of breeding on site for singing dunnock and four song thrush.

7.7.5. Mitigation is proposed for both vegetation clearance to avoid impact on breeding birds and bats in the form of qualified licenced ecologist to visit the site 48 hours before clearance works to determine presence. In addition, mitigation proposals include the provision of bat and bird boxes across the site.

7.7.6. A Biodiversity Net Gain (BNG) assessment has been undertaken using the DEFRA Metric 4.0. The proposals would result in a net gain deficit of -10.95 Habitat Units (-17.43% and net gain in Hedgerow Units (+133.51%).

7.7.7. The proposal will not result in any harm to the negligible ecological value of the site or neighbouring habitats and actually delivers enhancements in the form of additional habitat creation as a result of tree planting and landscaping at the site.

7.7.8. The proposal delivers enhancements in terms of ecology and therefore accords with policies CP12 of the Local Plan and paragraph 180 of the NPPF.

7.7.9. The lighting strategy has been carefully generated to ensure the immediate environment has been protected. The development is therefore in accordance with Policy CP17 of the Wigan Core Strategy Local Plan.

7.8 HIGHWAYS, TRAFFIC AND TRANSPORT

7.8.1. In accordance with paragraph 111 of the Framework a Transport Assessment, prepared by Hydrock, has been submitted alongside the application. The application includes vehicle tracking diagrams to demonstrate safe ingress and egress of HGV and vehicles into the site and internal access road.

7.8.2. The assessment sets out that the site demonstrates a good level of locational sustainability being accessible by public transport, walking and cycling.

7.8.3. The assessment indicates that that the development has the potential to generate 112/133 morning and evening peak vehicles trips. The level of peak hour traffic is below DfT significance thresholds and the proposal will not lead to a severe impact to either the existing or the future forecast capacity on the local highway network.

7.8.4. In terms of parking provision, the proposal includes 328 car parking spaces (including provision of 17 disabled bays) and 77 HGV parking bays. The proposal therefore accords with the Council's required standards for a B2/B8 use.

7.8.5. In addition to the above, 60 cycle parking spaces will be provided ensuring any future employees are able to cycle to work.

7.8.6. In light of the above, the development would not result in adverse impacts on the capacity or safe functioning of the highway as a result of the development and that the requirements of CP7 of the Local Plan and Paragraph 111 of the Framework would be met in full.

7.9 ENERGY AND SUSTAINABILITY

7.9.1. An energy statement has been prepared by CPW and is enclosed as part of this application. The statement has conducted an appraisal of the renewable and low carbon technology energy options to be employed at the site once operational in order to align with the requirements set out under paragraph 157 of the NPPF with regards to reducing energy consumption during the lifetime of the development.

7.9.2. The statement concludes that a number of measures are proposed which can have significant impacts in CO2 reduction such as air sources heat pumps as part of the base build and solar mounted PV installation on all units.

7.9.3. The proposals can therefore be considered to be in full accordance with policy CP13 of the Local Plan.

7.10 CRIME IMPACT

7.10.1. A Crime Impact Statement prepared by Design for Security confirms the proposed scheme will be safe and secure.

7.10.2. The statement outlines that currently the service yards of the industrial units will be well secured with a 2400mm high paladin fence, restricting access to these spaces. In addition, it is noted that the public footpath does not pass to closely to the industrial units and does not leave them vulnerable. The route of the footpath is generally linear and well overlooked.

7.10.3. The proposed industrial units are likely to be staffed at all times, reducing the potential for criminal and antisocial activity. There is only one vehicular access point into the site, allowing traffic entering the site to be monitored and restricted easily.

7.10.4. The footprints of the proposed buildings are relatively simple and contain few recesses that could provide concealment for offenders or those antisocially minded. Cycle stands are generally positioned where they can easily be seen from the building and access road, allowing for passive surveillance opportunities.

7.10.5. Car parking areas are generally positioned where they can be seen from the main entrance or the access roads.

7.10.6. The statement outlines a number of mitigation measures and enhancements in relation to boundaries, lighting, vehicular access arrangements, perimeter fencing and service yards which could be implemented across the site and unit itself to increase security. Where possible, these measures have been included within the design and will be implemented once the development is occupied.

7.10.7. In this respect, this scheme accords with paragraph 92 of the NPPF which highlights that development should create safe, inclusive and accessible places which promote health and well-being.

7.11 FLOOD RISK AND DRAINAGE

7.11.1. A Flood Risk Assessment (FRA) prepared by BE Design accompanies the application. It investigates the potential flood risk impacts of the proposed development and is considered proportionate to the degree of flood risk and to the scale, nature and location of the development.

7.11.2. The flood maps provided by the Environment Agency (EA) locate the site within Flood Zone 1, i.e. and defined as having an annual probability of fluvial flooding of less than 1 in 1000 in any year (<0.1%) and is classed as less vulnerable therefore development is appropriate.

7.11.3. The drainage strategy responds to the relevant policy and guidance and is based upon an assessment of the existing site connections, the FRA and site investigations.

7.11.4. Existing attenuation basins at the site feature as part of the wider landscape strategy and will assist with the management of water across the site. A new surface water drainage system will be constructed to convey runoff from the impermeable surfaces on the four building units including access road. The outline foul water drainage strategy is to connect to the existing foul drainage

network of the area. There would be very limited increase in the foul water discharge rates generated by the new development.

7.11.5. The above is considered an acceptable solution in relation to drainage and will ensure that the development does not create any additional flood risk issues for the local area.

7.11.6. The proposed drainage design and approach to flood risk mitigation therefore accords with policy CP16 of the Local Plan and paragraph 167 of the NPPF.

7.12 GROUND CONDITIONS

7.12.1. The application is accompanied by a Desk Study Risk Assessment (Phase 1 Site Investigation) and Due Diligence Report (Phase 2 Site Investigation), both prepared by Discovery Investigation. A Coal Mining Risk Assessment has also been undertaken for completeness.

7.12.2. The desk study provides an overview of the potential hazardous substances or conditions on or the near the site.

7.12.3. The assessment considers that there could be potential contaminants but these are typically associated with and considered to be representative of the site's former historical agricultural uses. The assessment sets out that it is considered there is a low-moderate to moderate risk of contamination and that further surveys should be undertaken.

7.12.4. The Phase 2 Site Investigation provides details of trial pits/ground samples taken in order to better assess the ground conditions and makes a series of recommendations, which can be secured via planning condition.

7.12.5. Subject to the undertaking of the recommendations set out in the forementioned technical documents, the development proposals accord with the requirements of paragraph 183 of the NPPF.

8 S106 HEADS OF TERMS

8.1.1. At the time of writing, based on feedback received during pre-application discussions with the Council, it is anticipated that any S106 Agreement associated with the application will be limited to the provision of a contribution towards the upgrade and re-validation of MOVA at the junction of A580/Chaddock Lane.

9 PLANNING BALANCE

9.1.1. This application seeks full planning permission for the development of a new employment site of up to 32,826 sqm (353,336 sqft) B2/B8 floorspace (including ancillary integral office space (Use Class E(g)) with associated car parking and service yard; new internal access road; diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10; and, associated engineering, infrastructure and landscaping at Land at Astley Park Way (off Chaddock Lane).

9.1.2. The site benefits from an allocation as a Primary Employment Area (Ref. EM1A) within the Wigan Local Plan and the proposals will help meet the current and changing needs of potential occupiers on this allocated Primary Employment Area within the Local Plan.

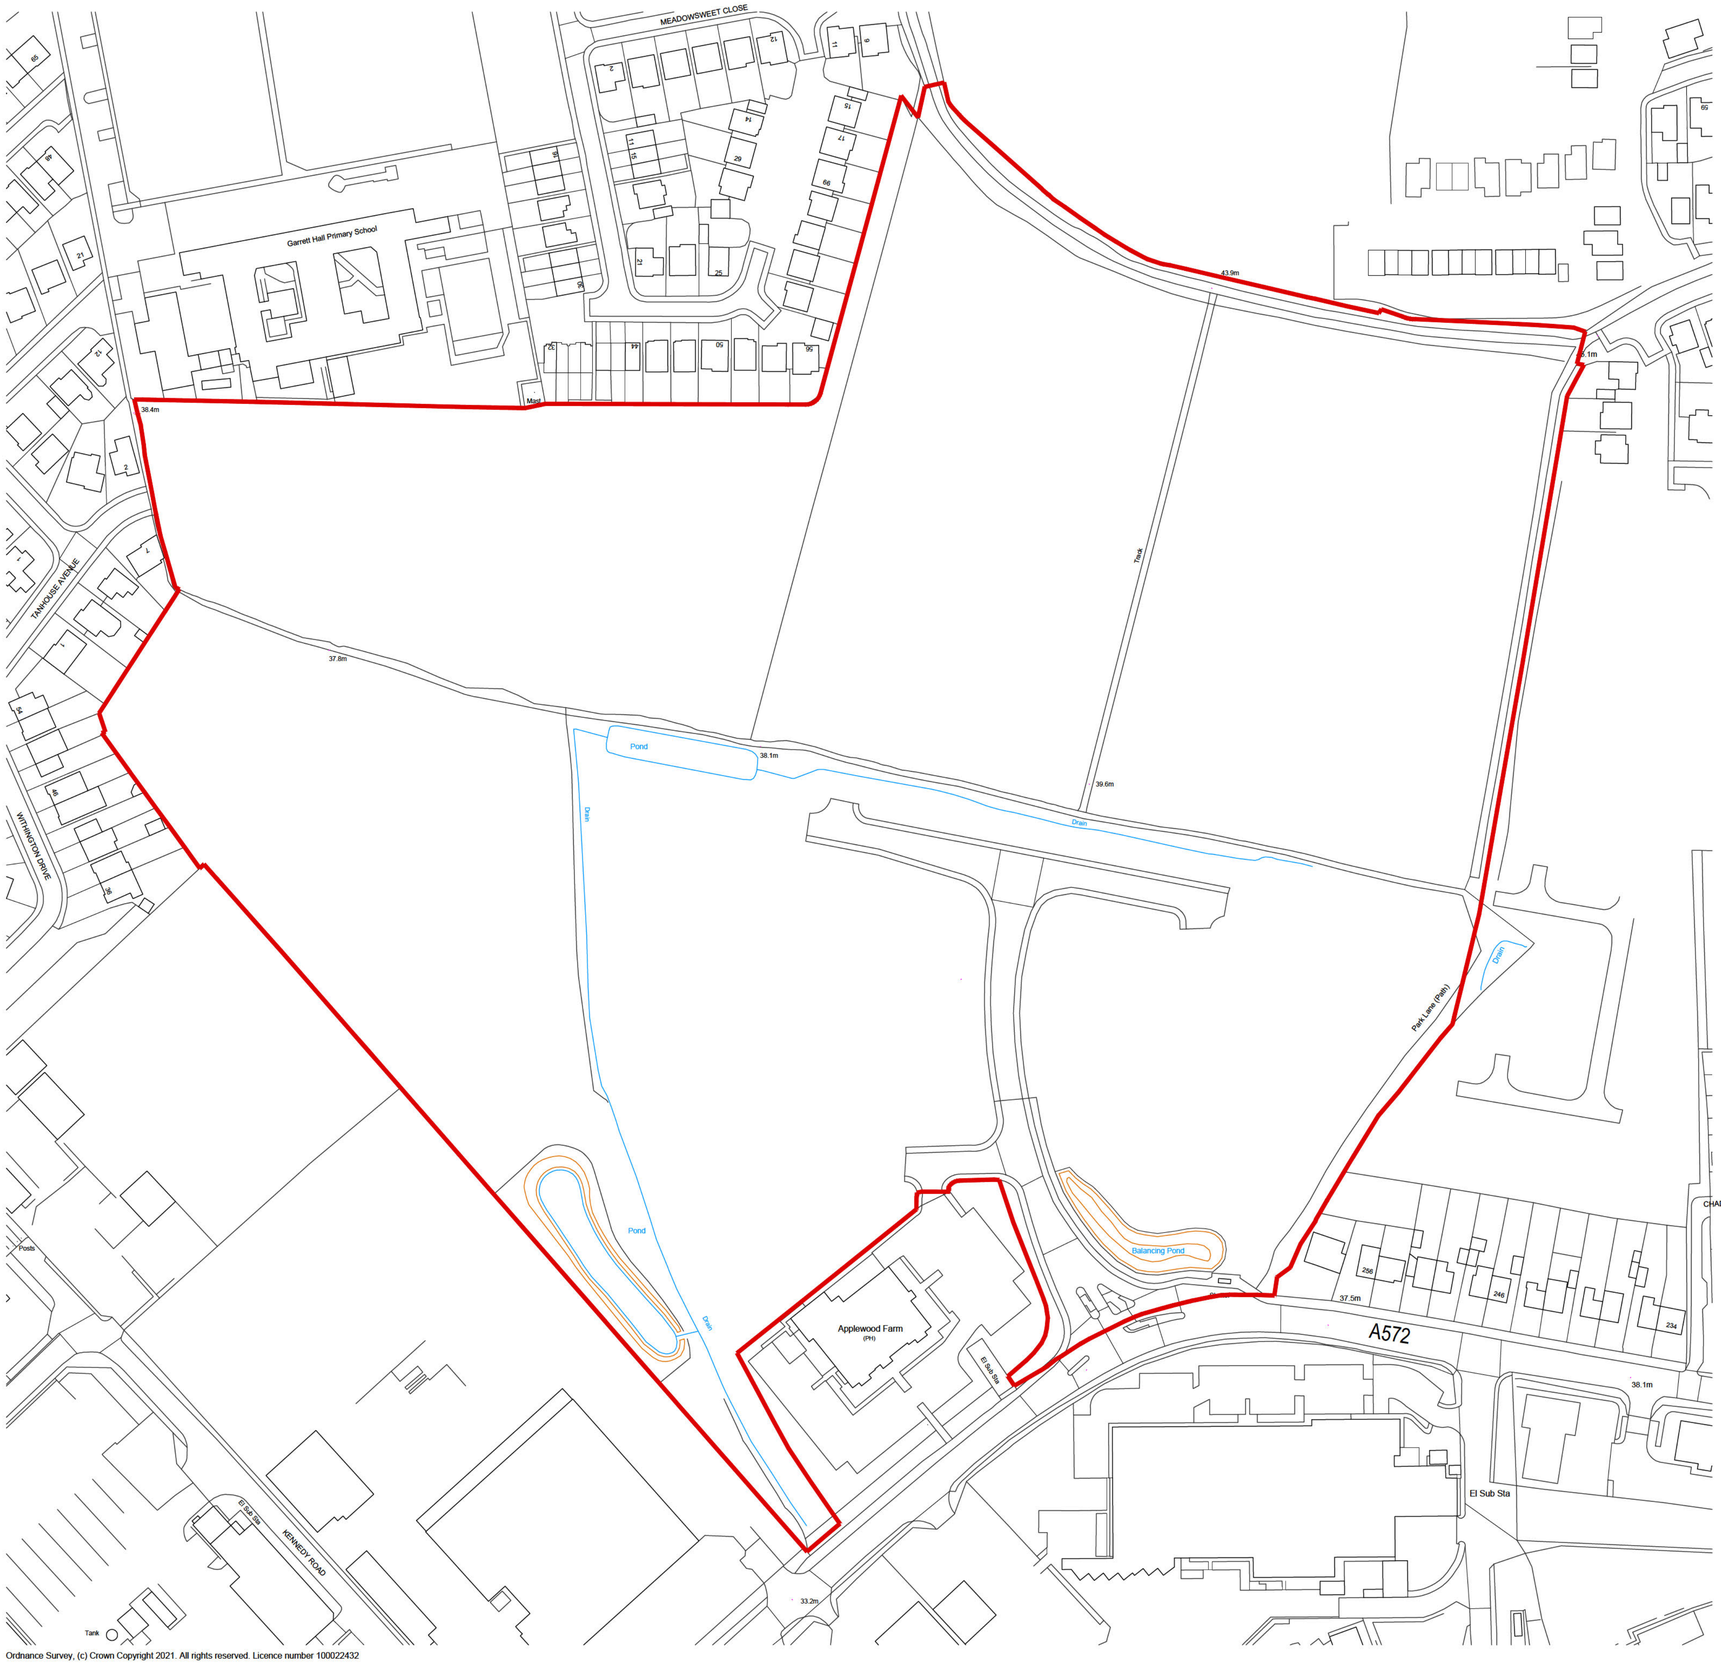
9.1.3. The NPPF is focused on building a strong and competitive economy, and supporting sustainable development – the proposed development wholly aligns with these principles.

9.1.4. Furthermore, the proposals are considered to accord with key Wigan Local Plan Core Strategy planning policies SD1, SP1, SP2 and CP5 and saved policy EM1A from the Wigan UDP.

9.1.5. There are a number of significant benefits associated with the development including;

- Delivery of a range of new, logistics based flexible employment units to diversify employment land provision in Astley;
- Significant economic benefits including;
  - Creation of temporary employment during the construction phase;
  - Full-time employment once operational;
  - Additional expenditure in the local economy once operational; and
  - Promoting further investment and retention of industry within Astley;
- Efficient redevelopment of an allocated site which makes optimal use of the site and reduces the need for additional employment sites to be released;
- Social benefits through significant job creation both during construction and once operational with a range of positions created. New employment would be accessible to the local community; and
- Environmental benefits such as new landscaping, tree planting and footpath improvements throughout the site.

9.1.6. In addition to the above benefits, the application is supported by a suite of technical assessments that clearly demonstrate that the proposed development is technically and environmentally acceptable in terms of design, highways impact, flood risk/drainage, ecological impact, air quality and noise.



9.1.7. The principle of development is acceptable, and the extensive technical assessments demonstrate that the proposed development clearly constitutes sustainable development.

9.1.8. As such, the proposal is in accordance with the Development Plan and, in line with paragraph 11 of the NPPF, should be approved without delay.

CONSULTATION LETTER ISSUED TO LOCAL RESIDENTS

Public

Dear Occupier

FEEDBACK INVITED ON DEVELOPMENT PROPOSALS AT LAND AT ASTLEY PARK WAY (OFF CHADDOCK LANE), TYLDESLEY, WIGAN

We write on behalf of PLP to inform you of plans to develop land at Astley Park Way (off Chaddock Lane), Tyldesley, Wigan, M28 1DP for a proposed logistics and warehousing development.

As a local resident, we wanted to share details of the proposals with you before submitting the application to Wigan Council. We are keen to hear your views.

PLP

PLP is a specialist UK logistics and industrial property business with a proven track record. PLP is committed to delivering a high-quality logistics and warehousing development to accommodate flexible industrial, storage and distribution uses with ancillary office spaces, service yards, landscaping and parking areas to meet the current and changing needs of commercial enterprises.

Site background

The site is allocated as a Primary Employment Area within the Wigan Local Plan and is therefore an appropriate location for such development. The site boundary is shown on the enclosed plan.

You may recall that outline planning permission was granted previously at the site for mixed employment and residential development (approved in February 2017), with the residential development associated with this permission now mostly constructed.

The approved employment development element has since expired; therefore, we are seeking a new planning application to enable the development to come forward in the short-term.

Overview of the proposals

The proposed development has been designed to take into account site constraints and to mirror the development parameters approved in the expired planning permission as far as possible.

- Extensive landscaping is proposed including the formation of landscaped mounds with tree planting on top along all site boundaries.
- Existing public footpaths passing through the site will be diverted and upgraded to ensure that public connectivity with the surrounding area is not only maintained but significantly improved for all users.
- The site will be accessed from the existing junction at Chaddock Lane to the south and all of the warehouse service yards will be internally facing to ensure that no service yards face towards the site boundaries or residential areas.

We have been working closely with planning officers to bring an application forward to develop the site and intend to submit an application to Wigan Council shortly.

A Proposed Site Masterplan providing further details of the layout of the proposed development, diverted/upgraded footpaths and extensive landscaping proposals is attached to this letter.

The next page sets out the key benefits of the proposals and how you can provide feedback.

Key benefits of the proposals

The development proposals will deliver the following benefits to the Borough, most of which will be experienced at the local level:

- **Economic benefits:**
  - The proposals will deliver a high-quality and attractive employment development which will be appropriate within its surrounding context and provide an efficient use of land, taking advantage of the already built access road (Astley Park Way) and in doing so help the original aspirations of Wigan Council's employment allocation to be realised.
  - The proposal will create temporary and permanent economic benefits in the form of up to **500 new jobs** with the potential to also generate employment throughout the supply chain and bring investment and additional spending to the local economy;

- **Design quality and ensuring a sensitive site layout:**
  - The proposal will feature a carefully designed modern employment development that respects the local character, the amenity of nearby residents and that seeks to maintain and improve the permeability of the site currently provided by the public footpaths and bridleways passing through the site.
  - The masterplan has been sensitively developed with constraints in mind and through an extensive landscaping scheme and thoroughly considered architectural layout will ensure that the development is appropriate to its context and offers benefits to the community.

- **Landscaping proposals**: the landscaping proposals for the development will include the provision of:
  - Planting of **310 new trees** of which approximately half (155 trees) will be at a height of 1.75m to 3.5m at the point of planting and will mature and grow taller over time;
  - Significant areas of woodland, thicket, ornamental, wildflower and grassland across the site, much of which will surround the proposed diverted and upgraded footpaths;
  - Provision of 2,215 linear meters of new hedgerows; and
  - Provision of landscaped mounds along the site boundaries, ranging in height from 2.1m – 4.1m in height, which will then have woodland tree planting on top to create a considerable landscaped buffer to provide visual screening between the warehouse buildings and neighbouring residential properties.

You can contact myself via [redacted] (Mon-Fri during office hours) or via email UKPlanningComment@wsp.com with comments.

Please provide any comments by **9 October 2023.**

There will, of course, also be a further opportunity for interested parties to formally comment on the planning application in due course, once submitted to Wigan Council.

I trust this is helpful. Please feel free to get in touch if you have any further queries.

Yours sincerely

REF / 79

Dear Sir/Madam

This letter is to let you know about the following application that has been submitted:

Application Number : A/23/96226/MAJOR
Location : Land At Astley Park Way Worsley
Proposal : Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works

The application forms and plans can be viewed on our website two working days from the date of this letter at https://planning.wigan.gov.uk/online-applications/ .

We have a limited time to consider this application, so any comments you wish to make should be submitted by using the online system by **1st December 2023.**

If you decide to send comments, no acknowledgement will be sent and we are unable to enter into any correspondence. Please note any comments you make will be placed on a publicly available case file and will be summarised in reports that will be available on the Council's website. Your personal details will not be included in the reports.

You can track the progress of the application, including whether it is to be considered by Planning Committee and the final decision, using our online system.

Information is available to explain the planning process in more detail and this can be found at https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/About-the-application-process.aspx

Yours faithfully

You don't often get email from [redacted]@parliament.uk. Learn why this is important

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Dear Mr Thatcher

Further to the last Wigan MPs meeting at the Town Hall, Michael has received the below email from the Action Group representing the residents impacted by the PLP development in Astley.

Please can you confirm that the residents will be receiving a response as soon as possible.

Please can I also ask that Michael be sent a copy of this response.

Kind regards

Subject: Awaiting response to Open Letter

Aidan,

On Wednesday last week, we published an open letter to Wigan Council accompanied by a video highlighting just some of the issues we have faced in the planning and construction at Astley Business Park.

With more than half a million views and thousands of supportive comments / likes, it's very alarming that the one comment or reply we haven't received is from Wigan Council.

Can you please address our letter, which is as follows:

Open Letter to Wigan Council & PLP

Wigan Council and PLP, you have betrayed us.

Our community is being forced to live in the shadow of four giant warehouses, 18 metres high, dumped next to our homes and our schools.

It is destroying people's lives.

Neighbours who never needed medication are now on anti-depressants. People are lying awake at night from stress. Families sit at the kitchen table in tears because their homes cannot be sold. Children breathing in dust clouds are already suffering with health problems, and they will now grow up under floodlights, with diesel lorries thundering past 24 hours a day, seven days a week.

And you let this happen.

The maps given to the Planning Committee did not even show many of our houses. It was as if we did not exist. Ninety-six objections were submitted, yet the officer's report claimed there were only 70.

A field full of wildlife and mature trees has been ripped apart, and the warehouses are now dangerously close to homes, raising serious fire safety issues.

And the worst thing. At the planning meeting, those who spoke up to object were publicly laughed at by the councillors who are supposed to represent them. One even suggested 'ask them to turn the noise down after 8pm'.

You have left us without any communication or support to deal with the impending 24/7 HGV noise, reversing alarms and pollution. Floodlights blasting into bedrooms. There have been cracks in homes, sales falling through, house values hit, and for what? A Whistl factory powered by automated robots, which will supposedly bring jobs to the area.

To add insult to injury, nearly £200,000 of "biodiversity money" from PLP, has gone to Bedford Colliery, miles away. Not a penny of it in our area. We have lost our fields and wildlife, and are left with grey prison walls and a concrete jungle.

We want answers. We demand accountability from the people who signed this off and not simply the suggestion of planting some saplings that may make a small difference in 30 years' time.

We want to know why our objections disappeared, why our houses were missing from the maps, why the consultation was rushed and handled so badly.

We want proper fire safety and environmental checks.

And finally, we want a real solution going forward.

We are not going away. We are over a thousand strong, and have the nation backing us.

You can bulldoze fields.

You will not bulldoze us.

Hi Aidan,

Janet has now responded. Are any amendments to the letter required following Janet's response please?

Could you please confirm that the attached letter (PDF) is to be sent together with the PDF of the neighbour report?

Many thanks and regards,

Dear Astley Warehouse Action Group,

Thank you for taking the time to share your questions and concerns regarding the warehouse development. We deeply value the perspectives of our residents and are committed to listening carefully and responding with transparency and respect.

As you may be aware, planning permission for the development was granted by our committee during the summer of last year, following a comprehensive review process. In light of the issues raised, we have since carefully revisited the steps taken and remain confident that all actions were strictly aligned with the relevant planning legislation and regulations. Nevertheless, we remain committed to full accountability and transparency, and we are eager to work closely with you to provide assurance and address any ongoing concerns as the project progresses.

As part of this transparency, please find below the answers to all of the questions posed. We have addressed each of your questions in turn:

You told residents that you 'followed the process'. Do you accept that following process is not the same as following good practice?

Our planning decisions are guided by a national framework of legislation, policy, and guidance, designed to ensure fairness, transparency, and consistency. We recognise that good practice means not only following the rules but also acting with integrity and care to balance competing interests in our community.

What lessons have you taken from how this application has affected trust in Wigan Council?

Wigan Council, Place Directorate, Wigan Town Hall, Library Street, Wigan, WN1 1YN.
Phone: 07917 642777 E-mail: aidan.thatcher@wigan.gov.uk
www.wigan.gov.uk

We understand that our decisions may not always align with the wishes of every resident, and that this can impact trust. We are committed to being honest and open about our reasoning, and we will continue to engage with residents to explain how and why decisions are made. We see every interaction as an opportunity to build stronger relationships and to learn from your feedback.

Can you explain how you have come to the conclusion that you carried out an extensive local community consultation?

In accordance with statutory requirements and good practice, we directly notified all properties adjoining the site. We welcomed and received feedback from a significant number of these neighbours, as well as from many others in the wider community. We believe this level of engagement shows that residents both near and far had the chance to make their voices heard, and every comment was carefully considered as part of our assessment.

Can you give a concise overview of what has happened on this application, what's outstanding, and what the next 12 months look like, including enforcement and monitoring?

The planning application was submitted and validated in November 2023. After a thorough assessment, it went before the Planning Committee in June 2024, where an Officer recommendation for approval was presented. The Committee resolved to grant permission, which was formally issued in August 2024 following the completion of a legal agreement. Over the next 12 months, we will focus on closely monitoring compliance with the approved plans, all conditions and other requirements and will take enforcement action if necessary to uphold our standards and the interests of the community should any planning breaches be found.

Over the last number of months, Officers have determined various applications relating to conditions. All of these are available to view on the Council website.

The Council has determined one Non-Material Amendment application (ref: A/25/098865/NMA); the details of this are on the Council's website.

The Council currently have one pending Non-Material Amendment application (ref: A/25/099520/NMAS). We also have one pending condition discharge application (ref: A/25/099766/CON) and a pending application for the display of advertisement (ref: A/25/099628/ADV). The details of all these applications can be found on the Council's website.

Wigan Council, Place Directorate, Wigan Town Hall, Library Street, Wigan, WN1 1YN.
Phone: 07917 642777 E-mail: aidan.thatcher@wigan.gov.uk
www.wigan.gov.uk

We will continue to monitor the site as and when necessary and will undertake enforcement action if necessary.

Who quality-assured and signed off the officer report before it went to committee? Who reviewed it and when. Please provide evidence of what was discussed during those reviews.

The Planning Committee report was reviewed by two managers within the Development Management service, who have access to the full case file. This process took place within 10-14 days before the publication of the Committee agenda.

Do you accept that the officer's report under-represented the scale and impact on homes and the school?

The officer's report and the presentation given to the committee, in addition to the online application case file, clearly set out the plans which included site maps and detailed, scaled drawings – and detailed the scale of the development and accessed the impact on neighbouring buildings sufficiently.

Councillors depend on the officer's report, but public objections made up just 3.5% of that report. The evidence and real-life impact (94 objections on average 500 words long) were sterilised into a few bullet points. Does Wigan Council accept that this distorted the balance of information before the vote or are councillors expected to read 55,000 words of objection on the portal before the hearing in addition to the officer's report?

Each objection is reviewed and set out in the report. It is also reflected in the analysis that led to the recommendation, and the matters were raised and discussed during the committee meeting.

Were the planning drawings submitted before or after the planning officer attended the site. If the drawings were submitted before the site visit did the planning officer not notice the drawings were incorrect as houses were missing? If the drawings were submitted after the site visit did the planning officer make reference to this with the applicant to rectify the issue?

The planning drawings were submitted prior to the initial planning officer site visit. The submitted drawings are not required to provide precise details on the land surrounding the planning unit (red edged site). The Officer's report details the surrounding area and assesses the impact of the development on

all surrounding land users, acknowledging the presence of residential properties close to the site boundaries.

Do you accept that housing being missing on planning maps within metres of the warehouse is a critical error?

It is understood that this is a reference to the maps submitted by the applicant, the developer. It is acknowledged that the base map used by the applicant in a number of drawings forming the planning application did not show some of the houses to the east of the site. The Council believes that this was because the base map used by the applicant pre-dated construction of these houses. There is no evidence that this was a deliberate attempt to conceal the relationship between the proposed buildings and these houses, and there is a large amount of other material, both within the application pack and the officer's report to Committee, that does clearly show these houses. This includes other plans, aerial photos, and (importantly) the cross-sections used to help appraise the relationship between the buildings and the houses and the effectiveness of the proposed landscaping.

Was a video of the site shown to the committee. Did this indicate the height of the structures?

No video was shown to Planning Committee

What timeframe did the committee receive to review the application? How many other applications had to be reviewed in that time?

In line with the statutory requirements, agendas and reports for Planning Committee are published no later than five clear days before the meeting. The agenda for the June 2024 meeting comprised three applications including this one.

You appear to have the view that the development is 'on-balance acceptable'. Why was the clear harm to the community not given enough consideration and what threshold would not have been acceptable?

The assessment of the application related to the facts of the case which is fully detailed within the committee report. It is not possible to speculate on other scenarios, and the statutory requirements are to make an assessment on the basis of the submitted development.

Research shows that warehouses of the scale you have approved create far fewer jobs per square metre (often one job per 130–150 m²), compared

with smaller industrial units that generate up to five times more employment density. Was this considered when approving the 18 metre structure?

The officer's report makes reference to estimated levels of employment within the development and arising in the wider economy as a result of it. The Council is obliged to determine the application before it, and cannot consider other hypothetical forms of development or recommend alternative designs.

What volume are the warehouses compared to the volume of those proposed in 2017.

The 2017 planning permission was in outline only and did not fix any building positions, uses or volumes, therefore it is not possible to undertake a comparison. The 2017 permission allowed for any or all of office (Use Class B1), general industry (Use Class B2) and warehousing / distribution (Use Class B8). The 2017 outline permission would have allowed scope for a development very similar if not identical to the one now approved to be proposed through a Reserved Matters application.

What negotiations took place between the planning officer and PLP to reduce the height, footprint or orientation of buildings prior to submitting plans to the public to ease the impact on the community? If none, why not?

The Council can only negotiate changes to a proposed development where those changes are needed to make the development comply with local or national planning policy. In this instance the proposal as submitted complied with policy in respect of building positions, scale and massing, and so no changes to the development were sought in these regards.

You stated there were 'iterations of plans' between public planning submission and the council decision meeting. What changes have improved the outcome for residents?

The initially submitted and amended plans are available to view on the Council's website.

Why was the industrial element of the 2017 outline plan allowed to lapse?

The Council has no control over this – the question of whether to bring forward reserved matters applications was a commercial matter for the private landowner.

Wigan Council, Place Directorate, Wigan Town Hall, Library Street, Wigan, WN1 1YN.
Phone: 07917 642777 E-mail: aidan.thatcher@wigan.gov.uk
www.wigan.gov.uk

Once the 2017 residential element was dispatched, why was the new full planning application of 2023 so unsympathetic and incongruous to the houses? What changed?

See earlier response – the 2017 outline did not fix building positions, scales or massing (or uses).

Is Wigan Council aware of any motivation to let the industrial unit plans lapse to ensure the new surrounding houses were purchased at a high market value?

No.

Why was no Environmental Impact Assessment or LVIA required on a development within a few metres of so many homes and a school? Who made that decision, and how did you come to that decision?

The Council did not require an Environmental Impact Assessment (EIA) or a formal Landscape and Visual Impact Assessment (LVIA) for this development, as it was determined that the potential impacts could be appropriately assessed through the standard planning application process and the supporting documentation submitted.

While the development exceeds the threshold set out under Schedule 2, Category 10(a) of the Town and Country Planning (Environmental Impact Assessment) Regulations 2017, this does not in itself trigger the requirement for an EIA. For Schedule 2 developments, the need for an Environmental Statement is subject to a judgement as to whether the proposal is likely to result in significant environmental effects that require separate assessment. In this case, it was considered at that stage that the proposal did not constitute EIA development, and the Council was content to validate the planning application without an Environmental Statement.

Visual impact was dealt with through information in a suite of documents, including the Planning Statement, Design and Access Statement, Landscape Statement, Landscape Plans, Site Sections, and other drawings, that collectively addressed visual and landscape impacts. There is not a requirement for a standalone document to be submitted if the Council is satisfied that the relevant information is contained elsewhere. In this instance the Council is satisfied that the information provided within the suite of documents was sufficient to assess the proposal's effects.

Why were drawings accepted that omitted existing homes? Was that error disclosed to the committee before the vote given it impacted on the reality of the plans? (Many public objections raised this issue and even those comments were misrepresented in the officer's report).

See earlier response. It is acknowledged that the base map used by the applicant in a number of drawings forming the planning application did not show some of the houses to the east of the site. The Council believes that this was because the base map used by the applicant pre-dated construction of these houses. This issue was referenced in the officer's report to Committee (pages 132 and 133), and plans which showed these houses in situ were used in the officer presentation to the planning committee.

Do you feel enough was done to educate the committee on the impact of the warehouses prior to their vote?

Members of the planning committee receive training to ensure they are able to interpret and make decisions on planning applications. Committee received a detailed presentation from the planning officer that included numerous photographs of the site and surrounding area, plans depicting various aspects of the development, and cross-sections showing the relationship between the development, the proposed landscaping and residential properties adjacent. The Committee also had the full officer's report, and the ability to view any part of the full planning file.

Please provide the notification list, addresses, distances, and dates sent of the planning notifications. Was the school formally consulted?

Yes the school was formally notified by letter on 7/11/2023.
A list of all addresses notified of the planning application when it was first received is appended.

You said you followed legislation, do you agree that good practice required in-person engagement with affected residents?

Like the majority of Councils, the Council does not as a matter of practice arrange direct in person consultation with residents regarding planning applications. The number of objections made on a particular issue is not of itself a material planning consideration. The Council is satisfied that the officers and Planning Committee were aware of the comments that had been made regarding the scale of the buildings and their relationship to nearby houses, and took these factors into account in their decision.

What provisions were made to ensure that blind, disabled, and elderly residents were properly informed about the development. Given the limited public notifications, it's important to know whether the council made any effort to make the consultation accessible to everyone in our community.

Consultations were conducted via letters, site notices, and (where applicable) press advertisements. We strive to ensure accessibility for all residents and offer alternative communication methods where needed.

If you say 99 letters were sent, and 94 objections submitted (a 95% rate of letters v objections), many citing clear errors in plans and seek further information - why did the planning officer who collated them not pick up on the errors / key issues / impact?

The officer's report, committee presentation, and online case files included comprehensive plans, site maps, and detailed scaled drawings. All objections were considered and summarised in the report, with full representations taken into account in the assessment and recommendation.

Why were 70 objections reported when there were 94 objections + 2 neutral.

The Council reports objections on a per-address basis. As noted above, the number of objections or comments on a particular issue is not of itself a material planning consideration.

Has Wigan Council communicated with or offered guidance to Garrett Hall School's employees in any way, relating to the Warehouse's development plans or external communications.

The Council consulted Garrett Hall School about the application in November 2023. The Council has not received any requests from the school for guidance, but we have provided communications and media advice to the school to ensure they are supported.

Please provide details and dates of visits made to the site by the planning officer, any other council officials, prior to the planning permission being proposed.

The case officer visited the site on three separate occasions during consideration of the application: on receipt of the application in November 2023, in January 2024 and in May 2024.

What criteria were used for the councillors to not hold a site visit? Did any member propose one? Given the knowledge and potential impact in the area, why did the planning officer or those signing it off not advice the Chair of the committee to recommend a site visit?

It is not common practice to arrange site visits prior to planning decisions. When they are it tends to be when i) a member of Committee proposes a valid motion during the meeting requesting one, ii) that motion is seconded so as to go to a vote; and iii) a majority of Committee vote that a visit should take place.

Given councillors could not rely on first-hand context, is it possible they lacked a full understanding of scale and proximity?

The Council believes that members of the Committee had an accurate understanding of the site and its context; if they had felt that they did not then it would have been expected that a motion would be proposed for a site visit or to defer the application. All information was available for Councillors to view on the Council's website including plans, sections, neighbouring representations.

Two Independent councillors objected, the remaining Labour councillors approved it. Were the Labour Councillors on the committee advised or whipped in any way to approve this development?

The voting pattern described above does not reflect officers' notes of the meeting, or other information that they have seen regarding the outcome of the vote. These show that 12 members voted to approve, one member voted against and one abstained. There is no evidence to substantiate an allegation of whipping of Committee members.

Approved planning documents show 3-4m bunds, but residents report large gaps in bunds and a significant height difference in many places. Please provide details of the current plan with bunds. When will you complete an as-built survey and certify compliance?

The construction phase has not yet been completed and there is no requirement on the developer to complete the bunds at this stage. Construction is due to be completed by February 2026 and if any concerns remain regarding compliance with approved plans, Officers will continue to attend the site to investigate this matter further as the development progresses. It should be noted that the height of the bunds (as well as the

height of the buildings) is to be measured relative to the level of the ground within the development site, which may differ from that of the surrounding area.

Given the clear impact that now exists within the community, what will Wigan Council do to compromise and find a solution to win back the trust of the community they represent?

The Council has confirmed that planning permission was properly granted. This was not challenged through judicial review within the available window. Wigan Council is keen to work with residents, to listen deeply and do what we can to alleviate concerns.

Current landscaping plans show that many of the trees planted will be much smaller when planted. What will be in place to ensure the community is protected from the visual, light, sound and pollutants in the 20-50 years it takes for those trees to grow?

The landscaping to be planted includes trees of a mixture of sizes, including semi-mature specimens approximately 4.5 metres in height. This will provide some immediate softening of the development, but it is accepted that it is not feasible to provide complete screening of the development from the outset. The trees do not form any part of the technical mitigation for the development in relation to noise or light spillage.

Many of the trees detailed are deciduous species, meaning they will have no leaves for 6 months of the year. Has the impact of this been considered?

The trees are a mix of species including those native to Britain. Even when no foliage is present the trees will perform a function in breaking up the appearance of the buildings.

Does the proposed planting plan show rates of growth as trees planted on bunds take longer to get established because of water running off making growing conditions drier and therefore slowing growth? How long would it take for the trees to reach say ten metres in height?

The trees will be planted in appropriately specified pits, and we would not expect their growth to be impacted by their position on sloping bunds. Trees commonly grow on sloping ground in natural settings.

Does the landscaping plan require replanting of any failed trees and at what height?

Yes, like for like replacements are required for a period of 30 years.

What enforcement has taken place by Wigan Council since building has commenced and when?

The planning enforcement visits have not identified any breaches of planning control, and therefore no formal enforcement action has been taken.

What action has been / continues to be taken on dust control and water supply? Who is monitoring and how often?

Regular site visits have been conducted, with no breaches of planning control identified. Officers remain vigilant and will respond to any concerns regarding compliance or environmental impacts such as dust control.
Water supply / pressure is a matter for United Utilities and any concerns would need to be raised directly with them.

You said officers visited 'multiple times'. Please provide that site-visit log with dates and findings.

15/052025 – No breach of CEMP
29/05/2025 – No breach of CEMP
25/07/2025 – Frame heights and location of Units 1 and 2 correct.
11/09/2025 – No breaches identified
30/09/2025 - No breaches identified

What is the status of fire strategy and hydrant provision? Will occupation be prevented until GMFRS confirm compliance?

The detail of firefighting arrangements, hydrant positions and so on is dealt with through the Building Control regime rather than Planning. Developers have the option to use private Approved Inspectors to undertake Building Control assessment and inspections, and in this case the Approved Inspector dealing with this development is:

SOCOTEC Building Control
SOCOTEC House
Bretby Business Park
Ashby Road
Burton Upon Trent
DE15 0YZ

In terms of fire regulations, Building Control ensures that the fire safety design complies with the relevant requirements of the Building Regulations, particularly Approved Document B. This includes assessment of means of escape, fire compartmentation, boundary conditions in relation to fire spread, fire detection and alarm systems, and access for firefighting. For this development, the Approved Inspector will be responsible for reviewing and approving the fire strategy and as part of that process, including undertaking consultation with Greater Manchester Fire and Rescue Service to ensure that operational requirements are met.

The Fire Site Boundary Plans was drawn in 2021, but consultation with the Fire Service didn't start until 8th September 2025. Nearly four years later, by which time the warehouse structures were already built. GMFRS only have 15 working days to respond. These warehouses are dangerously close to our homes and the junior school, if a fire like the Cannock warehouse fire in May 2024 happened here, the consequences could be catastrophic. Can you explain this late consultation, do you accept responsibility for this late consultation, and do you recognise the danger it poses if a fire was to break out?

See above in relation to Building Control.

Has United Utilities confirmed firefighting flows won't affect residential supply? Please publish the correspondence.

Water supply / pressure is a matter for United Utilities.

You have permitted 24/7 operations and lighting. What reassurances will you give to the community that this will not impact their quality of life given the details provided about bunding and landscaping above?

The application was assessed on the basis of 24/7 operations and was considered acceptable with the proposed mitigations and management measures in place. These include consideration of the location of the site and site access on the fringes of an existing and established industrial area, the internal site arrangements whereby each of the proposed units faces inwards and so all associated activity would be focussed within the site as opposed to those areas closest to local residents, and the bund which extends along all sensitive boundaries of the site.

Will you require PLP to route HGVs via the A580 only and publish a routing plan?

No, it was not found during the Council's assessment of the application that such a restriction was necessary. Use of the A580 is the most likely/logical route for HGV traffic, given the location of the site.

Will you implement parking permits on the residential streets surrounding the Business Park to prevent parking issues?

The Council did not identify any parking issues during our assessment of the development given that level of on-site parking is being provided.
However, if residents wish for parking permit holders only to be implemented they can apply via the Council's website.

How much weight did officers give to land-value or 'council revenue' versus community impact?

The land is privately owned and so there is no land value receipt for the Council as a result of the development. The Committee report outlines a number of financial considerations pertaining to the development, including the potential benefit to the local economy. The way that various factors were balanced is set out in the committee report.

Why was biodiversity offset money spent away from Astley? Will you review that allocation?

The national legislation relating to biodiversity net gain is very prescriptive as to the type of works required to improve habitats, and following discussions with the Council's Greenheart team no suitable site in Astley was identified.

How Bedford Colliery was chosen as the recipient?

This followed lengthy discussions with the Council's Greenheart team who identified this area as a suitable location.

Given Bedford Colliery closed in the 1960's and the residents near to Green Lane couldn't tell us where Bedford Colliery was, please detail the specific area that will benefit of this biodiversity funding.

Bedford Colliery Reclamation Land Holding (known more commonly as Bedford Colliery) is located between Green Lane and Clough House Drive. The site was reclaimed and landscaped following the closure of the surrounding coal mines. Today, the site is managed for its biodiversity value and as accessible quality greenspace for the local community. The Council is aware

of a video circulated online, which shows a different area. The plan below shows the correct area.

Will you commission an independent review of this application's handling and publish it?

It is our view that the decision was made in accordance with the processes outlined in planning legislation. In addition, no legal challenge was made within the statutory period. However, we will be undertaking an independent audit of the application's handling and are committed to publishing the outcomes.

If material errors are found, will you add conditions or pursue revocation if necessary?

Planning permission was granted and not subject to any legal challenge within the required window, therefore the Council does not intend to seek to vary or revoke the permission.

Will you co-operate fully with the Ombudsman and pause sign-offs pending outcome?

If a formal complaint is investigated by the Ombudsman (having first been considered by the Council at Stage 1 and Stage 2 in line with its published policy) then the Council will cooperate fully with the Ombudsman.

Will you commit that no unit can be occupied until an independent 'as-built' compliance pack is verified?

The development is subject to various sign-offs in relation to both planning and other regimes, including Building Control. As noted above the Council is proactively monitoring the development and is satisfied that at this stage it is being constructed in line with the planning permission.

Will you fund independent air and noise monitoring at the nearest homes and school for 12 months and publish the results?

The council does not plan to do this as it is not part of the planning requirements.

Will you attend an on-site walkabout on Wednesday 15th October with residents and agencies to agree mitigations?

As you know, we have met with the Resident's Association and local politicians on 2 October 2025, and continue to engage with and listen to residents and agencies to understand concerns and ensure these are raised with the developer.

Given the distress and evident harm caused to the community, will you issue a public apology and commit to training for officers, supervisors and committee members?

The Council fully recognises that some residents disagree with the decision. Planning Committee members already receive mandatory training before being able to sit on Committee, as well as refreshers or updates on key topics. Officers hold relevant planning qualifications and are members of relevant professional bodies, ensuring they are able to operate to the highest level.

Will you provide compensation to the residents affected by this development which has been built as a direct result of Wigan Council's approval.

The Council will not offer compensation.

Wigan Council, Place Directorate, Wigan Town Hall, Library Street, Wigan, WN1 1YN.
Phone: 07917 642777 E-mail: aidan.thatcher@wigan.gov.uk
www.wigan.gov.uk

You said this decision 'followed the process'. But residents live in shadow with no empathy or support from Wigan Council. Do you still stand by your belief that this decision was the correct one?

The Council does acknowledge the concerns expressed by residents and understands that planning decisions can be contentious. Planning is a policy-driven process with parameters set by national legislation, as well as national and local planning policy. The weight to be given to different factors within the planning balance is one for the decision-maker, and the Council believes that the decision was properly taken within this framework. The National Planning Policy Framework (NPPF) does require local planning authorities to approve policy complaint developments without delay.

We recognise the strength of feeling within the community and remain dedicated to supporting residents in achieving the best possible outcomes as we move forward, within the context that the application has been approved and is outside of any legal challenge period. We hope the information provided here is helpful and reassuring. Please rest assured that your feedback continues to inform our approach, and we value your ongoing engagement.

Kind regards,

Aidan Thatcher and David Proctor

Subject: Astley Business Park

Hello all,

In view of the number of questions still being asked about this, Aidan and I could do with increasing the level of detail that we know about it – evolution through pre-app, consultation on the application etc.

Would it be possible please to a set up a full morning or afternoon, for us to sit in a room and have you talk us through the background with images / files up on screen as we need?

@[redacted] can help arrange this – we'll need all those included in this email, in a room with a decent screen that you can actually see – so maybe Room C in WLCS.

Ideally if we can try for the end of the first week back after half term or the start of w/c 10th Nov, so that colleagues have time to prepare but we keep moving with it. We'll all need to prioritise this so please help[redacted] as far as possible in moving other things around.

Thanks
David

[redacted],

I'm reaching out regarding the ongoing press and public attention re PLP's scheme at Astley Business Park. If you aren't the right person to approach about this please feel free to pass it on as appropriate.

The contractor's site team have been extremely helpful which we are grateful for, but given the level of interest currently I was hoping we could also get half an hour in the diary on Teams over the next few days, for a higher-level check in on our respective approaches / responses.

If that is doable please could you liaise with my [redacted], copied in. From our side it would be myself, our Place Director Aidan Thatcher, and our media lead [redacted].

Many thanks in advance.

Regards
David

Hi Aidan

Hope you are well?

Can a meeting be organised with yourself, David Proctor, planning officer, legal, landowners or agent do discuss a number of issues around the particular site and how we can resolve things moving forward.

Thanks

James

To: Thatcher, Aidan
Subject: Astley business park

Hi Aidan
I can't find the original plans for the business park on the planning portal.

It was agreed to well before I was a Cllr and before the boundary changes.
Residents are adamant this is a lot bigger than originally planned.
Some residents weren't aware of it when they bought their houses and now can't sell their homes because of the size of it.
People are getting in touch with us and Michael Wheelers office to say they think something is untoward with how the planning has gone about and the sheer size of the frame they have erected.
Theres rumours of the conveyancers of the new builds didn't disclose the information of the building to residents who bought the new build, especially those who moved in from out of town.

Residents are also complaining about the lack of response or lack of action from the council to the developer building this huge building.
Any advice?

Kind regards,
Councillor Jess Eastoe
(She/her)
Tyldesley & Mosley Common ward

Please note that I have a full time job in addition to my councillor role, so replies maybe slower than expected.

Dear all,

Thank you for your time discussing the Chaddock Lane development last week. As discussed please see attached a copy of the presentation that we used in the meeting. This is slightly updated from the one that you may have seen a couple of weeks back, with details of the link to report evidence of any planning breaches in the last slide.

We will await the list of questions that you are collating following our meeting. As we mentioned it would be very helpful if within that list, you could confirm the specific outcome(s) that you want to see – this will help us direct our responses and advice going forward.

Many thanks
David

Subject: Astley Coverage

Hello,

Here is the written article: Wigan warehouse development 'soul-destroying' for locals - BBC News

It was also on BBC NW over the weekend. The news coverage says that the plans were 'amended' which I don't think is accurate? But whether it's worth getting into a discussion about the intricacies of this one at this point. PLP didn't comment. They took the first part of your comment out which refers to the consultation which is frustrating.

We have had another enquiry from a news agency:

Good morning, I'm a reporter at SWNS and have been speaking to residents in Tyldesley, Wigan, about concerns they have regarding the warehouse development being constructed by PLP behind the Henford Estate. For context, the BBC published this report on Friday - https://www.bbc.co.uk/news/articles/c0r7lqjg4y4o Residents have raised concerns about the scale and impact of the development. Some have said that the industrial units are larger than the original plans, with many able to see the building work from their back gardens. They have commented on the visual impact of the site, which they said is affecting their enjoyment of outdoor spaces. It has also been said that noise, dust, and the expectation of hundreds of lorries have created distress. Some have reported difficulties selling their properties and feel the development has negatively impacted their long term plans. There were also concerns about insufficient consultation prior to approval, with residents feeling surprised by the scale of the final plans. We are putting together a report based on residents' concerns and would welcome a comment from Wigan Council addressing this issue. If possible, please send this to [redacted]@swns.com. Kind regards, [redacted]

Are you happy if we send the same statement, unless there is anything additional to add:

Aidan Thatcher, director for place at Wigan Council, said: "This planning application went through our planning consultation and committee process.
"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
"We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly."
Ends

Thanks,

[redacted]

You don't often get email from [redacted]@parliament.uk. Learn why this is important

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Dear Aidan and David

Further to the Teams meeting last week with the Astley Warehouses Action Group, and the response which Michael received from David last week, there are still a couple of outstanding pieces of information which we are waiting for.

In his letter to Councillor Molyneux, Michael asked for proactive enforcement action to be taken to address the concerns being raised by residents about the site. In your presentation to the group last week, you mentioned that you and other members of your team had visited the site on several occasions over the past couple of weeks. Please can we ask for reports on the actions you have taken, the inspections you have carried out and any proactive enforcement taking place.

Michael is happy to share this information with the residents to ensure that they have up to date and accurate information about the development and operation of the site.

Kind regards

Subject: Astley Warehouses - Peel

Hi both

Is it possible to get a time line of activity since this hit the press.

The specifics I'd like to understand in a bit more detail are:

- Our enforcement activity
- Our engagement with Peel
- What have we stepped up or put in please seeking to calm the situation
- What is Peel doing to mitigate the complaints from residents
- Are we exploring any formal changes to the planning application – e.g. bigger trees, changing the hours of use etc?

The noise on this is continuing, and we are thinking that some sort of a meeting will be needed in the coming weeks – Alison and I will be making ourselves available for this.

We'd also like to do a piece of work which walks through the process, from initial and second application, through the determination processes, post decision and since the press has become involved. The aim being to consider against our Missions and 6 ways of working to understand any learning we could take from this.

Thanks

Subject: Astley warehouses - residents' questions
Attachments: Questions for Wigan Council Oct 25.docx

Hi all,

We now have the list of questions from residents (their first attempt went into my junk and I assume Aidan's as well); attached is a starter for 10 on the replies.

[redacted] would you be able to pick up the ones I've assigned to DM please; like [redacted] and Janet there are a few in here where we need input from you. Views on any of the bits I've had a go at welcome too.

If you can send contributions back to me and [redacted] please, [redacted] will collate into a master version. By the end of this week would be great please, so we can hit our timeframe of next Thursday (23rd) to get it out to them.

Many thanks
David

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi there, a video of the above meeting was shown at last meeting of the residents' action group. I am informed that Mr Thatcher and Mr Proctor were not informed that the meeting was being recorded. However, as it has now been shown in front of about 300 people and in front of TV cameras from GB News, we consider that it is now in the public domain and therefore we can report its contents. Would Wigan council like to comment on the following:

1. The accusation from members of the group that the planning officers and the committee 'fucked up'.

2. Cllr Jess Eastoe's comments which are as follows: "There are people on the plannign committee who regret the decision [to approve the application]. The application was decided after James Grundy had announced his decision not to stand in the General Election and there were new councillors on the planning committee following the May local elections in 2024. I'm so unhappy with the leadership of the planning team. They've not gone out of their way to be helpful and they completely lack empathy."

Please can you indicate if you wish to comment on the above? My deadline for this is 4pm today. Please feel free to call me if you wish to discuss.

Subject: Enquiry: Tyldesley warehousing development

Hello,

Please find enquiry below regarding the warehousing development.

I've had a chat to [redacted] who I think has spoken to you about this David, here is a first draft of a response:

Aidan Thatcher, director for place at Wigan Council, said: "Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built. "Alongisde colleagues in our planning team, I will be meeting with representatives of nearby residents *(anyone else at that mtg- cllrs/Peel?)* later this week to discuss the development and their concerns."

For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.
- Work is ongoing on the landscaping and construction of the bund.
- We have had no reports of people experiencing breathing difficulties- we would urge anyone experiencing this to get in touch with us at ***how?***
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

Thanks,

Subject: Tyldesley warehousing development

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi there, I understand that Cllr Stuart Gerrard has emailed Wigan council officers to request that a stop notice be put on the Tyldesley warehousing development as a number of families with young children are experiencing breathing difficulties.

He says: "The scale and size of the scheme are not what was presented in the original planning application, and the required bunds and screening have not been implemented in advance as stipulated."

He wants the work to be halted while the council, developer and residents get round a table to plot the best way forward.

Comment on this by 4pm today, please. If you need more time, please let me know.

Subject: Enquiry: Tyldesley warehousing development

Good afternoon,

We have received the enquiry below regarding the warehouses, a request for a 'stop notice' and complaints regarding air quality.

Here is the suggested response:
A Wigan Council spokesperson, said: "Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built.
"We will be meeting with residents later this week to discuss the development and their concerns."

For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.
- Work is ongoing on the landscaping and construction of the bund.
- We have had no reports of people experiencing breathing difficulties, but if residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times.
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

Ends

Our current deadline to respond is 4pm today- apologies for the short notice- please could you let me know if there are any issues with the above asap?

Many thanks,

Councillor Roberts,

Thank you for this. On your points:

1. The alert can be set up for any boundary that you draw, so you could draw a boundary that covered both wards if you wanted. My colleagues can show you how to do this if you want, but they can't do it for you as you have to be logged in yourself.

4. The member enquiry that you enclosed relates to a different planning application A/23/96290/MAJOR, which is for the site next to the one we have been discussing and was approved under delegated powers (so would have had fewer than 10 objections).

9. We have not had any direct feedback from the school on these concerns, and from other conversations we have had we understood the Head had no issues. If the Head does want to contact us I am happy to speak to them. Alleged damage to properties needs to be taken forward through the residents' buildings insurance, though it is worth noting that there has been no piling at this site.

I trust that helps expand on the points.

Regards
David

Councillor Roberts,

Please see the information in red below, relating to each question you asked. I hope this is of assistance.

Regards
David

1 The communication system to councillors is poor and needs to be changed as we have been let down badly in this particular case. The application was listed in November 23 but under Tyldesley and did not include Astley.
The weekly list is circulated to all members on a Monday; all members receive a borough wide list so they are able to see all applications. Councillors are able to review to the list to see if any applications of interest are in surrounding wards. The IT system that we use does not allow a site to be recorded as being in two wards – the "main" ward within which the site falls is used based on the site area. Planning Application information including the weekly list is also available online, and it is

possible to set up “alerts” based on a boundary drawn by the user. If the Councillors would like a demonstration of this please let us know and we can arrange.
We do receive the list each week and look under ASTLEY. We would have no reason to look under Tyldesley as it is not our ward. I do not understand how setting up an ALERT would help in this case as it would still not come up for ASTLEY and only alert Tyldesley.

We were not informed about the planning committee on 11 June 24 otherwise we would have put in objections and attended. Under our current processes members are not notified of an application in their ward going to Planning Committee as a matter of course. This is not something that has been asked for before, but we will investigate the possibility of doing this and whether members would find it useful. All residents who had commented were notified and the committee date was indicated on the website.

2 A site visit should have been made to make sure the committee members understood the scale of the development.
Other than for extremely large strategic developments (Wigan Galleries and Mosley Common are examples), site visits are only arranged where a motion to do so is moved, seconded and voted for in the Committee meeting. Members can decide to do this if they feel that the development is difficult to envisage from the information in the planning file and in the officer’s presentation. In this instance no site visit was proposed and the Committee proceeded on the basis that it understood the development proposed.

3 Regarding the sect 106 monies for Bedford Colliery,(£200,000), who decides this ? Was it on the original 2017 plan? Why does Astley not benefit from it instead of Bedford?
The Section 106 funding referred to relates to a specific policy requirement, for the development to achieve 10% biodiversity net gain. This is now a mandatory requirement but was not in 2017 when the previous outline application was determined. It is important to note that the recent planning approval is completely separate from the earlier outline permission – the outline permission from 2017 expired without being implemented and so a brand new full application was required. This was then assessed against the policies existing in 2024, including the biodiversity net gain requirement. The national legislation relating to biodiversity net gain is very prescriptive as to the type of works required to improve habitats, and following consultation with the Council’s Greenheart team no suitable site in Astley was identified. It is important to note that the funding secured through a Section 106 agreement for this purpose could not have been used for any other type of project.

4 Prior to the committee on 11 June 24, we were contacted by residents as there was evidence of work going on. How could this be allowed? Councillor Taylor and myself assumed the work was permitted under the 2017 application but evidently this was not the case. I will be able to provide members enquiry numbers to prove this. There are no registered enforcement cases relating to this site dating from 2024. Members Enquiry Ref. MEM021704, from 4th October 2023, related to a resident who had contacted Councillor Taylor to raise objections in relation to the warehouses. This was in advance of the Council receiving the planning application, and was triggered by the fact that the developer had undertaken their own round of consultations. Having searched our records we cannot find any other Members Enquiries that relate to this site and date from any time prior to the committee, but if Councillors have other information we can look into this further.

Please see ref 025509
Your reply is as follows:
Enquiry title: Fwd: Proposed Land development for industrial use.

Case reference: MEM025509

Carole's communication was relevant to the Murphy's empty industrial yard at the side of our property, accessed via Kennedy Road, and a recent letter received from Wigan Planning (24/1/24) in which they notify us of an application for use by a concrete pumping company who propose to construct a new Class B2 building and indicate a Gantry Crane instillation and nine portable cabins at the yard.

We are concerned where these buildings and equipment are to be sited and used as we would be very worried if is to be next to our fence and rear garden. This new proposed change of use of this industrial yard, will no doubt bring with it noise, fumes and dust pollution. We are already significantly impacted by Swaines Haulage company, in terms of diesel fumes, and significant noise from the ,movement of heavy haulage vehicles, so the type and times of daily activity would be very useful to know. If you have any specific details regarding this we would be grateful for that information.

It appears that the companies occupancy at the location has already taken place as two portable cabins have been installed against a far fence line with some equipment in the centre of the yard and a new large green building, adjacent to an already installed one, on the left of the yard masked by the trees and screening mound overlooking Withington Drive.

I would be the first to hold up my hands to being somewhat ignorant of the detailed way these planning processes take place but the tone of the letter seems to suggest that a planning application is to take place, yet to the uninformed eye it appears permission of some sort has already been granted given the appearance in the yard of the portable cabins, equipment and new building. Could this be clarified for me please.

You make mention in the earlier email of the perimeter fence being replaced to a more modern design. That I would welcome, given the one next to our garden has spikes and barbed wire on top, which is not exactly aesthetically pleasing, but the shrubs and overgrown hedges you make mention of, where exactly is that in the yard? We have a Horthorne hedge as the bottom of our garden that we trim each year and houses wild nesting birds, I hope that is not to be torn down as it is well established and supports local wildlife.

Resolution Details

Dear Cllr This is a relatively new application received at the end of January, the officer has not had the opportunity to visit the site yet. Any work that has already been carried out at the site has not been approved and has been undertaken at the applicants own risk.
Can you direct the resident to the website where they can view the plans, and confirm that they can submit any representations via the website also. I have also attached a screenshot of the proposed site layout if that helps understand the siting of new structures. I have also attached a copy of the applicants Design and Access Statement which provides a useful overview of their proposals.

Regards [redacted]

Please confirm you are satisfied with the resolution by completing the **closure confirmation form.**If we do not hear from you within 28 working days, we will assume that you are satisfied with the resolution and the enquiry will close automatically.

If you are not satisfied with the resolution, you can contact the service by completing the **unsatisfactory response form**.

Kind regards
Member Enquiries and Corporate Complaints Team

5 May we have a copy of the minutes of the 11 June 2024 committee meeting.
The minutes are available online at: Agenda for Planning Committee on Tuesday, 11th June, 2024, 2.00 pm

6 There have been suggestions of laughing taking place as a result of the MPs objection. Can someone check the video to see if there is evidence?
Planning Committee meetings are not recorded but Officers do not recall anyone laughing during the course of the meeting.

7 Page 143 of the report states that the height is not detrimental to the residential area. How can any professional person think that?

The relevant paragraph of the report acknowledges that this was a finely balanced issue, but concludes that with the conditions proposed (relating to landscaping, noise management and so on), the development would not impact on residents' amenity to an unacceptable degree. This was the officer's professional judgement, and Committee accepted the recommendation having had the opportunity to review the application and the officer's presentation.

8 It was pointed out that even if the bunds are 3m and trees are planted on them, what about the loss of light to the properties and the effect of the tree roots. Also it would take years for the trees to mask the warehousing.
The bunds and landscaping are essential to assist in screening the approved units. Our assessment is that these features are unlikely to cause significant loss of light to local residents, and certainly no more than would occur if trees had simply been planted along the site boundary, which would not have needed any permission at all. The impact on neighbouring residential properties is outlined in the *Design and Layout in relation to amenity* section of the officer's report, and it is concluded that on balance, any impact was acceptable subject to the proposed landscaping.

The approved planting scheme will ensure that the tree roots are suitably protected. It is inevitable that the approved landscaping scheme will take a period of time to fully mature, but a level of softening and screening will be achieved immediately and will be enhanced year on year. Following discussions with the Council the developer has proposed to bring forward the planting of the landscape buffer, and provided stock is available from their nursery, this should now start in November.

9 There is no mention of the noise, dust and potential health risks and danger to children in an operational site working 24/7 – The Officer's report to Members includes a dedicated section on both noise and air quality. No evidence was found that such matters would have a detrimental impact on local residents, including children.
We now have evidence that the noise is affecting the children's learning in the school and also residents are reporting excessive dust. There is also evidence of subsidence to properties which the MP is dealing with.

Subject: Follow-up: Request for Acknowledgment and Independent Review of Astley Parkway Development

Dear Alison Mackenzie Folen, OBE,

I hope you are well. I am writing again to follow up on my previous emails regarding the B8 warehouses on Astley Parkway. I completely understand that you may not have had the opportunity to respond yet, but I would be very grateful if you could at least confirm that my messages have been received.

As residents of the Astley Action Group, we continue to be deeply concerned about the way this development has been handled. In our recent Teams meeting with Aidan Thatcher, David Proctor, and several councillors, residents were told we had only 45 minutes to discuss this issue of major importance. Although the meeting slightly overran, 25 minutes were taken up by a slideshow one that we had previously requested not to be shown because we knew time would be limited. As a result, we were left with very little opportunity to ask even a fraction of the hundreds of questions gathered from residents.

The lack of meaningful communication and consultation from the council and the planning department has only deepened the community's frustration. For a development of this magnitude classified as a major planning application, it is astonishing that only 99 letters were sent out and a few A4 notices were placed on lampposts. That cannot be considered proper public engagement. Surely a development of this scale should have involved a public meeting, perhaps in a local community hall or church, where residents could ask questions and express their concerns directly.

When a planning application receives over 90 objections, this should trigger a deeper review, not simply be noted and set aside. What was the purpose of asking for residents' feedback if those objections were effectively ignored? Why was it left to volunteers like us to form an Action Group and act as the go between for the entire community? We are ordinary residents trying to represent our neighbours, yet the responsibility for engagement and transparency should rest squarely with the council.

Adding to this, we are still being asked to direct our concerns to Aidan Thatcher and David Proctor the very individuals most closely involved in the planning process. This cannot produce the independent or transparent answers that residents deserve. It feels as though we are being asked to seek accountability from those who have the most to defend.

For all these reasons, we are calling for a fully independent review of the planning process, the communication with residents, and the decision to allow warehouses of this scale to be built so close to family homes.

Please could you acknowledge receipt of this email and advise whether such an independent review can be commissioned.

With best regards,

[redacted]

Dear Allison Mackenzie Folen, OBE,

The B8 warehouses currently under construction on Astley Parkway have taken residents completely by surprise. While the land was allocated for development, few of us anticipated the scale of what is being built, leaving residents with far more questions than answers.

The rapid construction, combined with weeks of choking dust over the school summer holidays when children should have been able to play safely outdoors, this has caused significant distress. Alongside the loss of natural light, property values have been adversely affected. Despite raising our concerns, residents feel largely ignored.

We are particularly alarmed by the lack of respect shown by the builders. Dust suppression has been ineffective, and heavy machinery has routinely operated far outside the permitted hours of 9:00 a.m. to 3:30 p.m., running from 7:00 a.m. until 6:00 p.m., as our video evidence confirms. Builders have also tapped into the water supply, leaving residents without access in the mornings and preventing children from completing basic routines such as brushing their teeth before school. In some cases, verbal exchanges between builders and residents have increased stress and tension in the community.

The bunding around the warehouses does not align with the original plans. These bunds were intended to reduce noise and mitigate the visual impact on gardens and the estate. Without them, residents face unacceptable noise levels and a lasting negative effect on the character of the neighbourhood.

Safety is a further serious concern. The warehouses are constructed extremely close to residents' homes and just 30 metres from the school playground. In the event of a fire, particularly at night, the lack of adequate space for emergency services could have catastrophic

consequences. Construction noise is also negatively affecting children's learning and well-being.

This development has attracted significant public attention, including coverage on television, in newspapers, and on the radio. The Astley Residence Action Group maintains a Facebook page with over 2,000 members, with posts reaching millions online. The whole country is watching, as B8 warehouses have never before been built so close to residential homes.

We also wish to flag serious concerns about the planning process itself. Some plans submitted to councillors appear inconsistent, and Councillor Stuart Gerrard requested a stop notice due to these concerns.

As Chief Executive, you are ultimately responsible for ensuring planning processes are robust, transparent, and enforceable. In light of the issues outlined above, we respectfully request an immediate independent review of the planning process and any enforcement failures. We also ask that the planning team increase support and meaningful communication with the community, rather than relying solely on public statements about landscaping.

This Thursday, the Astley Residence Action Group will be meeting via Zoom with David Proctor to discuss these concerns further. We would greatly value your insight and support and hope to keep you informed of the discussion and any outcomes. Your leadership is crucial to ensuring that the concerns of local residents are taken seriously and acted upon.

With best regards,

Hello Alison,

I am very sorry to be taking up your time as I know you are a very busy woman, I need help and unfortunately our issues are falling on dear ears with your colleagues.

My name is [redacted] and I am apart of the Astley action group which is wanting answers for the wrong doing that has fallen on our what was once a beautiful place to live.

I live literally at the back of what is now called unit 1 of the Astley plp development, this development has driven me to the edge and I mean that literally. I have a wife and two young children and we were all set to move out of our help to buy property and move into a bigger house as we've outgrown this one. We had our hearts set on what was the house we had been waiting for and everything was going perfectly until January 31st of this year. The day of our exchange of contracts and our buyer pulled out because of what came up on her searches.

I hadn't got a clue what was going on until the estate agents told me about a 60ft tall industrial development was being built on the fields directly infront of our house. Our world crumbled within seconds. I looked back on our house searches when we moved in May of 2021 and there was nothing shown. I spoke with our solicitor and they double checked that nothing was shown on local searches.

We tried again and the same thing happened again due to this development so this year my world had fallen apart, my house has devalued and ive bought out of the 30% equity loan scheme with Wigan council. I had to remortgage to do this. I paid £63,000 back to the council for a view that I wouldnt wish on my worst enemy.

My daughters are both at Garrett Hall Primary School which has brought extra concerns as parents with all the noise and the possibility of harmful dust floating around the air we are breathing in.

Since I have been apart of the committee against this development I have found out that my house was on a list of houses that got correspondence over the development. I can happily and confidently say to you now, I never recieved a single letter. We had no idea about this.

Nobody told us we were going to lose the sun shining down on our house, nobody told us that as parents we would have decide whether or not to let our children play outside because of the dust coming off the building site and the particles of fibreglass from the insulation which is everyones gardens. But, dont worry we will plant some trees and make it all softer for you and easier on the eye as if we've been asked to nip to the shop and get some milk.

During a recent teams call that I was apart of with Mr Proctor and Mr Thatcher they admitted that the trees would take a great number of years until they reached the size thay was illustrated on there slides, the same slides that the councils planning committee voted for.

Mr Proctor and Mr Thatcher are treating us like we are the enemies. There were 99 letters sent out and 90 objections by residents. As a percentage that should have been taken into account but when asked all we got told was its not a referendum. The planning application has MAJOR in the title of the application but yet it doesnt warrant a site visit and more worryingly no LVIA or EIA was done.

You seem to be a woman of great integrity and I hope you will look into this matter as an urgent matter. We're residents of the Wigan borough! We aren't lines on a CAD drawing, this has been a massive injustice to the residents. You as a council are meant to look after us, you have a duty of care to everyone who sits inside your boundary lines. The Council's failure on this has been incredible. There's been no empathy to us. We have been treated in a way that I couldn't ever have imagined.

I understand that planning don't consider devaluation of homes when they look into things like this, surely the council should care about this. This has devalued homes across Mosely Common, Astley and into the borders of Tyldesley and dont forget we are an M28 postcode so thats Worsley too.

I thank you for taking time to read my email, I have copied in our MP Michael Wheeler.

I look forward to hearing from you.

Kindest regards,

Dear Mrs McKenzie-Dolan.

As a Wigan resident and a Council Tax payer for over 40 years during which time my family have enjoyed our time in Astley with my children educated at local schools and felt supported by our local Council.
My feelings now towards my local Council including its senior Officers and even more so its Elected Councillors are my family and our local community has been totally failed by Wigan Council.
As someone who has represented businesses in another Greater Manchester Authority and worked with Officers and Councillors for many years I feel that something must be seriously wrong regarding Wigan Councils policies on working with and protecting its residents regarding all aspects of its planning applications.

Other Councils up and down the country will look at the bad press Wigan Council has received over this issue and wonder why the Planning Application was ever allowed.

You will know a local group has been formed with a large group of very angry residents which will bring further bad press on our Local Council.

I sincerely hope you will give this matter a full and transparent review.

Regards

Good afternoon Alison,

Apologies for the delay in my response, I was working all weekend.

I have attached images of the email trail that I asked with Matthew Montgomery Solicitors after our house fell through [redacted].

My address is [redacted] Worsley, M28 1[redacted]

The local MP Michael Wheeler is copied into this email and ive already spoken to him on a number of occasions over this.

As you know I am apart of the Astley Action Group. I really hope this can come good because you seem like a woman of integrity and If you put yourself in our shoes, I think you would be doing the same as us.

Kindest regards

[redacted]

Since I have been apart of the committee against this development I have found out that my house was on a list of houses that got correspondence over the development. I can happily and confidently say to you now, I never recieved a single letter. We had no idea about this.

Nobody told us we were going to lose the sun shining down on our house, nobody told us that as parents we would have decide whether or not to let our children play outside because of the dust coming off the building site and the particles of fibreglass from the insulation which is everyones gardens. But, dont worry we will plant some trees and make it all softer for you and easier on the eye as if we've been asked to nip to the shop and get some milk.

During a recent teams call that I was apart of with Mr Proctor and Mr Thatcher they admitted that the trees would take a great number of years until they reached the size thay was illustrated on there slides, the same slides that the councils planning committee voted for.

Mr Proctor and Mr Thatcher are treating us like we are the enemies. There were 99 letters sent out and 90 objections by residents. As a percentage that should have been taken into account but when asked all we got told was its not a referendum. The planning application has MAJOR in the title of the application but yet it doesnt warrant a site visit and more worryingly no LVIA or EIA was done.

You seem to be a woman of great integrity and I hope you will look into this matter as an urgent matter. We're residents of the Wigan borough! We aren't lines on a CAD drawing, this has been a massive injustice to the residents. You as a council are meant to look after us, you have a duty of care to everyone who sits inside your boundary lines. The Council’s failure on this has been

incredible. There's been no empathy to us. We have been treated in a way that I couldn't ever have imagined.

I understand that planning don't consider devaluation of homes when they look into things like this, surely the council should care about this. This has devalued homes across Mosely Common, Astley and into the borders of Tyldesley and dont forget we are an M28 postcode so thats Worsley too.

I thank you for taking time to read my email, I have copied in our MP Michael Wheeler.

I look forward to hearing from you.

Kindest regards,

Hi both

Further to my email below on behalf of Michael, please can I add an extra question following enquiries from residents at a community meeting this week:

- There is some concern that Whistl, which has taken on a lease for one of the buildings, will have on site fuel storage to service it's vehicles. Residents are concerned about the safety impacts of this, if true, on neighbouring properties. Please can you let me know if you are aware if there are any plans for this. Could you also please comment on whether there are any additional planning requirements for storing fuel on a site, or if the planning already granted would allow this.

Many thanks

Dear David and Aidan

Thank you for coming back with information on the enforcement visits. Michael has asked if you can provide further clarification on the following:

- More detailed information on your findings in the most recent enforcement visits and particularly the methods used to assess compliance with the Construction Environmental Management Plan
- Precise information on where the bunding work is complete, including confirmation of the height of the bund which is in place
- Confirmation of where the bunding is not complete, and an agreed date of when it will be completed by

- Precise information on the planting - what kind of planting will take place e.g. will it be a mixture of saplings and mature trees, a mixture of evergreen trees and other kinds of trees, and what height will the trees be
- Following reports of children developing asthma since the site began construction, please can you confirm whether air quality meters can be installed to measure the impact of the build on air quality in the area

Michael would find it very useful to walk the perimeter of the site with you and discuss the issues. Please can you provide some dates of when this can be arranged. Thursdays or Fridays are better for Michael due to the requirement for him to be in Westminster earlier in the week.

Kind regards

Dear [redacted]

Visits and actions have been undertaken as follows:

- 15/05/2025 – To check compliance with Construction Environmental Management Plan (CEMP) in relation to complaints about dust during period of very dry weather
- 29/05/2025 - Follow up visit to check compliance with CEMP again to ensure the site manager was continuing to adhere to its requirements
- 25/07/2025 – To check height of the frames of the larger units (Units 1 and 2). Laser equipment used to confirm max building height of 18.3m in accordance with planning permission.
- 11/09/2025 – walked around all of site, including site boundaries to check landscaping bund which was largely complete at this point. Checked general siting of the buildings, checked the spread of materials/dust on site, checked complaints log held on site by site manager (CEMP requirement). Discussed the planting of the bund and agreed a start on this in November '25.
- 30/09/2025 (with Environmental Protection air quality specialist present) – to check compliance with the CEMP and get input on whether there were any other measures that the contractor should have in place. Content that they were complying with their CEMP and had extra mitigation measures in place that weren't required by the CEMP. No areas witnessed on site which could lead to the wider dispersal of materials.

I trust this assists. We have received a Freedom of Information request on this topic as well and will be responding with the same information.

Regards

David

Dear Aidan and David
Further to the Teams meeting last week with the Astley Warehouses Action Group, and the response which Michael received from David last week, there are still a couple of outstanding pieces of information which we are waiting for.
In his letter to Councillor Molyneux, Michael asked for proactive enforcement action to be taken to address the concerns being raised by residents about the site. In your presentation to the group last week, you mentioned that you and other members of your team had visited the site on several occasions over the past couple of weeks. Please can we ask for reports on the actions you have taken, the inspections you have carried out and any proactive enforcement taking place.
Michael is happy to share this information with the residents to ensure that they have up to date and accurate information about the development and operation of the site.
Kind regards

Hi all,

See the latest below from the residents' group at Astley. Can we pick up with the contractor / site manager please about measures to control dust / wind-borne material leaving the site? We want to be able to provide assurance that the CEMP is being complied with.

Our meeting is Thursday so before that please, let me know if any issues.

Thanks
David

Good morning Christine.
I just wanted to keep you informed of trends developing via the residents complaints of late.
More and more complaints of rat infestation.
Several parents have notified us of breathing problems developing in children. Parent speaking to [redacted] (MEN) re her daughter's recently diagnosed asthma.
Lagging from the site (dangerous if inhaled or touched) being blown onto pathways and into peoples gardens. (TANRO informed)
Thanks again for all your support. We have a Teams meeting with Proctor / Thatcher scheduled for October 2nd.

Subject: FW: Astley warehouses

Hi both,

Please see below the media enquiry we've received from Granada Reports re: the Astley warehouse. We've encouraged them to contact TanRo, but have also drafted the below from a council perspective. Would you be happy with this, or do you have any suggested amends?

A Wigan Council spokesperson said: "Local authority officers - including environmental protection air quality specialists - have been on-site and are in close communication with the developer and their construction partners.
"This is to ensure that all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, both for the development itself and while it is being built.
"We would encourage any residents who are concerned about any aspects of how the site is being delivered to report via our website."

Further information:

- *If residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times, and we will investigate where appropriate.*
- *The construction company has responsibilities to monitor conditions on site and will therefore be better placed to comment on day-to-day issues.*

Many thanks,

Hello,
I work for Granada Reports, the ITV regional news programme in the North West and we're returning to the subject of the Asley Warehouses tomorrow,
We have spoken to a number of residents who tell us they are now suffering with breathing difficulties and asthma since the building work began.
You may be aware that this matter is also being investigated by the Environment Agency.
Can you confirm please if the council is aware of these issues? Do you have anyone available for interview? We'll be back in the area tomorrow and perhaps an officer or councillor would be willing to tour the estate with my reporter and camera - that would be great if possible.
Let me know your thoughts,

Subject: FW: BBC Radio 4 You & Yours - Please can you confirm this email has been received

Hello,

Please see below for You and Yours on Radio 4- there is quite a long list of questions we've been asked to address.

James and David spoke yesterday- and agreed that we would put David up for interview- if you're still happy with that David? They are planning to air Wednesday, so please can you let me know a couple of times Monday/Tuesday that would be good for you?

Ahead of that though, I think there are quite a few of the questions we can push back on now which will hopefully help to clarify some issues ahead of the interview.

One thing I'm a bit confused on- he refers to a 2015 application, is that an error on his part?

Start of a suggested response, based on what we've said before below but theere are a few that are probably new questions to us- if there is anything else we can start to respond to today, or anything that came out of yesterday's meeting that we can include?

Happy to hop on a call if that would be easier.

Here is some background context for this site:

- *This land has been allocated as employment land since 2006.*
- *The outline planning application for this site approved the principle of industrial development on this site, which is an extension of Astley Business Park, in 2017.*
- *The outline planning permission did not set final size or layout of the buildings, but we appreciate this planning process may be the cause of some of the confusion.*
- *The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*
- *Ahead of this letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.*
- *We have met with representatives of the residents living nearby, alongside their local councillors and MP, to discuss the development, the point we are now at, and potential options moving forwards.*

ends

Thanks,

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi,
Hope this email finds you well.
I'm one of the team that works on BBC Radio 4's You & Yours, a consumer and lifestyle programme. We are working on an item around large warehouses, or mega sheds as they are also known, and plan on that being on air Wednesday 8th of October. The item will feature audio with residents from and around the Henford Estate in Tyldesley, discussing their concerns and issues around the current PLP warehouse development. This will be part of a larger item around warehouse development in the UK.

We would like to invite a spokesperson from Wigan Council on to the programme to discuss the development with us, as well as discussing the concerns of residents.
If there isn't a spokesperson available, could we please get a statement addressing the concerns of residents, as well as addressing the following areas – our deadline is 5pm Tuesday 7th October 2025:

1. When did PLP first submit plans to develop the site and how have they been changed and altered to arrive at the plans that were granted permission by Wigan that are in current development?
2. Overall, how many plans have PLP submitted for permission on the site, been granted by Wigan Council, but lapsed?
3. How were residents informed about all PLP planning applications (regardless of outcome) and methods for them to engage?
4. Was any additional outreach to residents given after the 2015 granted planning permission lapsed, and new plans were submitted?
5. How many complaints were issued against the granted 2015 PLP plans?
6. How many complaints did the current PLP development have?
7. In the process of Wigan Council granting permission for the current plans in development what consideration and process was given to the impact on residents during and after development – mental and physical health, property damage and value, and general disruption to their lives, the environmental impact, impact on education and health of pupils at Garrett Hall Primary School, and loss, and local infrastructure?
8. The residents group Astley Warehouse Action are claiming that the submitted plans by PLP do not show a true representation of the housing in that area – how does Wigan Council respond?
9. Residents have claimed their properties have been damaged by these works - how does Wigan Council respond?

10. Residents are claiming that this has drastically reduced the value of their properties and making them difficult to sell - how does Wigan Council respond?
11. Residents claim that over 100 people complained about the PLP development by Wigan Council have only reported 70 - how does Wigan Council respond?
12. How are Wigan Council currently helping the residents impacted by the PLP development?

I am happy to discuss this over the phone if you wish.

Many thanks,

[redacted]

9. Residents have claimed their properties have been damaged by these works - how does Wigan Council respond?
10. Residents are claiming that this has drastically reduced the value of their properties and making them difficult to sell - how does Wigan Council respond?
11. Residents claim that over 100 people complained about the PLP development by Wigan Council have only reported 70 - how does Wigan Council respond?
12. How are Wigan Council currently helping the residents impacted by the PLP development?

I am happy to discuss this over the phone if you wish.

Many thanks,

[redacted]

>><<

1. *When did PLP first submit plans to develop the site and how have they been changed and altered to arrive at the plans that were granted permission by Wigan that are in current development?*
   This land has been allocated as employment land since 2006; with warehousing always envisioned as an option for this site.

   An outline planning application for this site, which did not set final size or layout of the buildings, was submitted by Peel (the then owner of the site) in 2015, for a mix of housing and commercial uses including warehousing. This was approved in 2017.

   This outline planning permission lapsed in relation to the employment land. The reserved matters planning application in relation to the housing land was brought forward, approved and these homes have now been built and occupied.

   A full planning application for the employment land went to committee in June 2024, brought forward by PLP, for warehousing as included in the original land allocation and outline planning permission.

   This full application set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

I

2. *Overall, how many plans have PLP submitted for permission on the site, been granted by Wigan Council, but lapsed?*
   This application is the only one submitted by PLP. There have been previous applications for this site back to the 2000s.

3. *How were residents informed about all PLP planning applications (regardless of outcome) and methods for them to engage?*
   All planning applications are publicised through the same methods, in line with policy and national legislation, including site notices, a press notice and letters to neighbouring properties.
   In relation to the PLP application, letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.

4. *Was any additional outreach to residents given after the 2015 granted planning permission lapsed, and new plans were submitted?*
   Answered in Q3

5. *How many complaints were issued against the granted 2015 PLP plans?*
   This application received a petition with 26 signatures and 6 letters in opposition.

6. *How many complaints did the current PLP development have?*

Answered in Q3

7. *In the process of Wigan Council granting permission for the current plans in development what consideration and process was given to the impact on residents during and after development – mental and physical health, property damage and value, and general disruption to their lives, the environmental impact, impact on education and health of pupils at Garrett Hall Primary School, and loss, and local infrastructure?*
   The officer's report to Planning Committee sets out the full assessment that was undertaken, having regard to the relevant material planning considerations.

8. *The residents group Astley Warehouse Action are claiming that the submitted plans by PLP do not show a true representation of the housing in that area – how does Wigan Council respond?*
   Some of the plans submitted used a base map that did not include all the houses now present adjacent to the site. However, the houses were shown on other plans, including the cross-sections used to assess the relationship between the buildings and the houses and the effectiveness of the landscape screening. As such, we have no concerns that officers or members of the Planning Committee were not aware of these homes.

9. *Residents have claimed their properties have been damaged by these works - how does Wigan Council respond?*
   Any questions around damage caused by the building works are to be discussed by the construction company and the residents/their insurance. It wouldn't be appropriate for the Council to be involved in those conversations.

10. *Residents are claiming that this has drastically reduced the value of their properties and making them difficult to sell - how does Wigan Council respond?*
    The Council is only able to take 'material planning considerations' into account when assessing planning applications, in line with national legislation.

11. *Residents claim that over 100 people complained about the PLP development by Wigan Council have only reported 70 - how does Wigan Council respond?*
    Answered in Q3.

12. *How are Wigan Council currently helping the residents impacted by the PLP development?*
    We are meeting with representatives of the residents living nearby, alongside their local councillors and MP, to discuss the development, the point we are now at, and potential options moving forwards.

Hi Alison
Please could you explain this as I don't recall hearing anything from you despite saying via ward councillors

We have provided residents with details of how to report any breaches, and my team have also (via ward Councillors) offered a discussion to the head of Garrett Hall Primary School – this offer has not been taken up to date but remains open.
Best wishes

Dear Mr Proctor.
I am writing to you in relation to a recent invitation I received to attend a Teams meeting on either 22nd or 24th September. Unfortunately both dates are not suitable for some members of the Steering Committee and Michael Wheeler MP, who we would like to attend but is on holiday next week. I have contacted his secretary and requested dates for w/b 29th September. Please note that several members of the Residents Steering Group would like to attend the meeting.
With Regards

Subject: Fw: Contact to the PR team from the Web

Good afternoon,

We have had the below query about Astley warehouses from Good Morning Britain. They haven't asked anything more than what we have previously said, so this is our suggested response:

Here is the suggested response:

A Wigan Council spokesperson said: "This application went through our planning consultation and committee process, which included letters being sent to neighbouring properties.

"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.

"We will continue to monitor the site throughout construction, ensuring this development brings new jobs and investment to the area is delivered properly."

For context and timeline:

- *Any questions around damage caused by the building works are to be discussed by the construction company and the residents/their insurance. It wouldn't be appropriate for the Council to be involved in those conversations.*
- *The Council is only able to take 'material planning considerations' into account when assessing planning applications, in line with national legislation. Potential changes to house prices is not included.*
- *This land was allocated as employment land in 2006, in the Council's 'Unitary Development Plan, and is an extension of Astley Business Park with this development expected to create around 500 on-site jobs, and another estimated 460 across Greater Manchester.*
- *The first 'outline planning application' went to Planning Committee in 2017. Permission was granted to the principle of industrial development on this site, but this did not set the final size or layout of the buildings. We appreciate that this part of the planning process may have caused some misunderstanding of what had been permitted on the site at this point in time.*
- *The full planning application went to Committee in June 2024, at which point the size, footprint and height of the units was set and agreed. There has been no fundamental change to those since permission was granted. Agenda for Planning Committee on Tuesday, 11th June, 2024, 2.00 pm*
- *In line with policy and national legislation, ahead of this Planning Committee meeting, letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of around 70 addresses in the area. All objections raised were fully considered during the decision-making process.*

From: [redacted]
Sent: 03 September 2025 10:40
To: Thatcher, Aidan; Proctor, David; [redacted]
Subject: FW: Interview request - ITV Granada

Hello both,

Please see interview request below.

I've spoken to [redacted] and we'd advise against the interview at this point. We can send the statement we've been using to date but perhaps expand it out:

Aidan Thatcher, director for place at Wigan Council, said: "This planning application went through our planning consultation and committee process.
"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
"We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly."
Ends

For context:

- The original outline planning application for this site was approved in 2017. This application was more general and did not set final size or layout of the buildings.
- The full planning application went to committee in June 2024, which set out of the size, footprint and height of the units and there has been no fundamental change to those since permission was granted. Letters were sent to 99 neighbouring properties, and the application received approximately 70 representations.

Thanks,

Hi there,

Thanks for your time on the phone earlier.

We're filming with residents at the Henford Estate today at 11am.

We'd be keen to speak to someone from the Council as well, or take a statement to clarify your position on the development by PLP.

Thanks

Hi both,

This is startling reading.

A re-consultation should have taken place due to the number of material changes that happened to the planning documents between the public consultation and the committee hearing.

Here's a few key highlight changes:

- The building was raised by 2 metres!
- Bunds reduced from 3-4 metres to 2-0 metres.
- Tree sizes reduced.

I'll attach the rest.

This is really getting out of hand in terms of things that are being found. I would really recommend that this needs to be paused while these issues are ironed out.

Remember the public objections finished in Dec 2023. All the changes mentioned here happened after that with no re-consultation.

Specific changes

Element	November 2023 issue	May 2024 amended issue	Why it matters
Building heights	Previously shown ~16.5 m ridge	Revised to **18.3 m ridge / ~15 m eaves**	1.8–2 m taller → shading, and aco LVIA and noise m
Unit footprints & spacing	More evenly spaced; smaller footprints	Combined massing into **wider, longer sheds** (Unit 1–4 merged footprints visible on GA)	Alters traffic circ and bund interfa
Roof profiles	Flat parapet	Revised to **stepped twin-ridge** with roof plant	Increases bulk ar
Facade treatment	Two-tone metal cladding	Revised to **single light-grey** finish	Changes reflecti next to housing.
Attenuation ponds	Two small ponds shown	**Larger, repositioned** ponds near estate boundary	Potential odour / unconsulted.
Bund and tree screen	Indicative green mound 3–4 m	**Flattened bund line** in sections; labelled	Removes promis

Files affected

`Landscape Concept Rev P04–P05, Landscape Cross Sections, Soft Landscape Maintenance & Management Plan (10`

Specific changes

- **Bund height**: previously 3 – 4 m; cross-sections now show **~2 m average**.
- **Tree specification**: switched from "semi-mature (4.5 – 6 m)" to "feathered / light-standard (2 – 2.5 m)".
- **Planting density**: reduced from double to single staggered row.
- **Species mix**: moved from native oaks/birch/hazel to faster-growing but short-lived alder / willow

Files affected

`784–B034505 PLP Astley Business Park Noise 13 May 24`
(supersedes the 25 Sep 23 version).

Specific changes

- **Plant / HGV data updated** to include night-time loading.
- **Modelling boundary** extended to residential plots previously "screened".

Alison, can you please share when this is?

Cladding and toxic materials (very easily picked up by children) landed in my garden over on the redrow estate. This meant it has had to travel past the local primary school. It's a matter of time until the council has blood on its hands. Do the right thing please!

Hi Alison

I'm emailing to request your assistance in reviewing the processes and decisions made in granting planning permission for the above development.

Residents lives have been ruined here, as a result of decisions made by the council. It is a matter of time before children at the school, a stones throw away, are fatally injured as a result of the close proximity. Cladding flying over the playground in high winds, wagons and lorrys on routes that were not intended for such traffic.

I urge you to meet with the residents and review this decision ASAP. The locals want an inquest and will be contacting panorama to investigate this issue further.

I look forward to hearing from you around how we can make this stop.

Kind regards

Dear Councillor Roberts.
I have been copied into David Proctor's email where he states he's looking at coordinating diaries presumably to arrange a meeting with the residents.
Can you please inform him that after contacting the steering group , which is representative of all affected residents, that we have no intention of attending a meeting at the council offices if that is his intention.
The residents will only be satisfied if he walks around the affected areas and witnesses first hand the full impact and reality on people's houses that this decision has caused. After this we are more than willing to sit and meet at a suitable venue. Garrett Hall School or Holly Family School has been suggested.
Withington regards
[redacted]

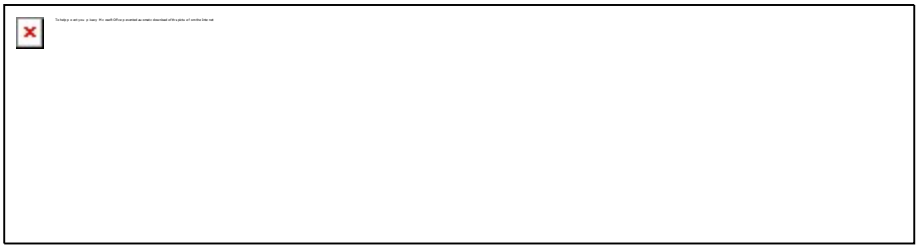
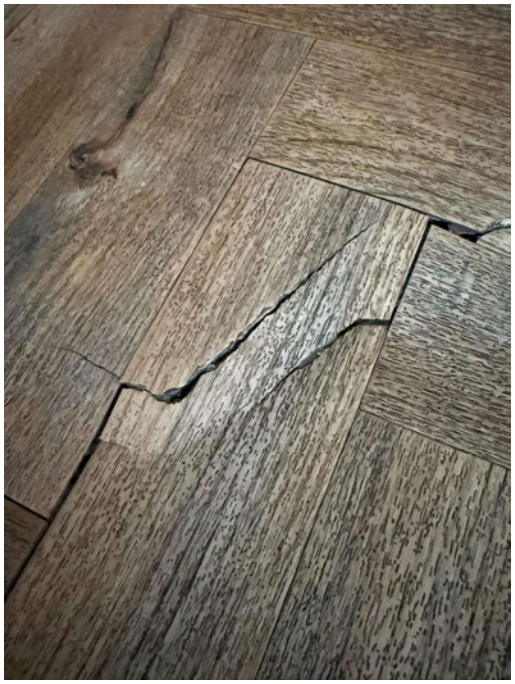
Subject: PLP industrial site

Hi Aidan

I am really concerned about the scale of the industrial site on Astley Business park. I'm concerned the trees won't have the effect you're looking for due to how large and tall the buildings are, and how close they are to some of the houses.
What's most concerning is the damage that's been done to people's houses. When we had the first heatwave the dust was across Tyldesley and Astley.
I also had to ask for vibration equipment for the houses near by - and the council so called went to the site about the two issues.
Amongst the press releases you'll see a few houses have big cracks on their house and flooring has cracked.



What can be done about this?
Are PLP and/or the council going to fix the damaged to houses or offer compensation?



I understand the route of insurances, but surely if this build was an appropriate distance away this wouldn't happen in the first place.
I don't think residents are taken seriously enough within this planning approval - and I'm disappointed in the lack of consultation considering how close it is.
I gather the planning permission on acknowledged its connections to the rest of the business park on Chaddock Lane and failed to make appropriate measures or care about the houses on the other side, just a few feet away.

What is going to be done to mitigate the issues?

Kind regards,
Councillor Jess Eastoe
(She/her)
Tyldesley & Mosley Common ward

Please note that I have a full time job in addition to my councillor role, so replies maybe slower than expected.

Aidan and David,

Last week (7th October) we sent over the below email with a list of questions, a proposal to meet at the construction site on Wednesday this week and a request that you let us know that you have received the email.

We haven't had a response as yet, so we're checking that the email has been received and is being looked at?

Thanks,
Astley Warehouse Action Group

On 7 Oct 2025, at 21:22, Astley Action Group <astleyactiongroup@gmail.com> wrote:

Aidan and David,

Thanks for the meeting with us on Thursday.

As requested, please find attached outstanding questions from the Astley Action Group.

There's a request, amongst the list of questions, for you both to meet a selected group at the development on Wednesday 15th October.

Please acknowledge receipt of this email and let us know a timeframe in which you will seek to answer the questions.

Thanks,
Astley Action Group

Questions for Wigan Council

• You told residents that you 'followed the process'. Do you accept that following process is not the same as following good practice?
• What lessons have you taken from how this application has affected trust in Wigan Council?
• Can you explain how you have come to the conclusion that you carried out an extensive local community consultation?
• Can you give a concise overview of what has happened on this application, what's outstanding, and what the next 12 months look like, including enforcement and monitoring?

• Who quality-assured and signed off the officer report before it went to committee? Who reviewed it and when. Please provide evidence of what was discussed during those reviews.
• Do you accept that the officer's report under-represented the scale and impact on homes and the school?
• Councillors depend on the officer's report, but public objections made up just 3.5% of that report. The evidence and real-life impact (94 objections on average 500 words long) were sterilised into a few bullet points. Does Wigan Council accept that this distorted the balance of information before the vote or are councillors expected to read 55,000 words of objection on the portal before the hearing in addition to the officers report?
• Were the planning drawings submitted before or after the planning officer attended the site. If the drawings were submitted before the site visit did the planning officer not notice the drawings were incorrect as houses were missing? If the drawings were submitted after the site visit did the planning officer make reference to this with the applicant to rectify the issue?
• Do you accept that housing being missing on planning maps within metres of the warehouse is a critical error?
• Was a video of the site shown to the committee. Did this indicate the height of the structures?

• What timeframe did the committee receive to review the application? How many other applications had to be reviewed in that time?
• You appear to have the view that the development is 'on-balance acceptable'. Why was the clear harm to the community not given enough consideration and what threshold would not have been acceptable?
• Research shows that warehouses of the scale you have approved create far fewer jobs per square metre (often one job per 130–150 m²), compared with smaller industrial units that generate up to five times more employment density. Was this considered when approving the 18 metre structure?
• What volume are the warehouses compared to the volume of those proposed in 2017.

• What negotiations took place between the planning officer and PLP to reduce the height, footprint or orientation of buildings prior to submitting plans to the public to ease the impact on the community? If none, why not?
• You stated there were 'iterations of plans' between public planning submission and the council decision meeting. What changes have improved the outcome for residents?

• Why was the industrial element of the 2017 outline plan allowed to lapse?
• Once the 2017 residential element was dispatched, why was the new full planning application of 2023 so unsympathetic and incongruous to the houses? What changed?
• Is Wigan Council aware of any motivation to let the industrial unit plans lapse to ensure the new surrounding houses were purchased at a high market value?

• Why was no Environmental Impact Assessment or LVIA required on a development within a few metres of so many homes and a school? Who made that decision, and how did you come to that decision?
• Why were drawings accepted that omitted existing homes? Was that error disclosed to the committee before the vote given it impacted on the reality of the plans? (Many public objections raised this issue and even those comments were misrepresented in the officer's report).
• Do you feel enough was done to educate the committee on the impact of the warehouses prior to their vote?

• Please provide the notification list, addresses, distances, and dates sent of the planning notifications. Was the school formally consulted?
• You said you followed legislation, do you agree that good practice required in-person engagement with affected residents?
• What provisions were made to ensure that blind, disabled, and elderly residents were properly informed about the development. Given the limited public notifications, it's important to know whether the council made any effort to make the consultation accessible to everyone in our community.
• If you say 99 letters were sent, and 94 objections submitted (a 95% rate of letters v objections), many citing clear errors in plans and seek further information - why did the planning officer who collated them not pick up on the errors / key issues / impact?
• Why were 70 objections reported when there were 94 objections + 2 neutral.
• Has Wigan Council communicated with or offered guidance to Garrett Hall School's employees in any way, relating to the Warehouse's development plans or external communications.

• Please provide details and dates of visits made to the site by the planning officer, any other council officials, prior to the planning permission being proposed.
• What criteria were used for the councillors to not hold a site visit? Did any member propose one? Given the knowledge and potential impact in the area, why did the planning officer or those signing it off not advice the Chair of the committee to recommend a site visit?
• Given councillors could not rely on first-hand context, is it possible they lacked a full understanding of scale and proximity?
• 2 Independent councillors objected, the remaining Labour councillors approved it. Were the Labour Councillors on the committee advised or whipped in any way to approve this development?

• Approved planning documents show 3-4m bunds, but residents report large gaps in bunds and a significant height difference in many places. Please provide details of the current plan with bunds. When will you complete an as-built survey and certify compliance?

• Given the clear impact that now exists within the community, what will Wigan Council do to compromise and find a solution to win back the trust of the community they represent?
• Current landscaping plans show that many of the trees planted will be much smaller when planted. What will be in place to ensure the community is protected from the visual, light, sound and pollutants in the 20-50 years it takes for those trees to grow?
• Many of the trees detailed are deciduous species, meaning they will have no leaves for 6 months of the year. Has the impact of this been considered?
• Does the proposed planting plan show rates of growth as trees planted on bunds take longer to get established because of water running off making growing conditions drier and therefore slowing growth? How long would it take for the trees to reach say ten metres in height?
• Does the landscaping plan require replanting of any failed trees and at what height?

• What enforcement has taken place by Wigan Council since building has commenced and when?
• What action has been / continues to be taken on dust control and water supply? Who is monitoring and how often?
• You said officers visited 'multiple times'. Please provide that site-visit log with dates and findings.

• What is the status of fire strategy and hydrant provision? Will occupation be prevented until GMFRS confirm compliance?
• The Fire Site Boundary Plans was drawn in 2021, but consultation with the Fire Service didn't start until 8th September 2025. Nearly four years later, by which time the warehouse structures were already built. GMFRS only have 15 working days to respond. These warehouses are dangerously close to our homes and the junior school, if a fire like the Cannock warehouse fire in May 2024 happened here, the consequences could be catastrophic. Can you explain this late consultation, do you accept responsibility for this late consultation, and do you recognise the danger it poses if a fire was to break out?
• Has United Utilities confirmed firefighting flows won't affect residential supply? Please publish the correspondence.

• You have permitted 24/7 operations and lighting. What reassurances will you give to the community that this will not impact their quality of life given the details provided about bunding and landscaping above?
• Will you require PLP to route HGVs via the A580 only and publish a routing plan?
• Will you implement parking permits on the residential streets surrounding the Business Park to prevent parking issues?

• How much weight did officers give to land-value or 'council revenue' versus community impact?
• Why was biodiversity offset money spent away from Astley? Will you review that allocation?
• How Bedford Colliery was chosen as the recipient?

• Given Bedford Colliery closed in the 1960's and the residents near to Green Lane couldn't tell us where Bedford Colliery was, please detail the specific area that will benefit of this biodiversity funding.

• Will you commission an independent review of this application's handling and publish it?
• If material errors are found, will you add conditions or pursue revocation if necessary?
• Will you co-operate fully with the Ombudsman and pause sign-offs pending outcome?

• Will you commit that no unit can be occupied until an independent 'as-built' compliance pack is verified?
• Will you fund independent air and noise monitoring at the nearest homes and school for 12 months and publish the results?
• Will you attend an on-site walkabout on Wednesday 15th October with residents and agencies to agree mitigations?
• Given the distress and evident harm caused to the community, will you issue a public apology and commit to training for officers, supervisors and committee members?
• Will you provide compensation to the residents affected by this development which has been built as a direct result of Wigan Council's approval.

• You said this decision 'followed the process'. But residents live in shadow with no empathy or support from Wigan Council. Do you still stand by your belief that this decision was the correct one?

Subject: Request for briefing for the Leader's meeting on Friday

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi Jo

Could the following be addressed at the meeting on Friday regarding The Bell in Pemberton please:

1. Are they are details on what jobs the development will bring to the area? In particular people were sceptical about if they would really be well paid or good quality jobs, some have dismissed them as just "warehouse jobs" or said they wouldn't be sustainable
2. Has there been any modelling on the impact on congestion/air pollution?

3. People have said the extra industrial floorspace is not needed due to the currently empty/unused industrial space in places like martland mill, do the council have any details on how much floorspace on existing industrial estates is currently not being used?

Thanks,

[redacted]

Your reference: COR006372
Please ask for: Complaints Team
Direct line: [redacted]

By email only to:
[redacted]@yahoo.co.uk

Date: 18th August 2025

Dear [redacted]

I refer to your complaint relating to the development of warehousing units at Astley Park Industrial Estate, under planning permission ref. A/23/96226/MAJOR. This is being dealt with as a formal Stage 1 complaint.

I understand the basis of your complaint to be as detailed below.

1. You have received three previous responses from the Council but none of them have provided answers to your questions. You have contacted your Ward Member (Councillor Roberts) but she has not received a response either.
2. Why did the building of the units commence after all the houses were built and sold if planning permission has always been there?
3. Planning was adapted after a lot of houses were built, why was this allowed and the surrounding residential area not taken into consideration?
4. Why were units of this size allowed to be built in a residential area, original plans were for much smaller units and offices
5. How can planning be granted and not take into consideration the financial impact of hundreds of properties surrounding them? It's a fact that these units have already devalued the surrounding houses significantly.
6. What trees and shrubs are going to be planted and who is responsible for the upkeep of them?
7. Who is buying/renting the units?
8. What will be the working hrs of the units, 24hrs? Large noisy vehicles, floodlit carpark?

9. Why were only 99 letters issued when this site affects hundreds of houses?
10. There were 70 objections why was this allowed to go ahead on this scale?
11. You need to take into account the wellbeing and welfare of the local residents as these units are causing a lot of stress and anxiety. Are you monitoring the site?
12. The bund running around the units should be 3 metres in height ours is only 2 metres.
13. We have a security risk as there is a footpath right at the back of our house, what are you going to do about that?
14. The site is sometimes running from 7.30 and last night didn't stop until after 6.30.
15. The bunds will not provide significant screening to hide these monstrosities, the scale and proportion is not acceptable. The landscaping projection is 15yrs! What do we do in the meantime?
16. My priority is the well-being of my family and you are putting it at risk. [redacted] The amount of dust that was flying around was clearly visible. We were unable to open windows or hang washing out as the garden was covered in thick orange dust. This is not acceptable.

I will respond to each of the numbered questions in turn.

1. The case officer has endeavoured to provide responses to your queries and has provided two responses to enquiries from Councillor Roberts. As you are not satisfied with the information provided, your enquiry is now being treated as a formal complaint at Stage 1 of the Council's procedure.

2. An outline planning permission was granted in 2015 for mixed use of the wider site (residential and industrial) (A/15/81365/OUTMAJ) – two parcels of land received detailed (reserved matters) approval for housing, but detailed approval was never sought for the industrial element of the approved outline scheme. The approved Outline scheme did not include any restrictions on the timing of how each element came forward, and the land designation of the site has never changed. I can further confirm that the Council's assessment of the proposal was carried out in full cognisance of the proximity of housing around the site.

3. The nature of the surrounding area was taken into account, as clearly outlined in the Officer's report which was presented to the Planning Committee in June 2024. The approved application sought full planning permission for the development, this was not an application which was

bound to follow the details shown in the 2015 Outline permission and as such the planning proposal was not adapted.

4. Planning permission A/15/81365/OUTMAJ was in outline, meaning no details were approved of the size or siting of the employment buildings. The submitted Design and Access Statement referred to the potential for the employment units to be smaller in scale to suit local businesses, and this was shown on an indicative Masterplan. However, the only document formally approved was the Parameters Plan, which identified the general location of employment and residential development, but didn't include details of the size of the employment buildings. For clarity, as stated above, the more recent application was a full application so would not have been bound by the parameters of the previous outline approval in any case.

   The approved units are located in a Primary Employment Area which is adjacent to a residential area, and they were deemed to be acceptable for the reasons outlined in the Officer's report presented to Members in June 2024. This included detailed consideration of the location of the units in respect of adjacent boundaries and the mitigation proposed in the intervening areas, i.e. the bund and associated landscaping.

5. The financial effect on local properties as a result of an approved development is not a material planning consideration and cannot be taken into account when making a balanced planning decision. This is because planning decisions must be based on factors that prioritise the public interest rather than private financial concerns. In this regard, a planning decision must consider such matters as the compliance of a scheme with its land designation, the benefits it may bring to the local economy, and the impact on local amenity. National Planning Practice Guidance confirms this position, stating that "*the protection of purely private interests such as the impact of a development on the value of a neighbouring property or loss of private rights to light could not be material considerations*". It is fully acknowledged in the Officer's report for this development, which was presented to Members of the Planning Committee, that local residents were very concerned about the impact of the proposal on their amenity. A balanced assessment of this impact was undertaken, and the proposal was ultimately found to be in accordance with both local and national planning policy, subject to the conditions attached to the decision.

6. Condition 30 of the approved development required details of the proposed landscaping to be submitted and determined under a condition application. Such details were submitted under application reference A/25/098808/CON and details of the planting can be viewed on the approved plans through the following link: Planning Documents. As planning permission goes with the land, I can confirm that the landowner(s) will be responsible for its upkeep.

7. The use of the buildings forms part of the planning approval and in this respect, they are authorised for Class Use B2 and B8 which means general industrial use and storage & distribution use. Information on the particulars of the end users are unknown to the Council as it is only the use that can be controlled by the planning consent. However, any future end users must abide by the terms of the approved planning permission.

8. Yes, the planning permission permits 24-hour use of the units and impact of these operating hours was fully considered in the Officer's report presented to Members in June 2024.

9. In accordance with statutory requirements and Wigan Council's Code of Practice for the Publicity of Planning Applications, a total of 99 neighbour notification letters were sent to properties in the vicinity of the site. In addition, two site notices were displayed at prominent locations around the development site, one near the access of the site and the other within Thistlecroft estate. These notices remained in place for the statutory consultation period. A press notice was also published by the Council.

10. The views of neighbouring residents is a very important part of the planning process, and the above public consultation process was carried out to gather such views. Whilst each and every one was taken into account in the assessment, Officers must take a balanced judgement in determining the acceptability of planning applications and this judgement is outlined clearly in the Officer's report which was presented to Members in June 2024.

11. I fully appreciate the concerns raised by residents living close to the site, particularly during the construction phase when the unfinished development can appear stark and intrusive. Officers within both the Planning and Enforcement teams are aware of these concerns and are actively monitoring the situation to ensure compliance with the approved plans.

12. This matter has been referred to the Council's Planning Enforcement Team to investigate this on site.

13. Due to the location of the buildings approved, the existing footpaths had to be diverted to ensure they remained available for use by local residents. The footpaths are located on the other side of the approved bunds from the neighbouring boundaries and as such were not considered to be located in such a way that would create a security risk for local residents.

14. Thank you for bringing this to our attention. The approved Construction Environmental Management Plan restricts the working hours on site from 08:00 to 18:00 Monday to Friday and 08:00 to 13:00 on Saturdays. This will be forwarded to the Council's Planning Enforcement Team for further investigation.

15. Officers have visited the site on numerous occasions. It is appreciated that the construction phase, when the development is unfinished, can appear stark and intrusive, however it remains the Council's view that the once the temporary construction phase is complete and the approved landscaping in place, the impact of the development on local residents will be acceptable.

16. It is acknowledged that there was a particular issue with dust earlier in the summer when the weather was particularly dry. Such concerns were dealt with by the Council's Planning Enforcement Team and the developer put in place a number of measures to mitigate the impact which appeared to resolve the issue. If you have any continuing concerns in this regard, please let the planning enforcement team know through this link - Planning Enforcement Reporting Form | Instructions – Wigan Council and this matter will be investigated further.

I trust that this response has now provided you with an understanding of the issues raised in relation to this development. I apologise if you feel that previous responses did not provide satisfactory answers to your queries. However, I have found no fault on the part of the Council in its handling of your enquiries or the planning application in question.

I hope the above information is of assistance and addresses the matters raised in your complaint. However, if you are unhappy with this response or with the way your complaint has been handled, you can ask for a review of your complaint at Stage 2 of our Complaints Procedure. If you wish to do this, you can ask the Chief Executive to arrange for an independent review of your complaint by contacting

the Complaints and Information Team at Wigan Council, PO Box 100, Wigan, WN1 3DS or email complaints@wigan.gov.uk, stating why you want your complaint to be escalated. Arrangements will then be made for an independent Senior Officer to investigate your complaint and respond to you directly.

Yours sincerely,

David Proctor
Assistant Director, Planning and Regeneration

Good morning,

Please can this be changed into a Stage 1 complaint.

Hi [redacted],

This relates to the Astley Business Park site; the complainant has contacted us through various methods. My responses to Cllr Roberts are attached, along with two MP responses on the same issues.

To help with responding, I've included some comments in red below.

Please note that two potential enforcement matters have been raised – 1) height of bund and 2) hours of construction work – I have referred both of these to [redacted] so that they can be set up formally.

Thanks

Please provide details of your complaint:I have received three responses since I enquired about the PLP Construction site in Astley, communication by myself through my local MP and Councillor. In each reply I get the same response without answering the questions and issues I have raised. I was very disappointed in [redacted] reply as said she didn't want to repeat herself. I replied to her email because she didn't answered the questions I had asked, Therese also said she had responded to Councillor Roberts but this wasn't the case (I have responded to Cllr Robers twice – attached). I would say that I have answered her queries which is why, in my last direct email to [redacted] I advised that she may wish to submit a formal complaint, as I don't seem to be able to provide the answers she is looking for.

Why did the building of the units commence after all the houses were built and sold if planning permission has always been there? An outline planning permission was granted in 2015 for mixed use of the wider site (residential and industrial) (A/15/81365/OUTMAJ) – two parcels of land received detailed approval (reserved matters) for housing, but detailed approval was never sought for the industrial element of the approved outline scheme. The approved Outline scheme did not include any restrictions on the timing of how each element came forward, the land designation of the site has never changed, and Officer's assessment of the proposal was carried out in full cognisance of the proximity of housing around the site.

Planning was adapted after a lot of houses were built, why was this allowed and the surrounding residential area not taken into consideration? The nature of the surrounding area was taken into account and this is clearly outlined in the Officer's report which was presented to the Planning Committee in June 2024 (a link for which has previously been sent). The approved application sought full planning permission for the development, this was not an application which was bound to follow the details shown in the 2015 Outline permission and as such the planning proposal was not adapted.

Why were units of this size allowed to be built in a residential area, original plans were for much smaller units and offices. As above, the approved application was not bound by the details shown in the 2015 outline application which sought only to establish the principle of development and not the detail. The approved units are located in a Primary Employment Area which is adjacent to a residential area, and they were deemed to be acceptable due to the reasons outlined in the Officer's report presented to Members in June 2024 which included the location of the units in respect of adjacent boundaries and the mitigation proposed in the intervening areas, i.e. the bund and associated landscaping.

How can planning be granted and not take into consideration the financial impact of hundreds of properties surrounding them? Our neighbours have been refused a mortgage, another can't sell her house because she has shared ownership. Lots of residents were offered these schemes to buy a

property in your area. What happens when families can't afford to pay their mortgage? It's a fact that these units have already devalued the surrounding houses significantly? The impact of the financial effect on local properties as a result of an approved development is not a material planning consideration in cases such as this and cannot be taken into account when making a balanced planning decision. This is because planning decisions must be based on a wide range of factors that prioritise the public interest rather than private financial concerns. In this regard, a planning decision must consider such matters as the compliance of a scheme with its land designation, the benefits it may bring to the local economy, and the impact on local amenity. National Planning Practice Guidance confirms this position, stating that "*the protection of purely private interests such as the impact of a development on the value of a neighbouring property or loss of private rights to light could not be material considerations*". It is fully acknowledged in the Officer's report for this development, which was presented to Members of the Planning Committee, that local residents were very concerned about the impact of the proposal on their amenity. A balanced assessment of this impact was undertaken, and the proposal was ultimately found to be in accordance with both local and national planning policy, subject to the conditions attached to the decision.

What trees and shrubs are going to be plated and who is responsible for the up keep of them? Condition 30 of the approved development required details of the proposed landscaping to be submitted and determined under a condition application. Such details were submitted under application reference A/25/098808/CON and details of the planting can be viewed on the approved plans through the following link: Planning Documents. As planning permission goes with the land, I can confirm that the land owner(s) will be responsible for its upkeep.

Who is buying/renting the units? The use of the buildings forms part of the planning approval and in this respect, they are authorised for Class Use B2 and B8 which means general industrial use and storage and distribution use. Information on the particulars of the end users are unknown to the Council as it is only the use that can be controlled by the planning consent. Any future end users must abide by the terms of the approved planning permission.

What will be the working hrs of the units, 24hrs? Large noisy vehicles, floodlit carpark? Yes, the planning permission permits 24-hour use of the units and impact of these operating hours was fully considered in the Officer's report presented to Members in June 2024.

Why were only 99 letters issued when this site effects hundreds of houses? In accordance with statutory requirements and Wigan Council's Code of Practice for the Publicity of Planning Applications, a total of 99 neighbour notification letters were sent to properties in the vicinity of the site. In addition, 2 site notices were displayed at prominent locations around the development site, one near the access of the site and the other within Thistlecroft estate. These notices remained in place for the statutory consultation period. A press notice was also published by the Council.

There were 70 objections why was this allowed to go ahead on this scale? The views of neighbouring residents is a very important part of the planning process and the above public consultation process was carried out to gather such views. Whilst each and every one was taken into account in the Officer's assessment, Officer's must take a balanced judgement in determining the acceptability of planning applications and this judgement is outlined clearly in the Officer's report which was presented to Members in June 2024.

Please tell us how you think we can make things right:Please answer my questions and concerns. You need to take into account the wellbeing and welfare of the local residents as these units are causing a lot of stress and anxiety.Are you monitoring the site? I fully appreciate the concerns

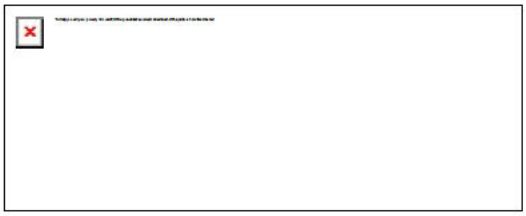
raised by residents living close to the site, particularly during the construction phase when the unfinished development can appear stark and intrusive. Officers within both the Planning and Enforcement teams are aware of these concerns and are actively monitoring the situation to ensure compliance with the approved plans.

The bund running around the units should be 3 metres in height ours is only 2 meters. As advised in the most recent response to Cllr Roberts, this matter has been referred to the Council's Planning Enforcement Team so investigate this on site.

We have a security risk as there is a footpath right at the back of our house, what are you going to do about that? Due to the location of the buildings approved, the existing footpaths had to be diverted to ensure they remained available for use by local residents. The footpaths are located on the other side of the approved bunds (from the neighbouring boundaries) and as such were not considered to be located in such a way that would create a security risk for local residents. There are many examples of existing footpaths in the local area that run much closer to local residential properties, such as public right of way 162 which runs along the immediate rear of properties on Withington Drive or no. 160 which runs alongside properties on Tanhouse Avenue and Riding Close.

The site is sometimes running from 7.30 and last night didn't stop until after 6.30. Thank you for bringing this to our attention. The approved Construction Environmental Management Plan restricts the working hours on site from 08:00 to 18:00 Monday to Friday and 08:00 to 13:00 on Saturdays. This will be forwarded to the Council's Planning Enforcement Team for further investigation.

Have you been out to the site to see the impact on the local area? I quote [redacted] and [redacted] will also be able to view the approved landscaping proposals which, when finalised/matured, will provide a significant level of screening from surrounding residential areas' These bunds will not provide significant screening to hide these monstrosities the scale and proportion is not acceptable. The landscaping projection is 15yrs! What do we do in the meantime? As mentioned above Officer's have visited the site on numerous occasions. It is appreciated that the construction phase, when the development is unfinished, can appear stark and intrusive, however it remains the Council's view that the once the temporary construction phase is complete and the approved landscaping in place, the impact of the development on local residents will be acceptable.



My priority is the well-being of my family and you are putting it at risk. My 9yr old daughter has recently been diagnosed with asthma and now requires an inhaler. The amount of dust that was flying around was clearly visible. We were unable to open windows or hang washing out as the garden was covered in thick orange dust. This is not acceptable. It is acknowledged that there was a particular issue with dust a number of months ago when the weather was particular warm; such concerns were dealt with by the Council's Planning Enforcement Team and the developer put in place a number of measures to mitigate the impact which appeared to resolve the issue. If you have any continuing concerns in this regard, please let the planning enforcement team know through this link - Planning Enforcement Reporting Form | Instructions – Wigan Council and this matter can be investigated further.

The amount of stress you are putting on myself and my husband is unbearable, he is going to work and coming home to this eyesore consequently worrying all night about the impact it will have on us

financially. I'm worried that it will make my husband ill and that will impact myself and my children and this is not acceptable.

Your service investigation case reference: COM006916

A Service Request has been assigned to your service as it has been submitted via the Make a Complaint form by a resident.

This case is not being treated as a complaint and has been triaged as a 'Service request only' by the Customer Support Team.

- Please acknowledge the service request as soon as possible through your complaint investigation case.
- An automatic response will be communicated to the resident telling them that you will be dealing with this as a service request and the case will be closed in JADU.
- You will need to follow your own business process for this request.

Assigned to wrong service

If you feel that this case has been assigned to the wrong service, acknowledge the service request and state it is not for your service where you can include reasons for re-assignment.

Kind regards

Customer Support Team

Subject: Re: Stop Notice, Astley Business Park

David.

I don't believe the development is being g carried out in accordance with the application, im also angered that a full section of housing wasn't even present on the slides from the meeting.

I don't believe all councillors on the committee had all the full and accurate details on the day as is evident with the missing houses.

The scale is disproportionate to the slides we were presented with and I feel we was misled even though I voted against it.

I understand you are reluctant to issue a stop notice against a company like peel, however no matter what the scale of the application be it a garden fence or a building development, a stop notice should be issued if we believe the application isn't being adhered too.

This would also give an opportunity for the developers to adjust their plans and add features such as a living wall on the side of the warehouses if needed.

I urge you to reconsider and take some positive action for the council rather than being passive and allow this monstrosity to continue in its current form.

Regards
Cllr Gerrard

Subject: RE: Stop Notice, Astley Business Park

Councillor Gerrard,

Thank you for your email.

A stop notice is a tool that the Council has to prevent development from continuing, where there is evidence of a breach of planning control that is causing severe harm. In this instance, while we understand the concerns being expressed, there is no evidence of any breach and so the Council has no basis to serve a stop notice.

Our team have visited the site on numerous occasions to carry out proactive monitoring, and we are content that the bunds (and the rest of the development) are being constructed in line with the planning permission. As you know the development is still under construction, and so there is further work for the developer to do to install fencing and the landscape planting.

I've attached a copy of the Council's planning enforcement policy as background. I trust this assists.

Regards
David

Subject: Stop Notice, Astley Business Park

Good Afternoon

Considering the negative coverage of the building activity at Astley Business Park and as a member of the planning committee, I would like a stop notice to be issued immediately so that all concerns that residents, councillors, MP and Mayor are raising are fully investigated, the main ones being the bunds not being installed as per the planning applications and that I believe that the committee was misled in regards to the size and scale of the development is much larger than what was perceived at the application meeting. This emphasises the importance of site visits on sites such as this given the scale and proximity to residents.

Please take this email a formal request that a stop notice is served immediately under TCPA1990 s.171e and if possible, an enforcement notice be brought back before the committee.

Regards
Councillor Gerrard

Subject: Fw: That's TV Request - Right of Reply

Good morning,

We have had another enquiry about the Astley warehouses from That's TV, similar to what we have been asked before. I've drafted a suggested response if you're happy with this?

A Wigan Council spokesperson said: "This application went through our planning consultation and committee process, which included letters being sent to neighbouring properties.

"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.

"We will continue to monitor the site throughout construction, ensuring this development brings new jobs and investment to the area is delivered properly."

Background information:

- *This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*

- *Ahead of this Planning Committee meeting, letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of around 70 addresses in the area. All objections raised were fully considered during the decision-making process.*

    - *Local authority officers have been on site and are in close communication with the developer and their construction partner to ensure all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, and will continue to do so throughout the duration of the development .*

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Good morning,
I'm a reporter with **That's TV Manchester**. We're preparing a segment for **Freeview Channel 7** about residents' concerns over the industrial development behind the **Henford Estate in Tyldesley**, currently under construction by PLP (part of Peel Group).
Residents have told us the project has had a severe impact on their quality of life and that they feel **consultation and engagement by the council were inadequate**, with some saying they were unaware of the full scale of the approved plans.
We'd like to give Wigan Council a **right of reply** to ensure our coverage is balanced. Specifically, we'd appreciate your response to:

1. Claims that **residents were not fully consulted** or informed about the scale of the approved development.
2. How the council is **monitoring the ongoing construction** to ensure planning conditions are met.
3. Any measures being implemented to **mitigate the impact** on neighbouring properties (screening, landscaping, etc.).

If possible, please provide a response or statement by **3:30pm today.**

Please let me know if Mr. Aidan Thatcher or another spokesperson is available for a short on-camera or phone interview.
Best regards,

Subject: FW: Tyldesley warehouses

Hi David,

As I believe you're aware, we've received an enquiry from the Leigh Journal following complaints from elected members about the Chaddock Lane warehouse (see email below).

Based on the recent presentation to residents and information already provided to members, I've been drafting some bullet points in response to the questions raised. Please could you take a look at the below and let me know your thoughts? There are also a couple of points for clarification highlighted in red if you're able to assist with those please.

Tree planting plans will not block the warehouses, could damage properties, and will take years to make any difference. The bunds are not reaching the required 3m, and residents themselves are having to measure them.

- We are proactively monitoring the development and the conditions on site, and are liaising with the developer about the timing and efficacy of the screen landscaping measures.
- These measures will significantly mitigate the impact on residents. Although the approved landscaping scheme will naturally take years to fully mature, a level of screening will be achieved immediately and will be enhanced year-on-year. The developer has confirmed that planting will commence within the next planting season which begins in November.

Councillors were kept in the dark – the application was logged in November 2023 under Tyldesley, not Astley, and we were not informed about the June 2024 planning meeting. Had we known, we'd have attended in person.

- All elected members receive a weekly list of planning applications from across the borough, allowing them to check for applications that may impact their ward – whether from within their own ward itself, or in neighbouring wards. This list is also available online along with other planning application information.
- Members are not notified of an application in their ward going to planning committee as a matter of course. However, all residents who had commented were notified and the committee date was indicated on the website. This information is provided 5 working days in advance of a meeting. (can you confirm this please? Might be good to include!)
- Letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal.
- The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.

Lack of consistency in the planning regulations - residents often get their extension rejected at planning for reasons ignored within this application - air quality, reduction of light, impact on neighbours. The planning committee never visited the area to see the true scale of the development.

- The need for a site visit is a matter for the members of the planning committee, who can defer an application if they consider a site visit is necessary.

Section 106 Money: £200,000 has been allocated to Bedford Colliery, but why is Astley – directly impacted – seeing no benefit?

- The Section 106 money was based on the applicant's need to provide a 10% biodiversity net gain (a requirement of the Places for Everyone, a part of the Council's Development Plan at the time of determination). The costs were calculated by the council's Greenheart team and a site in the locality was identified as being suitable for providing the required Biodiversity Habitat Units. No suitable sites within the Astley

ward were identified. (not sure on these acronyms – excuse my ignorance! Can you clarify please?)

The planning report's claim that 60ft units are "not detrimental" to residents is indefensible - and offensive.
Subjective opinion. Suggest we ignore. Agree

Noise, dust, air quality, 24/7 operations and risks to children have not been properly considered - damages to houses are now ignored by the council and PLP, without support to the residents.

- All the potential implications and risks of the development were fully considered. The planning officer's report to elected members includes a dedicated section on both noise and air quality. No evidence was found that such matters would have a detrimental impact on local residents, including children.
- We take all residents' concerns seriously and have acted to confirm and ensure ongoing compliance.

(How have we acted? Can we say anything else about supporting residents? – carried out site visits to check compliance, met with the site manager to discuss concerns,

Many thanks,

[redacted]

Subject: Tyldesley warehouses

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi guys,

I've had an email from Cllr Eastoe regarding the warehouse development in Tyldesley. She said she's attended community meetings with other councillors and is unhappy about aspects of the planning application.

It's quite long so I'll copy over their concerns, to see if the council wanted to address any of these specifically or add any further comments about the development?

At meetings with council officers and through residents' concerns, councillors have challenged the way this application has been handled. Key issues include:

Tree planting plans will not block the warehouses, could damage properties, and will take years to make any difference. The bunds are not reaching the required 3m, and residents themselves are having to measure them.

Councillors were kept in the dark – the application was logged in November 2023 under Tyldesley, not Astley, and we were not informed about the June 2024 planning meeting. Had we known, we'd have attended in person.

Lack of consistency in the planning regulations - residents often get their extension rejected at planning for reasons ignored within this application - air quality, reduction of light, impact on neighbours. The planning committee never visited the area to see the true scale of the development.

Section 106 Money: £200,000 has been allocated to Bedford Colliery, but why is Astley – directly impacted – seeing no benefit?

The planning report's claim that 60ft units are "not detrimental" to residents is indefensible - and offensive.

Noise, dust, air quality, 24/7 operations and risks to children have not been properly considered - damages to houses are now ignored by the council and PLP, without support to the residents.

Subject: Urgent Enforcement Request – Astley Business Park (Planning Application A/23/96226/MAJOR) – Consideration of Stop / Temporary Stop Notice

Dear All

I am contacting you in my capacity as a member of the Planning committee, concerning Astley Business Park, under planning reference A/23/96226/MAJOR, approved in June 2024.

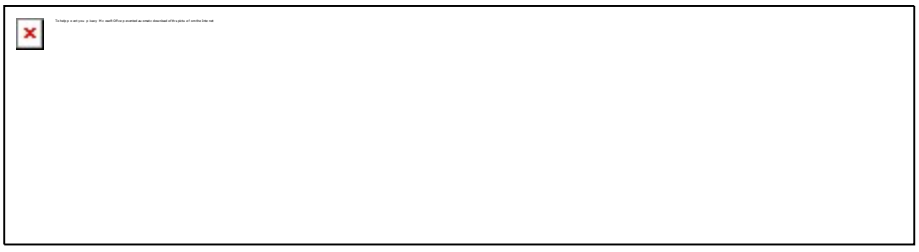
I have growing concerns that certain conditions of the permission are either not being adhered to or have not yet been properly discharged, and that ongoing works may be causing harm factors including but not limited to amenity, environmental, visual, traffic, health etc.

Adjacent residents have raised issues including visual impact, dust, noise, traffic, screening due to works proceeding before approved landscaping or screening is in place with concern that the risk of irreversible harm to local amenity and public health is increasing if enforcement does not act swiftly.

May I request the following.

1. That the Enforcement Team immediately review whether there is a breach of planning control, particularly in relation to conditions which have not been discharged but where works are underway.

2. That the Council consider issuing a Temporary Stop Notice or alternatively a Stop Notice, as continuing works are causing or will cause irreparable harm if not monitored.



3. That an officer report / briefing note be prepared and circulated to the Chair of the Planning Committee and members of the Planning Committee & Ward Councillors before the next Planning Committee meeting on the 7th of October outlining the enforcement status, recommended actions, and whether to defer any further works pending compliance. An update at the meeting would be welcome.

I believe these steps align with the Local Enforcement Plan and the Town Planning Enforcement Policy, as well as the Council's Customer Charter. Given the scale of Astley Business Park and its impact, prompt action is warranted.

Please acknowledge receipt and advise what actions are being taken and expected timescales if any.

Regards
Councillor Gerrard

A/23/96226/MAJOR

Land at Astley Park Way, Worsley

Proposal: Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works

Update following publication of Committee Report

Following the publication of the committee report, Officers wish to draw Members attention to some typos within the design, layout, scale and appearance section and the amenity section (pg 138, 140 and 141). Please note the publicised plans are correct and Officers have assessed the development on the basis of the correct dimensions. See amendments in red below:

*The unit proposed as 'Unit 1' measures **158m x 84m** (the report stated 15.8m x 8.4m) with a total height of 18.3 metres and located close to the northern boundary of the site.*

*Unit 2 as proposed is located to the west of the site and would measure **136m x 90m** (the report stated 13.6m x 9m) with a maximum height of 18.3 metres.*

*Units 3 and 4 as proposed are located to either side of the main accessway. Unit 3 measures **80m x 36m** (the report stated 8m x 3.6m) with a maximum height of 13.7m.*

*Unit 4 is the smallest of the proposed units, measuring **76m x 37m** (the report stated 7.6m x 3.7m) with a maximum height of 13.6 metres.*

*The proposed unit [Unit 1] will be set in approximately **30 metres** (the report stated 5m) from the northern boundary and **25 metres** (the report stated 4m) from the eastern boundary*

The side elevation of Unit 2, which will be blank, will face towards these neighbouring properties and a gap of approximately 30 metres (the report stated 5m) will be remain between the site boundary and the edge of the building.

Public Representations

Planning was undertaken in accordance with the Council's Code of Publicity for planning applications, statutory legislation – press, site and neighbour letters.

Circa 70 representations of objection were received up to 18th January 2024.

Details of the letters of representation are contained within the Committee Report. These include but are not limited to need; neighbouring amenity, impact on highway network and parking, infrastructure and services, wildlife, flooding and drainage, loss of greenspace, health, crime, climate change and land stability

Two additional letters have been received since the publication of the committee report. One reiterates their concerns relating to the above issues and the second asks whether the Officer recommendation will be accepted or if Members of the Planning Committee can take an alternative decision.

Public Representations

Furthermore, James Grundy MP (former) has objected to the development for the following reason:

- The warehousing units should not be built in such close proximity to the residential properties and schools.
- There will be an increase in pollution from ancillary vehicles and an increase in noise and lights 24 hours a day.
- Detrimental health effects on local residents and on local school children could arise.
- This area lacks the infrastructure for such development and it would cause congestion on the roads. The access road to this area is a single track and already very congested at certain times of the day.
- The local wildlife should be considered as this will take away more green space.
- The submitted site plan is not accurate, I have been informed that it does not reflect the residential aspects of the developments.

Assessment – Principle of Development

- **Sustainable Development** – Site lies within East-West core, complies with Policy SD1
- **Primary Employment Land** – Compliant with Saved Policy EM1A, PfE Policies JP-J2 and JP-J4
- **Planning Contributions** –Total contributions of £214,000 to be paid towards a mix of highway improvements and BNG; to be secured through a s106 Agreement.
- **Scheme benefits** – Investment into the borough during both the construction and operational phases, BNG enhancements, highway improvements and promotion of training and employment opportunities for local people.

Assessment

- **Design and layout –** 4 units of significant scale with individual parking and manoeuvring areas. The scale is commensurate with the designation of the land and is accompanied by a detailed landscaping scheme inclusive of boundary bunding.

- **Amenity considerations –** Impact on surrounding residential properties acceptable subject to the mitigation measures which include a landscaping scheme with bund and acoustic fencing.

- **Highways, access and parking provision –** Sustainable location with existing access road. Internal road layout is acceptable. Parking provision is acceptable. Public rights of way diverted but retained with continuation of existing links to adjacent bridle ways.

- **Trees, ecology and Biodiversity Net Gain –** Loss of informal open space (non-designated). Net gain for trees on site and significant landscaping scheme proposed including a buffer zone to adjacent dwellings. No harm to protected species; impact on wildlife dealt with by condition. Net gain for biodiversity delivered off –site.

Assessment – Technical Matters

- **Air Quality –** Dust control measures during construction will be obtained via CEMP, EVC points to be provided along with extensive tree planting. Development impacts not significant.

- **Noise** – Mitigated by design and siting of units, landscape bunds and use of acoustic fencing in certain areas. CEMP includes controls for construction noise.

- **Flooding and Drainage –** Site is within Flood Zone 1. Principle of proposed drainage scheme is acceptable. Further details are required through conditions.

- **Ground conditions –** Site lies within a Development High Risk Area in relation to coal mining. Standard conditions relating to remedial measures are required.

- **Low Carbon Development -** Energy Statement submitted which evidence the means through which the development will utilise low carbon sources.

Observations on representations

Loss of open/amenity space

- The site is not allocated as open space or located within the Green Belt, but within an allocated Primary Employment Area.

Proposal does not match that approved under the Outline scheme in 2017

- The Outline permission granted for this site in 2017 did not include details of the industrial element of the development as the scheme was in outline form only with only details of the access fully approved. The linked residential schemes obtained reserved matters which determined their scale, size and appearance. The industrial element of the outline scheme never received such an approval, hence the need for this application.

No site notice displayed by the applicant

- It is the responsibility of the LPA to display site notices. Two were displayed, one near the existing access and the other within the Thistlecroft estate.

Conclusion and Recommendation

- Proposals assessed on its merits against national and local policy
- No significant or unacceptable issues.
- Developer has agreed financial contributions totalling £214,000.
- Materials considerations indicate the application should be approved as it is line with the development plan when taken as a whole.
- It is recommended that Committee resolve to grant planning permission subject to the conditions contained and reasons detailed within the report and subject to the s106 Agreement to secure the financial contributions as detailed within the report.

Subject: Fw: URGENT REQUEST FROM ANDY BURNHAM: Industrial units in Astley

Hi both,

Would be good to get a steer on this on Monday. I'm concerned that if we attend we'll be put in a position of contradicting our Councillors in front of Andy.

Thanks
David

Hi [redacted], if this is a political meeting between the Mayor and ward members then I'd suggest it is arranged and we will confirm later whether officer attendance is needed.

The details you've got for the ward councillors are correct.

Regards
David

Hi David
Thank you for coming back to me.
Andy has made a public commitment to meet with the Councillors, so I think we need to get that arranged if that's OK please.
Can you confirm the details below are correct and I'll send an invite out. If you feel one of your officers needs to be present, please let me know.
Many thanks,

Hi [redacted]

We met all 6 of the ward Councillors last week (the site spans two wards), and a further meeting with the residents' steering group and Michael Wheeler MP is in the process of being arranged.

Mindful to avoid duplication so we wondered if a briefing just with Wigan officers and the Mayor might be a helpful first step.

If you could let us know how you want to proceed with the above in mind.

Thanks

David

Hi David

Thank you for providing the attached information.

Andy's asked that a arrange a meeting with the relevant councillors on Monday to discuss this issue.

I'm looking at 6 – 6.30 pm on Monday, 22nd September via teams.

Could you let me know who I should invite?

Many thanks,

[redacted],
Response from Wigan is that there are no concerns about the process (below). The decision was made a long time ago. I have attached some slides which have been sent to councillors and residents. These hopefully provide context for the Mayor but get back to me if there are any questions.
Many thanks,

Thanks,
Residents certainly disagree with the decision (taken by Planning Committee), but there are no concerns here whatsoever about due process, and the timeframe for JR elapsed months ago.
The attached set of slides gives a bit more background (the ward members have this already and I've just agreed for them to send it on to residents), perhaps if you have a look at this and then give me a shout if you need a further catch up.

Attachments: BBC NWT IV/STATEMENT REQUEST - ASTLEY WAREHOUSES

Importance: High

Hello,

To update- they are also planning to run this piece on lunchtime news today, so we need to provide a statement asap.

[redacted] - Do we recognise anything in the allegation that the units have completely changed, or are we content that they are as expected- it sounds like we are from the below, but just checking?

Aidan for info- original enquiry attached and this is the full address given- Astley Park Way, Chaddock Ln, Worsley, Manchester M28 1FJ

I've assumed these are the warehouses that [redacted] helpfully shared a member enquiry response about (below) and drafted up this as a starting point:

Aidan Thatcher, director of place at Wigan Council, said: "We fully appreciate the concerns raised by residents living close to the site, especially during construction when the unfinished development can appear stark and intrusive.
"Out Planning and Enforcement teams have been on site, and have verified that the building is in the right location and being built to the height as approved in the plans. The final plans include landscaping which will help to screen and soften the appear, and mitigate the impact on nearby properties.
"Details re consultation…
"We will continue to monitor the site throughout construction."

Ends

Thanks,

[redacted]

Subject: RE: Withington Drive, Astley- Warehouses

Afternoon [redacted]

If it's the same development I believe it is, Planning and Regeneration have received correspondence from elected Members on the matter.

The below is the body of text taken form one of those responses – given it was personal to a constituent please do not share or pass on the below. If any queries do come up, we'll be happy to engage with a response, but hopefully the below gives you a bit of context at this stage:

Thank you for your recent correspondence on behalf of your constituents regarding the development of warehousing units at Astley Park Industrial Estate, under planning permission reference: 'A/23/96226/MAJOR'.

I fully appreciate the concerns raised by residents living close to the site, particularly during the construction phase when the unfinished development can appear stark and intrusive. Officers within both the Planning and Enforcement teams are aware of these concerns and are actively monitoring the situation to ensure compliance with the approved plans.

Following a recent site inspection by one of our Planning Enforcement Officers, I can confirm that Unit 1 is currently under construction. During the visit, the Officer used a measuring tool to verify the height of the structure, which was recorded at 18.3 metres, a height consistent with the height of the unit on the approved plans. The unit is also correctly positioned in accordance with the approved site layout.

In direct response to your request, I have attached the following approved documents for reference:

- *The site layout plan, showing the location of all approved units.*
- *The elevational drawing for Unit 1.*
- *The landscaping scheme for the area surrounding Unit 1, including details of the bund and proposed tree planting.*

While the bund identified within the drawings has already been formed on site, the necessary landscaping works have not yet commenced due to the ongoing construction. Once implemented, the landscaping will provide additional screening and help soften the visual impact of the development on neighbouring properties.

In response to previous enquiries on this development, links to the approved plans and guidance on how to access them have been shared with residents. I acknowledge that the constituents who contacted you may not be aware of this facility. For ease of access, the approved plans can be viewed on the Council's website using the application reference number A/23/96226/MAJOR via the following link:

Search and comment on planning applications

Monitoring of the site by the Council's Planning Enforcement Officers is ongoing and will continue throughout the construction period. Further visits will be undertaken as necessary to ensure that the development is being carried out in accordance with the approved plans and conditions.

I hope this response provides clarity and reassurance to both you and your constituents that the Council remains committed to working constructively with local residents and the developer to ensure the delivery of a high-quality scheme, in full accordance with the approved planning permission.

Hope this helps, regards,

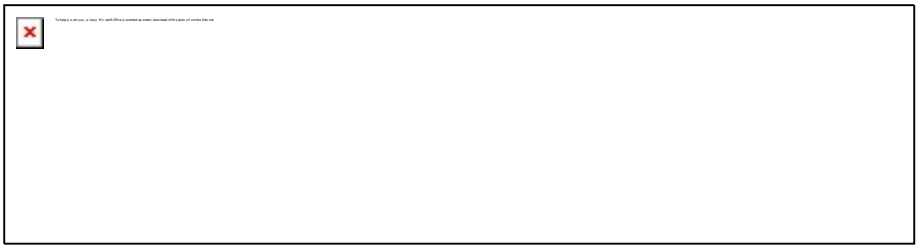
Hi [redacted]

We've been tagged into a facebook post about warehouses on Withington Drive- it's getting a lot of engagement so I'm expecting an enquiry on it.



The general jist is that people feel they are bigger and closer than on the plans, and they were not consulted.

Is there any background to this one please?

Thanks

Hello there, I hope you're well?

We'd like to request an interview/statement from Wigan Council about concerns residents have raised about planning permission that's been granted for four warehouses in Astley. Residents say that the plans were changed from low level units to something completely different without them being informed or given an opportunity to oppose them. They're concerned about the impact the size and proximity of the warehouses will have on residents houses, view and livelihoods.

Please can we request an interview or statement tomorrow.

Hi both

Further to my email below on behalf of Michael, please can I add an extra question following enquiries from residents at a community meeting this week:

- There is some concern that Whistl, which has taken on a lease for one of the buildings, will have on site fuel storage to service it's vehicles. Residents are concerned about the safety impacts of this, if true, on neighbouring properties. Please can you let me know if you are aware if there are any plans for this. Could you also please comment on whether there are any additional planning requirements for storing fuel on a site, or if the planning already granted would allow this.

Many thanks

Dear David and Aidan

Thank you for coming back with information on the enforcement visits. Michael has asked if you can provide further clarification on the following:

- More detailed information on your findings in the most recent enforcement visits and particularly the methods used to assess compliance with the Construction Environmental Management Plan
- Precise information on where the bunding work is complete, including confirmation of the height of the bund which is in place

- Confirmation of where the bunding is not complete, and an agreed date of when it will be completed by
- Precise information on the planting - what kind of planting will take place e.g. will it be a mixture of saplings and mature trees, a mixture of evergreen trees and other kinds of trees, and what height will the trees be
- Following reports of children developing asthma since the site began construction, please can you confirm whether air quality meters can be installed to measure the impact of the build on air quality in the area

Michael would find it very useful to walk the perimeter of the site with you and discuss the issues. Please can you provide some dates of when this can be arranged. Thursdays or Fridays are better for Michael due to the requirement for him to be in Westminster earlier in the week.

Kind regards

Dear [redacted],

Visits and actions have been undertaken as follows:

- 15/05/2025 – To check compliance with Construction Environmental Management Plan (CEMP) in relation to complaints about dust during period of very dry weather
- 29/05/2025 - Follow up visit to check compliance with CEMP again to ensure the site manager was continuing to adhere to its requirements
- 25/07/2025 – To check height of the frames of the larger units (Units 1 and 2). Laser equipment used to confirm max building height of 18.3m in accordance with planning permission.
- 11/09/2025 – walked around all of site, including site boundaries to check landscaping bund which was largely complete at this point. Checked general siting of the buildings, checked the spread of materials/dust on site, checked complaints log held on site by site manager (CEMP requirement). Discussed the planting of the bund and agreed a start on this in November ’25.
- 30/09/2025 (with Environmental Protection air quality specialist present) – to check compliance with the CEMP and get input on whether there were any other measures that the contractor should have in place. Content that they were complying with their CEMP and had extra mitigation measures in place that weren’t required by the CEMP. No areas witnessed on site which could lead to the wider dispersal of materials.

I trust this assists. We have received a Freedom of Information request on this topic as well and will be responding with the same information.

Dear Aidan and David
Further to the Teams meeting last week with the Astley Warehouses Action Group, and the response which Michael received from David last week, there are still a couple of outstanding pieces of information which we are waiting for.
In his letter to Councillor Molyneux, Michael asked for proactive enforcement action to be taken to address the concerns being raised by residents about the site. In your presentation to the group last week, you mentioned that you and other members of your team had visited the site on several occasions over the past couple of weeks. Please can we ask for reports on the actions you have taken, the inspections you have carried out and any proactive enforcement taking place.
Michael is happy to share this information with the residents to ensure that they have up to date and accurate information about the development and operation of the site.
Kind regards

Hi both

Further to my email below on behalf of Michael, please can I add an extra question following enquiries from residents at a community meeting this week:

- There is some concern that Whistl, which has taken on a lease for one of the buildings, will have on site fuel storage to service it's vehicles. Residents are concerned about the safety impacts of this, if true, on neighbouring properties. Please can you let me know if you are aware if there are any plans for this. Could you also please comment on whether there are any additional planning requirements for storing fuel on a site, or if the planning already granted would allow this.

Many thanks

Dear David and Aidan

Thank you for coming back with information on the enforcement visits. Michael has asked if you can provide further clarification on the following:

- More detailed information on your findings in the most recent enforcement visits and particularly the methods used to assess compliance with the Construction Environmental Management Plan
- Precise information on where the bunding work is complete, including confirmation of the height of the bund which is in place

- Confirmation of where the bunding is not complete, and an agreed date of when it will be completed by
- Precise information on the planting - what kind of planting will take place e.g. will it be a mixture of saplings and mature trees, a mixture of evergreen trees and other kinds of trees, and what height will the trees be
- Following reports of children developing asthma since the site began construction, please can you confirm whether air quality meters can be installed to measure the impact of the build on air quality in the area

Michael would find it very useful to walk the perimeter of the site with you and discuss the issues. Please can you provide some dates of when this can be arranged. Thursdays or Fridays are better for Michael due to the requirement for him to be in Westminster earlier in the week.

Kind regards

Dear [redacted]

Visits and actions have been undertaken as follows:

- 15/05/2025 – To check compliance with Construction Environmental Management Plan (CEMP) in relation to complaints about dust during period of very dry weather
- 29/05/2025 - Follow up visit to check compliance with CEMP again to ensure the site manager was continuing to adhere to its requirements
- 25/07/2025 – To check height of the frames of the larger units (Units 1 and 2). Laser equipment used to confirm max building height of 18.3m in accordance with planning permission.
- 11/09/2025 – walked around all of site, including site boundaries to check landscaping bund which was largely complete at this point. Checked general siting of the buildings, checked the spread of materials/dust on site, checked complaints log held on site by site manager (CEMP requirement). Discussed the planting of the bund and agreed a start on this in November ’25.
- 30/09/2025 (with Environmental Protection air quality specialist present) – to check compliance with the CEMP and get input on whether there were any other measures that the contractor should have in place. Content that they were complying with their CEMP and had extra mitigation measures in place that weren’t required by the CEMP. No areas witnessed on site which could lead to the wider dispersal of materials.

I trust this assists. We have received a Freedom of Information request on this topic as well and will be responding with the same information.

Regards

David

Dear Aidan and David
Further to the Teams meeting last week with the Astley Warehouses Action Group, and the response which Michael received from David last week, there are still a couple of outstanding pieces of information which we are waiting for.
In his letter to Councillor Molyneux, Michael asked for proactive enforcement action to be taken to address the concerns being raised by residents about the site. In your presentation to the group last week, you mentioned that you and other members of your team had visited the site on several occasions over the past couple of weeks. Please can we ask for reports on the actions you have taken, the inspections you have carried out and any proactive enforcement taking place.
Michael is happy to share this information with the residents to ensure that they have up to date and accurate information about the development and operation of the site.
Kind regards

Subject: GB News: Warehouses

Hello,

Just sharing the GB News enquiry:
I'm just reaching out as am hoping to obtain a comment regarding the Astley Business Park plans/ building work. I know there's been a lot of speculation and coverage both online and in the news, but was just wondering if it might be possible to interview someone from the council about this? Would be looking to do this on Friday afternoon if so! If not, could you please provide a statement responding to the following: - why was planning permission given? - what are you doing to support those residents who say their lives have been affected and are concerned about ever selling their homes?

Are you happy if I send the extended version of our response?
[redacted] – just confirming this is accurate? I know the report says 70 representations, but if it was 104 from individual people that's what I've used in the below if that's OK.

Aidan Thatcher, director for place at Wigan Council, said: "This planning application went through our planning consultation and committee process.
"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
"We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly."

For context:

- *This land has been allocated as employment land since 2006*
- *The outline planning application for this site approved the principle of industrial development on this site, which is an extension of Astley Business Park, in 2017.*
- *This application did not set final size or layout of the buildings, but we appreciate this planning process may be the cause of some of the confusion.*
- *The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*
- *Ahead of this letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 responses.*
- *The development will create around 500 on-site jobs, and another estimated 460 across Greater Manchester.*

Thanks,

[redacted]

Subject: ITV Granada: Astley warehouses

Good afternoon,

We have had the enquiry in the email below from ITV Granada. This is our statement:

A Wigan Council spokesperson said: "Local authority officers - including environmental protection air quality specialists - have been on-site and are in close communication with the developer and their construction partners.
"This is to ensure that all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, both for the development itself and while it is being built.
"We would encourage any residents who are concerned about any aspects of how the site is being delivered to report via our website."

Further information:

- *If residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times, and we will investigate where appropriate.*
- *The construction company has responsibilities to monitor conditions on site and will therefore be better placed to comment on day-to-day issues.*

ends

This piece is expected to be on the 6pm news this evening.

Many thanks,

Hello,
I work for Granada Reports, the ITV regional news programme in the North West and we're returning to the subject of the Asley Warehouses tomorrow,
We have spoken to a number of residents who tell us they are now suffering with breathing difficulties and asthma since the building work began.
You may be aware that this matter is also being investigated by the Environment Agency.
Can you confirm please if the council is aware of these issues? Do you have anyone available for interview? We'll be back in the area tomorrow and perhaps an officer or councillor would be willing to tour the estate with my reporter and camera - that would be great if possible.
Let me know your thoughts,

Subject: ITV This Morning: Warehousing

Hello,

We've had this from ITV:

> Hello, I'm from ITV's This Morning. I'm getting in touch because on today's show, we are speaking to [redacted], a resident in Wigan who is living nearby the warehouse construction site developed by PLP. During the item, [redacted] is likely to make the following claims: + [redacted] says locals were initially aware of small lever industrial units being built in the area, however 12 months ago - new updated plans for the building site were sent and residents were astonished at the sheer size of the plans. +It has largely affected their daily lives. [redacted] says during the hot UK summer, residents on the streets couldn't have their windows open due to fumes and dust pollution getting into the house. At its peak, they would have to clean their home twice a day because of all the dust that got in. +Unfortunately, [redacted] has lost hope that it would be possible to undo the plans already set in place for the construction. However, they hope they can push back on plans that the warehouse is currently set to operate 24/7 - as this would hugely disturb locals during the night with light pollution and noises of trucks going up and down their roads. + [redacted] believes the plans for this construction between PLP and Wigan Council was a done deal, and any objections brought forward by residents were scoffed away. I wanted to see if Wigan Council would like to provide a statement that we can fairly reflect during the item today? The item is taking place at 10am today, and we would need a response by 09:45am today in order to ensure we can include it during the item. Thank you, [redacted]

Just letting you know, and I can send the existing statement?

Aidan Thatcher, director for place at Wigan Council, said: "This planning application went through our planning consultation and committee process.
"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
"We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly."

Subject: PLP industrial site
Attachments: IMG_2455.jpeg; IMG_2457.jpeg; IMG_2456.jpeg; IMG_2458.jpeg; IMG_2459.jpeg

Hi Aidan

I am really concerned about the scale of the industrial site on Astley Business park. I'm concerned the trees won't have the effect you're looking for due to how large and tall the buildings are, and how close they are to some of the houses.
What's most concerning is the damage that's been done to people's houses. When we had the first heatwave the dust was across Tyldesley and Astley.
I also had to ask for vibration equipment for the houses near by - and the council so called went to the site about the two issues.
Amongst the press releases you'll see a few houses have big cracks on their house and flooring has cracked.

What can be done about this?
Are PLP and/or the council going to fix the damaged to houses or offer compensation?

I understand the route of insurances, but surely if this build was an appropriate distance away this wouldn't happen in the first place.
I don't think residents are taken seriously enough within this planning approval - and I'm disappointed in the lack of consultation considering how close it is.
I gather the planning permission on acknowledged its connections to the rest of the business park on Chaddock Lane and failed to make appropriate measures or care about the houses on the other side, just a few feet away.

What is going to be done to mitigate the issues?

Kind regards,
Councillor Jess Eastoe
(She/her)
Tyldesley & Mosley Common ward

Please note that I have a full time job in addition to my councillor role, so replies maybe slower than expected.

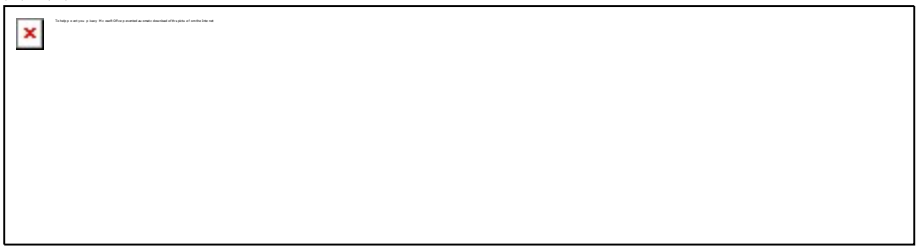
Subject: 5 News: Warehousing

Hello,

We've had another enquiry on this one:

Hello, Hope you are well I am from 5 news and we are covering the story about how Families who are living in the shadow of two gigantic warehouses have likened the experience to having a "cruise ship" land in their back gardens. The enormous steel structures, part of a 350,000 sq ft industrial site, tower over fences and hedges, completely overshadowing homes just meters away from the development. This would be for our program today I was wondering if we could get a right of reply from Wigan Council about the above, it would be used in tonight's program at 5 pm We would appreciate it if we can get a response by latest 2pm Thanks Hayford

Are you happy for me to send the same statement?:



Aidan Thatcher, director for place at Wigan Council, said: "This planning application went through our planning consultation and committee process.

Quite a bit of technical detail in the email below - *relating to a large-scale planning application for B2/B8 units at Astley Business Park that Therese has been dealing with & which received a Committee resolution for approval this week* – but I'd just like to draw your attention the comments I've highlighted in green below from the agent.

Big thank you from me to [redacted] and [redacted] for their work on this one, along with the wider Teams, it hasn't been easy at times, but the hard work and commitment they've put in allows for comments like *'overwhelming support for the scheme'* to be made.

Best regards,

Subject: RE: A/23/96226/MAJOR - Astley Business Park
Importance: High

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Good Morning [redacted]

First and foremost, thank you for your Committee presentation on Tuesday, which we felt was excellent and clearly dealt with Members' queries and lead to the overwhelming support for the scheme. We were also really pleased with [redacted] and the Environmental Protection Officer's fielding of questions from the Committee. It was an excellent Committee experience overall, so we wanted to thank you and fellow officers for that in particular, as well as the support throughout the pre-application and application determination stages to get us to this point.

We are now naturally keen to get the S106 finalised and the decision notice released. PLP's solicitors should be in touch imminently (if not already) with the Council's solicitors to finalise the numbers and obligations for the highways and BNG contributions.

Whilst that is progressing in the background, there are two pressing matters that we would be grateful for your assistance with:

Issue 1 - Footpath diversion/closure orders

As you know, we are concurrently progressing (via the Government Officer North East) applications for the various footpath diversions and closure orders required as part of the development. We have an outstanding single objection that is causing issues in terms of progressing the orders, which I think I have mentioned previously.

The Government Office case worker suggests that until evidence of a permission is provided this single objection cannot be overruled.

Whilst I appreciate, we only have a resolution to grant at this stage, we were going to send any documentation we could provide to the Government Office that confirmed the Committee's resolution in writing. To my mind, only the minutes of the Committee will provide such formal documentation of the Committee resolution. Assuming this is the case, please can you advise when the minutes of the Committee are typically published?

Issue 2 - Condition 5

As per the email trail below, I have raised concerns that the team has regarding condition 5 and specifically the requirement for additional gas monitoring requirement and the trigger point for undertaking such works (essentially parts 1 and 2 of condition 5). I appreciate your and the EP Officer's position but perhaps I haven't made the timing issue fully clear and so I set this out below so that we can discuss the matter further and establish what options are available to us post-Committee to resolve the trigger point issue.

5. No development approved by this planning permission shall commence until a remediation strategy to deal with the risks associated with contamination of the site in respect of the development hereby permitted, has been submitted to, and approved in writing by, the local planning authority. This strategy will include the following components:

Post any demolition necessary but prior to any further development commencing:

1. An updated site investigation scheme following on-site pressure grouting, including the results of subsequent additional gas monitoring, an updated ground gas risk assessment, and a combustion assessment, identifying the risk to all receptors that may be affected, including those off-site.
2. The results of the updated site investigation and the detailed risk assessment referred to in (1) and, based on these, an options appraisal and an updated remediation strategy giving full details of the remediation measures required, including a Gas Protection Design Report if gas protection measures are required, and how they are to be undertaken.
3. A verification plan providing details of the data that will be collected in order to demonstrate that the works set out in the remediation strategy in (2) are complete and identifying any requirements for longer-term monitoring of pollutant linkages, maintenance and arrangements for contingency action.

Prior to the occupation of the development:

4. Prior to any part of the permitted development being occupied a verification report demonstrating the completion of works set out in the approved remediation strategy and the effectiveness of the remediation shall be submitted to, and approved in writing, by the local planning authority. The report shall include results of sampling and monitoring carried out in accordance with the approved verification plan to demonstrate that the site remediation criteria have been met.

Any changes to these components require the written consent of the local planning authority. The scheme shall be implemented as approved.

As mentioned in my emails previously, the trigger point will affect construction programme – I understand this impact would potentially be severe if not resolved.

The condition, as drafted, would allow the on-site pressure grouting to take place, which is fine. The subsequent requirement to provide an updated site investigation scheme following the on-site pressure grouting is also fine. **However,** the updated site investigation scheme has to include results of subsequent additional gas monitoring – only once such gas monitoring is complete could the updated site investigation scheme be submitted for approval and then subsequent discharge. The issue is that gas monitoring is likely to be a 3-month period (this is a requirement of guidance/legislation I understand and cannot be undertaken for a shorter period). There will also then be additional time required to prepare the report with the results/evidence and submit the report to discharge the condition and await formal approval – potentially a further 2 months. This would lead to a potentially 4-6 month period where the contractors can't progress anything on site if the gas monitoring elements of condition 5 parts 1 and 2 remain as a 'Pre-commencement' condition.

In summary, if the condition remains as pre-commencement then basically the earthworks has to pause after the grouting until the condition is satisfied via the submission and approval of the gas monitoring results/report, which could mean a minimum 6 month period from commencement of on-site pressure grouting and a commencement of the development, which will have a significant impact on build programme overall.

Hopefully, the illustration below will assist with this issue we have currently:

1. <u>Pre-commencement (as per current trigger point)</u>

Grouting works undertaken and completed -> Gas monitoring following grouting (c.3 months) -> Gas monitoring report prepared and submitted to discharge condition (c.2-4 weeks following end of gas monitoring) -> discharge condition (potentially up to 2 months) -> Start of construction (c. 6 months from grouting works being completed)

2. <u>Pre-occupation (if trigger point amended)</u>

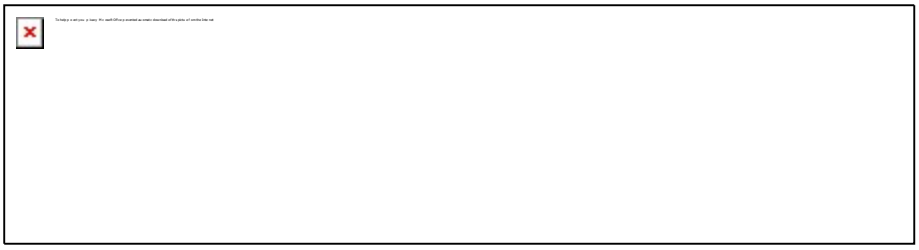
Grouting works undertaken and completed -> Gas monitoring (c.3 months) concurrent with start of construction -> Gas monitoring report prepared and submitted to discharge condition -> discharge condition -> Occupation of development

The amended trigger point for submission and approval of the gas monitoring results prior to occupation (as per option 2 above) would enable construction to commence and not impede build programme. **Crucially**, it would still ensure that prior to **any** occupation of the development, the results of the additional ground gas monitoring would have been submitted, reviewed and signed-off by the Environmental Protection Officer before any building is occupied, thereby ensuring the buildings future users would not be at risk (which ultimately is the purpose of the condition and further monitoring).

I'm not sure what bandwidth you have following the Committee resolution to grant in terms of adjusting trigger points, however if we can agree (whether through an amendment now prior to the decision notice issued or via a subsequent amendment application) that the relevant parts of condition 5 are linked to occupation (or at the very least prior to commencement of / installation of floor slab) then we can at least commence the earthworks during the c.3 month gas monitoring period.

<u>Please could we arrange a meeting with you, potentially [redacted] and the Environmental Protection Officer ASAP</u> that to discuss this further and ascertain what options we have to amend the trigger point for the condition to ensure that the build programme is not unduly impeded and the scheme can be implemented as soon as feasibly possible. We are happy to meet in person or via Teams – whichever is quicker and more feasible for all parties – in order to resolve this matter.

Thanks again for your help and hopefully we can get this issue resolved soon.



Kind regards

Subject: RE: Astley Warehouses

Hi David

[redacted] and I visited the site this morning and met with [redacted], site manager. Here is a summary of our findings:

No particular high risk dust sources of concern at this point in construction. The earth mounds around the boundary are mostly compact and vegetated. One mound that is currently being added to will be compacted with priority after our suggestion (this is the section of the bund in the south east corner of the site which has not yet been complete) . This should minimise wind whipping of loose materials on the mound to the adjacent residential. No visual evidence of any dusts settled in the residential areas beyond the boundary, site was well dampened and trackout minimal. Aggregate piles are mostly stones, so not highly dust generating. I did notice one sand aggregate pile near the office that was in use for concrete mixing. I have advised that all fine particulate aggregates and other similar stocks are covered with sheeting. This was agreed.

The site manager produced evidence of daily visual inspections and PM10 monitoring was shown. This is being done three times a day (morning, midday, and afternoon). The Dust Management Plan was also shown to us. All other logs as per the CEMP are being kept and updated. A copy of the IAQM Risk Assessment recommendations (taken from the applicants AQ assessment submitted as part of the planning application) was discussed and this highlighted that, where practical, the stated measures are being undertaken. We discussed that the site has incorporated measures to control AQ and dust beyond and in addition to those in the CEMP – e.g the PM10 monitoring. On this basis, it was advised that the IAQM RA is reviewed and all measures that are being used on site are inserted into the CEMP as a revision of the live document via condition discharge.

We discussed the recent request for extended hours of operation for the specific purpose of power floating operations. The site manager confirmed that the activities would be internal only, carried out by two operatives using a machine which makes a similar sound to a generator. The wagons bringing the concrete on site would arrive during permitted hours (i.e. before 6pm) but the power floating operation would continue until midnight Monday-Friday for a period of 5 weeks, depending on site conditions. The site manager advised that the operators could park outside of the site so that no vehicles would enter or leave during the extended hours. From what we were told this morning, it sounds like the activities would have very little impact on the amenities of local residents and I was satisfied that the site manager had explored all other alternatives but given the nature of the process, none avoid working beyond the permitted hours. My view on this is to invite this amendment to be included in the application to discharge the CEMP again (as outlined above). Does this sound reasonable?

[redacted] and I were satisfied that there are no further measures required to minimise the stated impacts at this time. Furthermore, it was noted that the majority of higher risk works have been completed, and it is more a case of keeping on top of the measures in place, stepping up control measures where applicable, when direct/detailed complaints are received, and being vigilant during the remaining earthworks and concreting. The site manager was asked if they

had received direct complaints on this subject and they confirmed they had but they weren't specific to location/time etc but more of a general complaint. Also, the site manager confirmed that they had received no direct complaints from the local school.

Apologies for the detailed response but I hope this helps in advance of your meeting on Thursday.

Regards,

Good morning Christine.
I just wanted to keep you informed of trends developing via the residents complaints of late.
More and more complaints of rat infestation.
Several parents have notified us of breathing problems developing in children. Parent speaking to [redacted] (MEN) re her daughter's recently diagnosed asthma.
Lagging from the site (dangerous if inhaled or touched) being blown onto pathways and into peoples gardens. (TANRO informed)
Thanks again for all your support. We have a Teams meeting with Proctor / Thatcher scheduled for October 2nd.

Subject: Awaiting response to Open Letter

Aidan,
On Wednesday last week, we published an open letter to Wigan Council accompanied by a video highlighting just some of the issues we have faced in the planning and construction at Astley Business Park.
With more than half a million views and thousands of supportive comments / likes, it's very alarming that the one comment or reply we haven't received is from Wigan Council.
Can you please address our letter, which is as follows:
Open Letter to Wigan Council & PLP
Wigan Council and PLP, you have betrayed us.
Our community is being forced to live in the shadow of four giant warehouses, 18 metres high, dumped next to our homes and our schools.
It is destroying people's lives.

Neighbours who never needed medication are now on anti-depressants. People are lying awake at night from stress. Families sit at the kitchen table in tears because their homes cannot be sold. Children breathing in dust clouds are already suffering with health problems, and they will now grow up under floodlights, with diesel lorries thundering past 24 hours a day, seven days a week.
And you let this happen.
The maps given to the Planning Committee did not even show many of our houses. It was as if we did not exist. Ninety-six objections were submitted, yet the officer's report claimed there were only 70.
A field full of wildlife and mature trees has been ripped apart, and the warehouses are now dangerously close to homes, raising serious fire safety issues.
And the worst thing. At the planning meeting, those who spoke up to object were publicly laughed at by the councillors who are supposed to represent them. One even suggested 'ask them to turn the noise down after 8pm'.
You have left us without any communication or support to deal with the impending 24/7 HGV noise, reversing alarms and pollution. Floodlights blasting into bedrooms. There have been cracks in homes, sales falling through, house values hit, and for what? A Whistl factory powered by automated robots, which will supposedly bring jobs to the area.
To add insult to injury, nearly £200,000 of "biodiversity money" from PLP, has gone to Bedford Colliery, miles away. Not a penny of it in our area. We have lost our fields and wildlife, and are left with grey prison walls and a concrete jungle.
We want answers. We demand accountability from the people who signed this off and not simply the suggestion of planting some saplings that may make a small difference in 30 years' time.
We want to know why our objections disappeared, why our houses were missing from the maps, why the consultation was rushed and handled so badly.
We want proper fire safety and environmental checks.
And finally, we want a real solution going forward.
We are not going away. We are over a thousand strong, and have the nation backing us.
You can bulldoze fields.
You will not bulldoze us.

Thanks [redacted]t,

Appreciate you setting out the position which is what we anticipated.

A short catch up at 10 on Friday would be useful however. @[redacted] my other meeting can be cancelled please as it isn't needed, I'm fine to cover this if Aidan cannot join.

Regards
David

Hi David,

The head of marketing and PR at PLP is [redacted] but she is presently on maternity leave.

You will probably already have established that PLP have not made any public comment regarding the current media interest as we have made the decision to continue to focus on delivering the scheme in line with the planning consent and any specific site enquires have been dealt with through TanRo our main contractor who we believe are doing a good job in the circumstances.

Whilst I would of course be happy to catch up I think it is useful to understand our position on this in advance.

I could do 10 am on Friday on Teams if this works.

Thanks,

[redacted]

-External communication-
[redacted],

I'm reaching out regarding the ongoing press and public attention re PLP's scheme at Astley Business Park. If you aren't the right person to approach about this please feel free to pass it on as appropriate.

The contractor's site team have been extremely helpful which we are grateful for, but given the level of interest currently I was hoping we could also get half an hour in the diary on Teams over the next few days, for a higher-level check in on our respective approaches / responses.

If that is doable please could you liaise with my PA [redacted], copied in. From our side it would be myself, our Place Director Aidan Thatcher, and our media lead [redacted].

Many thanks in advance.

Regards
David

Hi both,

I think we'll need to hold off responding to this until we know what the external stakeholder support is going to look like, and how messages are going to be landed with the residents going forward. At present the fundamental ask here is for the permission to be revoked and the warehouses taken down.

Happy to discuss.

Subject: Response from Residents' Group Regarding the Astley Warehousing Development

Dear Alison McKenzie Folan OBE

Thank you for your letter regarding the Astley warehousing development. I have read it carefully and to make my response as clear as possible I have addressed the key points you raised. I apologise for the length of this email but every point is relevant to understanding the full context and concerns of residents.

The residents' group wants a fair outcome. These warehouses are far too large and should never have been approved in this location. Their sheer scale and proximity to homes and the school have devastated people's lives. No rational person could consider it acceptable to build such massive industrial buildings so close to family housing. We want clarity on what will replace them. We are not opposed to development of the land but we are opposed to 18.3 metre high 24 hour industrial units being built in our back gardens.

Planning permission was granted on 11 June 2024. We now know there was a six week window for a judicial review. Only 99 consultation letters were issued and several were sent to businesses rather than residents. Many of us myself included were told we had received a letter but never did. The only public notices were a small announcement in the Leigh Journal which many households do not receive and two A4 notices on lampposts. For a development of this scale that cannot be described as meaningful consultation.

In September 2015 Barton Willmore, one of the UK's leading planning and design consultancies, carried out an assessment on behalf of Peel Investments and stated:

"There is no demand for the type of large units originally proposed for the site because of its location away from the key M6 Corridor, the congestion which exists on the A580, and its close relationship with adjacent residential areas."

A decade later congestion on the A580 has worsened, traffic pressures have intensified, and several hundred new houses have been built in the area which were not present in 2015, further increasing congestion. Yet large scale warehouse developments have now been approved on the same site. If Barton Willmore's professional assessment deemed the location unviable and unsuitable in 2015 what has materially changed in the intervening years to justify these proposals?

Many residents on the Rowlands, Redrow, and Eccleston estates bought their homes through the Help to Buy: Equity Loan and Shared Ownership schemes which are UK Government initiatives administered by Homes England. These schemes were intended to help families invest in long term homes within stable residential communities. The construction of 18.3 metre high warehouses directly behind these estates has severely reduced property values leaving some residents at risk of negative equity. Many are now struggling to sell their homes with sales falling through or potential buyers deterred by the prospect of living with large industrial buildings dominating their back gardens. This outcome undermines the purpose of the schemes and raises serious concerns about planning transparency and consideration for existing homeowners.

The construction disruption has been horrendous. Although the contractor claims to be part of the Considerate Constructors Scheme, behaviour on site shows otherwise. Noise levels are extreme, work has taken place outside agreed hours, radios are constantly blaring, and there have even been

confrontations with residents. At the start of construction workers drew water from the local mains leaving homes with little or no water pressure.

We keep being told that the Council is “monitoring the site” and is satisfied that work complies with planning permission. With respect that is not what residents see. I have worked in construction for 30 years and raised concerns with the site manager [redacted] in May before the steelwork went up that the bunds were not the correct height. The approved plans show they should be three to four metres high; they are currently just under two. The height directly affects both visual impact and noise mitigation. The Tetra Tech noise assessment specifies this clearly. Planting a few shrubs does not achieve the same result.

I therefore request proof, actual measured data, showing that the bunds meet the approved design. If the Council is satisfied please share the evidence and measurements. Without that we cannot accept that proper monitoring has taken place.

When the site first began operating around January or February one of the first works completed was a new footpath running behind my property. Shortly afterwards there was a break in, someone drove a vehicle down that new path to access the site and steal materials. The following Monday I visited the site office to inform the manager [redacted] and suggested they check for missing tools and strengthen the fencing. During our chat I asked what was being built as I had never received a consultation letter. His reply was “Don’t worry, you will only see the roof of these warehouses from your bedroom window.”

That was completely untrue. From my garden patio I can see the entire warehouses including the main entrance. Multiple residents have asked [redacted] what will be planted on the bunds; he gives different answers each time, “trees”, “wildflowers”, and so on. It is clear he has not checked the plans. The soil being used also does not meet the specification of 600 mm subsoil plus 300 mm topsoil. It appears to be dumped material from May. Yet we are told the Council is satisfied with progress which cannot be correct.

You mentioned that residents have been given information on how to report breaches. I have not received any such guidance and have had to chase everything myself. I have contacted Andy Burnham, [redacted] the site manager, local councillors, Michael Wheeler MP, PLP the architects who did not respond, Tetra Tech who carried out the noise assessment, Tanro, your good self, BCA the landscaping contractors responsible for planting on the bunds who could not provide any information about what they were planting, Greater Manchester Fire and Rescue who initially did not even know the site existed when I contacted them in July, Socotec the building inspectors who provided very little help, Wigan Building Control and the Building Safety Regulator. Despite reaching out to so many parties I have received very little meaningful response or action.

Regarding Garrett Hall Primary School the Council should actively visit and speak with the Headteacher rather than leaving it to her to make contact. The school sits beside the site and the children face the same noise and disturbance as nearby residents. It is inconceivable that she would not wish to discuss the issue unless constrained by her employment with the Council.

Although the Planning Committee decision was made in a public meeting most affected residents did not know it was taking place. The consultation process failed to engage the community. Of the roughly 50 to 55 thousand words submitted in objection residents’ views were reduced to a few bullet points. That is not a fair reflection of public sentiment. Consultation may not be a referendum but when the impact is literally in our back gardens proper effort should have been made to inform and involve us.

We are calling for an independent review because residents have no confidence that internal discussions with the same officers who approved the scheme, namely David Proctor and Aidan Thatcher, will produce a fair outcome. An independent review would bring transparency, accountability, and reassurance that the process has been properly scrutinised.

I also invite you personally to visit the site and walk along the residential boundaries on the Rowland, Eccleston, Withington, and Tanhouse estates. Please do not just tour the industrial side. Come and see what residents live with daily.

When Aidan and David met with us they gave us 45 minutes of their time. While we appreciated the meeting one question stood out: why did residents have to form a group and organise a meeting rather than the Council engaging proactively before work began? Had there been an open meeting in a community hall residents could have understood the plans and acted within the six week judicial review period. Instead by the time most of us learned of the plans it was too late.

Our position remains clear: these warehouses are completely out of scale with their surroundings and have had an unacceptable impact on our community. We are asking for the warehouses to be removed and for future projects to not be allowed to operate 24 hours a day seven days a week.

Thank you for taking the time to read this response. The residents' group would welcome a meeting with you directly or your visit to the site to see first hand the scale and impact of this development. We hope the Council will now take meaningful steps to review the situation and work toward a fair and just resolution.

Kind regards
[redacted]

> Thank you for emailing me regarding the warehousing development in Astley. I understand the level of interest that this development has prompted, and I am sorry that I have not had the opportunity to reply until now. I have read the emails that you sent as well as a number of the enquiries submitted by other people, and I have also spoken with Aidan and David following their meeting with the residents' steering group.
>
> I understand that the group have submitted a list of questions for the Council to answer, and I hope that you will find the answers useful when this has been done. I also pick up some key points from your email below.
>
> Before turning to these points however, I did want to seek clarification as to the outcome that the group is asking for. Planning permission was granted for the development last summer and was not challenged legally at that time, so as far as I am aware the group are not asking for it to be revoked at this stage. If my understanding on this point is correct, then I would be grateful if the group could set out what it wants to achieve, as that will help the Council to respond with appropriate information and advice going forward.

I am sorry to hear about the disruption that residents are experiencing while the development is under construction. Regrettably a degree of disruption can never be completely avoided, however it is important that the developer is held accountable for complying with the conditions on their planning permission. The Council has been proactively monitoring the development and has liaised closely with the site manager to ensure that the conditions are being complied with. The site is still under construction as you know, but I can confirm that at this stage we are satisfied that the development, including the bunds, is being built in accordance with the planning permission. We have provided residents with details of how to report any breaches, and my team have also (via ward Councillors) offered a discussion to the head of Garrett Hall Primary School – this offer has not been taken up to date but remains open.

Turning to the decision to grant planning permission, this was taken by the Council's Planning Committee made up of elected Councillors, in a meeting that was open to (and attended by) the public. The issues that had been raised through consultation on the application were reported to Committee, who had the opportunity to ask questions of officers before debating the proposal and voting on a decision. The Committee operates on a quasi-judicial basis and is tasked to consider whether planning applications conform to the Council's adopted policies; if they do then the default position set out in national policy is that applications should be approved. The role of public consultation in this process is to identify areas where particular attention needs to be paid to whether a proposal complies with policy; it is not a referendum, although the number of comments on a particular topic is relevant and forms part of officers' reports to Committee. I entirely respect the fact that you disagree with the decision and the steps that the Council took in consulting on the application, however in line with my earlier comments I would welcome the group's view on what it would like an independent review to achieve, so that we can determine next steps.

In relation to engagement and communication with the group, I am aware that Aidan and David met them and have committed to responding to a list of questions that the group would collate. This is an important next step and I have asked to be kept informed on progress and the key points that emerge.

Thank you again for taking the time to write to me. I hope you will find this useful in understanding how the Council is responding to the concerns being raised, while also being open and honest about where we are in the process given Committee's decision last summer. Our specific next steps will be informed by the questions that the group wants to ask, as well as the confirmation of the outcomes it is seeking, so I look forward to my team receiving both of those in the near future.

Kind regards

Alison

Subject: Follow-up: Request for Acknowledgment and Independent Review of Astley Parkway Development

Dear Alison Mackenzie Folen, OBE,

I hope you are well. I am writing again to follow up on my previous emails regarding the B8 warehouses on Astley Parkway. I completely understand that you may not have had the opportunity to respond yet, but I would be very grateful if you could at least confirm that my messages have been received.

As residents of the Astley Action Group, we continue to be deeply concerned about the way this development has been handled. In our recent Teams meeting with Aidan Thatcher, David Proctor, and several councillors, residents were told we had only 45 minutes to discuss this issue of major importance. Although the meeting slightly overran, 25 minutes were taken up by a slideshow one that we had previously requested not to be shown because we knew time would be limited. As a result, we were left with very little opportunity to ask even a fraction of the hundreds of questions gathered from residents.

The lack of meaningful communication and consultation from the council and the planning department has only deepened the community's frustration. For a development of this magnitude classified as a major planning application, it is astonishing that only 99 letters were sent out and a few A4 notices were placed on lampposts. That cannot be considered proper public engagement. Surely a development of this scale should have involved a public meeting, perhaps in a local community hall or church, where residents could ask questions and express their concerns directly.

When a planning application receives over 90 objections, this should trigger a deeper review, not simply be noted and set aside. What was the purpose of asking for residents' feedback if those objections were effectively ignored? Why was it left to volunteers like us to form an Action Group and act as the go between for the entire community? We are ordinary residents trying to represent our neighbours, yet the

responsibility for engagement and transparency should rest squarely with the council.

Adding to this, we are still being asked to direct our concerns to Aidan Thatcher and David Proctor the very individuals most closely involved in the planning process. This cannot produce the independent or transparent answers that residents deserve. It feels as though we are being asked to seek accountability from those who have the most to defend.

For all these reasons, we are calling for a fully independent review of the planning process, the communication with residents, and the decision to allow warehouses of this scale to be built so close to family homes.

Please could you acknowledge receipt of this email and advise whether such an independent review can be commissioned.

With best regards,

[redacted]

Astley Action Group

Astley Action Group

On 1 Oct 2025, at 09:48, [redacted] wrote:

Dear Allison Mackenzie Folen, OBE,

The B8 warehouses currently under construction on Astley Parkway have taken residents completely by surprise. While the land was allocated for development, few of us anticipated the scale of what is being built, leaving residents with far more questions than answers.

The rapid construction, combined with weeks of choking dust over the school summer holidays when children should have been able to play safely outdoors, this has caused significant distress. Alongside the loss of natural light, property values have been adversely affected. Despite raising our concerns, residents feel largely ignored.

We are particularly alarmed by the lack of respect shown by the builders. Dust suppression has been ineffective, and heavy machinery has routinely operated far outside the permitted hours of 9:00 a.m. to 3:30 p.m., running from 7:00 a.m. until 6:00 p.m., as our video evidence confirms. Builders have also

tapped into the water supply, leaving residents without access in the mornings and preventing children from completing basic routines such as brushing their teeth before school. In some cases, verbal exchanges between builders and residents have increased stress and tension in the community.

The bunding around the warehouses does not align with the original plans. These bunds were intended to reduce noise and mitigate the visual impact on gardens and the estate. Without them, residents face unacceptable noise levels and a lasting negative effect on the character of the neighbourhood.

Safety is a further serious concern. The warehouses are constructed extremely close to residents' homes and just 30 metres from the school playground. In the event of a fire, particularly at night, the lack of adequate space for emergency services could have catastrophic consequences. Construction noise is also negatively affecting children's learning and well-being.

This development has attracted significant public attention, including coverage on television, in newspapers, and on the radio. The Astley Residence Action Group maintains a Facebook page with over 2,000 members, with posts reaching millions online. The whole country is watching, as B8 warehouses have never before been built so close to residential homes.

We also wish to flag serious concerns about the planning process itself. Some plans submitted to councillors appear inconsistent, and Councillor Stuart Gerrard requested a stop notice due to these concerns.

As Chief Executive, you are ultimately responsible for ensuring planning processes are robust, transparent, and enforceable. In light of the issues outlined above, we respectfully request an immediate independent review of the planning process and any enforcement failures. We also ask that the planning team increase support and meaningful communication with the community, rather than relying solely on public statements about landscaping.

This Thursday, the Astley Residence Action Group will be meeting via Zoom with David Proctor to discuss these concerns further. We would greatly value your insight and support and hope to keep you informed of the discussion and any outcomes. Your leadership is crucial to ensuring that the concerns of local residents are taken seriously and acted upon.

With best regards,

[redacted]

Astley Action Group

Subject: Response from Residents' Group Regarding the Astley Warehousing Development

Dear Alison McKenzie Folan OBE

Thank you for your letter regarding the Astley warehousing development. I have read it carefully and to make my response as clear as possible I have addressed the key points you raised. I apologise for the length of this email but every point is relevant to understanding the full context and concerns of residents.

The residents' group wants a fair outcome. These warehouses are far too large and should never have been approved in this location. Their sheer scale and proximity to homes and the school have devastated people's lives. No rational person could consider it acceptable to build such massive industrial buildings so close to family housing. We want clarity on what will replace them. We are not opposed to development of the land but we are opposed to 18.3 metre high 24 hour industrial units being built in our back gardens.

Planning permission was granted on 11 June 2024. We now know there was a six week window for a judicial review. Only 99 consultation letters were issued and several were sent to businesses rather than residents. Many of us myself included were told we had received a letter but never did. The only public notices were a small announcement in the Leigh Journal which many households do not receive and two A4 notices on lampposts. For a development of this scale that cannot be described as meaningful consultation.

In September 2015 Barton Willmore, one of the UK's leading planning and design consultancies, carried out an assessment on behalf of Peel Investments and stated:

"There is no demand for the type of large units originally proposed for the site because of its location away from the key M6 Corridor, the congestion which exists on the A580, and its close relationship with adjacent residential areas."

A decade later congestion on the A580 has worsened, traffic pressures have intensified, and several hundred new houses have been built in the area which were not present in 2015, further increasing congestion. Yet large scale warehouse developments have now been approved on the same site. If Barton Willmore's professional assessment deemed the location unviable and unsuitable in 2015 what has materially changed in the intervening years to justify these proposals?

Many residents on the Rowlands, Redrow, and Eccleston estates bought their homes through the Help to Buy: Equity Loan and Shared Ownership schemes which are UK Government initiatives administered by Homes England. These schemes were intended to help families invest in long term homes within stable residential communities. The construction of 18.3 metre high warehouses directly behind these estates has severely reduced property values leaving some residents at risk of negative equity. Many are now struggling to sell their homes with sales falling through or potential buyers deterred by the prospect of living with large industrial buildings dominating their back gardens. This outcome undermines the purpose of the schemes and raises serious concerns about planning transparency and consideration for existing homeowners.

The construction disruption has been horrendous. Although the contractor claims to be part of the Considerate Constructors Scheme, behaviour on site shows otherwise. Noise levels are extreme, work has taken place outside agreed hours, radios are constantly blaring, and there have even been confrontations with residents. At the start of construction workers drew water from the local mains leaving homes with little or no water pressure.

We keep being told that the Council is "monitoring the site" and is satisfied that work complies with planning permission. With respect that is not what residents see. I have worked in construction for 30 years and raised concerns with the site manager [redacted] in May before the steelwork went up that the bunds were not the correct height. The approved plans show they should be three to four metres high; they are currently just under two. The height directly affects both visual impact and noise mitigation. The Tetra Tech noise assessment specifies this clearly. Planting a few shrubs does not achieve the same result.

I therefore request proof, actual measured data, showing that the bunds meet the approved design. If the Council is satisfied please share the evidence and measurements. Without that we cannot accept that proper monitoring has taken place.

When the site first began operating around January or February one of the first works completed was a new footpath running behind my property. Shortly afterwards there was a break in, someone drove a vehicle down that new path to access the site and steal materials. The following Monday I visited the site office to inform the manager [redacted] and suggested they check for missing tools and strengthen the fencing. During our chat I asked what was being built as I had never received a consultation letter. His reply was "Don't worry, you will only see the roof of these warehouses from your bedroom window."

That was completely untrue. From my garden patio I can see the entire warehouses including the main entrance. Multiple residents have asked [redacted] what will be planted on the bunds; he gives different answers each time, "trees", "wildflowers", and so on. It is clear he has not checked the plans. The soil being used also does not meet the specification of 600 mm subsoil plus 300 mm topsoil. It appears to be dumped material from May. Yet we are told the Council is satisfied with progress which cannot be correct.

You mentioned that residents have been given information on how to report breaches. I have not received any such guidance and have had to chase everything myself. I have contacted Andy Burnham, [redacted] the site manager, local councillors, Michael Wheeler MP, PLP the architects who did not respond, Tetra Tech who carried out the noise assessment, Tanro, your good self, BCA the landscaping contractors responsible for planting on the bunds who could not provide any information about what they were planting, Greater Manchester Fire and Rescue who initially did not even know the site existed when I contacted them in July, Socotec the building inspectors who provided very little help, Wigan Building Control and the Building Safety Regulator. Despite reaching out to so many parties I have received very little meaningful response or action.

Regarding Garrett Hall Primary School the Council should actively visit and speak with the Headteacher rather than leaving it to her to make contact. The school sits beside the site and the children face the same noise and disturbance as nearby residents. It is inconceivable that she would not wish to discuss the issue unless constrained by her employment with the Council.

Although the Planning Committee decision was made in a public meeting most affected residents did not know it was taking place. The consultation process failed to engage the community. Of the roughly 50 to 55 thousand words submitted in objection residents' views were reduced to a few bullet points. That is not a fair reflection of public sentiment. Consultation may not be a referendum but when the impact is literally in our back gardens proper effort should have been made to inform and involve us.

We are calling for an independent review because residents have no confidence that internal discussions with the same officers who approved the scheme, namely David Proctor and Aidan Thatcher, will produce a fair outcome. An independent review would bring transparency, accountability, and reassurance that the process has been properly scrutinised.

I also invite you personally to visit the site and walk along the residential boundaries on the Rowland, Eccleston, Withington, and Tanhouse estates. Please do not just tour the industrial side. Come and see what residents live with daily.

When Aidan and David met with us they gave us 45 minutes of their time. While we appreciated the meeting one question stood out: why did residents have to form a group and organise a meeting rather than the Council engaging proactively before work began? Had there been an open meeting in a community hall residents could have understood the plans and acted within the six week judicial review period. Instead by the time most of us learned of the plans it was too late.

Our position remains clear: these warehouses are completely out of scale with their surroundings and have had an unacceptable impact on our community. We are asking for the warehouses to be removed and for future projects to not be allowed to operate 24 hours a day seven days a week.

Thank you for taking the time to read this response. The residents' group would welcome a meeting with you directly or your visit to the site to see first hand the scale and impact of this development. We hope the Council will now take meaningful steps to review the situation and work toward a fair and just resolution.

Kind regards

[redacted]

On behalf of the Astley Residents' Action Group

On 17 Oct 2025, at 15:46, Mckenzie-Folan, Alison <A.Mckenzie-Folan@wigan.gov.uk> wrote:

Dear [redacted]

Thank you for emailing me regarding the warehousing development in Astley. I understand the level of interest that this development has prompted, and I am sorry that I have not had the opportunity to reply until now. I have read the emails that you sent as well as a number of the enquiries submitted by other people, and I have also spoken with Aidan and David following their meeting with the residents' steering group.

I understand that the group have submitted a list of questions for the Council to answer, and I hope that you will find the answers useful when this has been done. I also pick up some key points from your email below.

Before turning to these points however, I did want to seek clarification as to the outcome that the group is asking for. Planning permission was granted for the development last summer and was not challenged legally at that time, so as far as I am aware the group are not asking for it to be revoked at this stage. If my understanding on this point is correct, then I would be grateful if the group could set out what it wants to achieve, as that will help the Council to respond with appropriate information and advice going forward.

I am sorry to hear about the disruption that residents are experiencing while the development is under construction. Regrettably a degree of disruption can never be completely avoided, however it is important that the developer is held accountable for complying with the conditions on their planning permission. The Council has been proactively monitoring the development and has liaised closely with the site manager to ensure that the conditions are being complied with. The site is still under construction as you know, but I can confirm that at this stage we are satisfied that the development, including the bunds, is being built in accordance with the planning permission. We have provided residents with details of how to report any breaches, and my team have also (via ward Councillors) offered a discussion to the head of Garrett Hall Primary School – this offer has not been taken up to date but remains open.

Turning to the decision to grant planning permission, this was taken by the Council's Planning Committee made up of elected Councillors, in a meeting that was open to (and attended by) the public. The issues that had been raised through consultation on the application were reported to Committee, who had the opportunity to ask questions of officers before debating the proposal and voting on a decision. The Committee operates on a quasi-judicial basis and is tasked to consider whether planning applications conform to the Council's adopted policies; if they do then the default position set out in national policy is that applications should be approved. The role of public consultation in this process is to identify areas where particular attention needs to be paid to whether a proposal complies with policy; it is not a referendum, although the number of comments on a particular topic is relevant and forms part of officers' reports to Committee. I entirely respect the fact that you disagree with the decision and the steps that the Council took in consulting on the application, however in line with my earlier comments I would welcome the group's view on what it would like an independent review to achieve, so that we can determine next steps.

In relation to engagement and communication with the group, I am aware that Aidan and David met them and have committed to responding to a list of questions that the group would collate. This is an important next step and I have asked to be kept informed on progress and the key points that emerge.

Thank you again for taking the time to write to me. I hope you will find this useful in understanding how the Council is responding to the concerns being raised, while also being open and honest about where we are in the process given Committee's decision

last summer. Our specific next steps will be informed by the questions that the group wants to ask, as well as the confirmation of the outcomes it is seeking, so I look forward to my team receiving both of those in the near future.

Kind regards

Alison

Subject: Follow-up: Request for Acknowledgment and Independent Review of Astley Parkway Development

Dear Alison Mackenzie Folen, OBE,

I hope you are well. I am writing again to follow up on my previous emails regarding the B8 warehouses on Astley Parkway. I completely understand that you may not have had the opportunity to respond yet, but I would be very grateful if you could at least confirm that my messages have been received.

As residents of the Astley Action Group, we continue to be deeply concerned about the way this development has been handled. In our recent Teams meeting with Aidan Thatcher, David Proctor, and several councillors, residents were told we had only 45 minutes to discuss this issue of major importance. Although the meeting slightly overran, 25 minutes were taken up by a slideshow one that we had previously requested not to be shown because we knew time would be limited. As a result, we were left with very little opportunity to ask even a fraction of the hundreds of questions gathered from residents.

The lack of meaningful communication and consultation from the council and the planning department has only deepened the community's frustration. For a development of this magnitude classified as a major planning application, it is astonishing that only 99 letters were sent out and a few A4 notices were placed on lampposts. That cannot be considered proper public engagement. Surely a development of this scale should have involved a public meeting, perhaps in a local community hall or church, where residents could ask questions and express their concerns directly.

When a planning application receives over 90 objections, this should trigger a deeper review, not simply be noted and set aside. What was the purpose of asking for residents' feedback if those objections were effectively ignored? Why was it left to volunteers like us to form an Action Group and act as the go between for the entire community? We are ordinary residents trying to represent our neighbours, yet the responsibility for engagement and transparency should rest squarely with the council.

Adding to this, we are still being asked to direct our concerns to Aidan Thatcher and David Proctor the very individuals most closely involved in the planning process. This cannot produce the independent or transparent answers that residents deserve. It feels as though we are being asked to seek accountability from those who have the most to defend.

For all these reasons, we are calling for a fully independent review of the planning process, the communication with residents, and the decision to allow warehouses of this scale to be built so close to family homes.

Please could you acknowledge receipt of this email and advise whether such an independent review can be commissioned.

With best regards,

> The B8 warehouses currently under construction on Astley Parkway have taken residents completely by surprise. While the land was allocated for development, few of us anticipated the scale of what is being built, leaving residents with far more questions than answers.

The rapid construction, combined with weeks of choking dust over the school summer holidays when children should have been able to play safely outdoors, this has caused significant distress. Alongside the loss of natural light, property values have been adversely affected. Despite raising our concerns, residents feel largely ignored.

We are particularly alarmed by the lack of respect shown by the builders. Dust suppression has been ineffective, and heavy machinery has routinely operated far outside the permitted hours of 9:00 a.m. to 3:30 p.m., running from 7:00 a.m. until 6:00 p.m., as our video evidence confirms. Builders have also tapped into the water supply, leaving residents without access in the mornings and preventing children from completing basic routines such as brushing their teeth before school. In some cases, verbal exchanges between builders and residents have increased stress and tension in the community.

The bunding around the warehouses does not align with the original plans. These bunds were intended to reduce noise and mitigate the visual impact on gardens and the estate. Without them, residents face unacceptable noise levels and a lasting negative effect on the character of the neighbourhood.

Safety is a further serious concern. The warehouses are constructed extremely close to residents' homes and just 30 metres from the school playground. In the event of a fire, particularly at night, the lack of adequate space for emergency services could have catastrophic consequences. Construction noise is also negatively affecting children's learning and well-being.

This development has attracted significant public attention, including coverage on television, in newspapers, and on the radio. The Astley Residence Action Group maintains a Facebook page with over 2,000 members, with posts reaching millions online. The whole country is watching, as B8 warehouses have never before been built so close to residential homes.

We also wish to flag serious concerns about the planning process itself. Some plans submitted to councillors appear inconsistent, and Councillor Stuart Gerrard requested a stop notice due to these concerns.

As Chief Executive, you are ultimately responsible for ensuring planning processes are robust, transparent, and enforceable. In light of the issues outlined above, we respectfully request an immediate independent review of the planning process and any enforcement failures. We also ask that the planning team increase support and meaningful communication with the community, rather than relying solely on public statements about landscaping.

This Thursday, the Astley Residence Action Group will be meeting via Zoom with David Proctor to discuss these concerns further. We would greatly value your insight and support and hope to keep you informed of the discussion and any outcomes. Your leadership is crucial to ensuring that the concerns of local residents are taken seriously and acted upon.

With best regards,

Hi both,

I think we'll need to hold off responding to this until we know what the external stakeholder support is going to look like, and how messages are going to be landed with the residents going forward. At present the fundamental ask here is for the permission to be revoked and the warehouses taken down.

Happy to discuss.

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Subject: Response from Residents' Group Regarding the Astley Warehousing Development

Dear Alison McKenzie Folan OBE

Thank you for your letter regarding the Astley warehousing development. I have read it carefully and to make my response as clear as possible I have addressed the key points you raised. I apologise for the length of this email but every point is relevant to understanding the full context and concerns of residents.

The residents' group wants a fair outcome. These warehouses are far too large and should never have been approved in this location. Their sheer scale and proximity to homes and the school have devastated people's lives. No rational person could consider it acceptable to build such massive industrial buildings so close to family housing. We want clarity on what will replace them. We are not opposed to development of the land but we are opposed to 18.3 metre high 24 hour industrial units being built in our back gardens.

Planning permission was granted on 11 June 2024. We now know there was a six week window for a judicial review. Only 99 consultation letters were issued and several were sent to businesses rather than residents. Many of us myself included were told we had received a letter but never did. The only public notices were a small announcement in the Leigh Journal which many households do not receive and two A4 notices on lampposts. For a development of this scale that cannot be described as meaningful consultation.

In September 2015 Barton Willmore, one of the UK's leading planning and design consultancies, carried out an assessment on behalf of Peel Investments and stated:

“There is no demand for the type of large units originally proposed for the site because of its location away from the key M6 Corridor, the congestion which exists on the A580, and its close relationship with adjacent residential areas.”

A decade later congestion on the A580 has worsened, traffic pressures have intensified, and several hundred new houses have been built in the area which were not present in 2015, further increasing congestion. Yet large scale warehouse developments have now been approved on the same site. If Barton Willmore’s professional assessment deemed the location unviable and unsuitable in 2015 what has materially changed in the intervening years to justify these proposals?

Many residents on the Rowlands, Redrow, and Eccleston estates bought their homes through the Help to Buy: Equity Loan and Shared Ownership schemes which are UK Government initiatives administered by Homes England. These schemes were intended to help families invest in long term homes within stable residential communities. The construction of 18.3 metre high warehouses directly behind these estates has severely reduced property values leaving some residents at risk of negative equity. Many are now struggling to sell their homes with sales falling through or potential buyers deterred by the prospect of living with large industrial buildings dominating their back gardens. This outcome undermines the purpose of the schemes and raises serious concerns about planning transparency and consideration for existing homeowners.

The construction disruption has been horrendous. Although the contractor claims to be part of the Considerate Constructors Scheme, behaviour on site shows otherwise. Noise levels are extreme, work has taken place outside agreed hours, radios are constantly blaring, and there have even been confrontations with residents. At the start of construction workers drew water from the local mains leaving homes with little or no water pressure.

We keep being told that the Council is “monitoring the site” and is satisfied that work complies with planning permission. With respect that is not what residents see. I have worked in construction for 30 years and raised concerns with the site manager [redacted] in May before the steelwork went up that the bunds were not the correct height. The approved plans show they should be three to four metres high; they are currently just under two. The height directly affects both visual impact and noise mitigation. The Tetra Tech noise assessment specifies this clearly. Planting a few shrubs does not achieve the same result.

I therefore request proof, actual measured data, showing that the bunds meet the approved design. If the Council is satisfied please share the evidence and measurements. Without that we cannot accept that proper monitoring has taken place.

When the site first began operating around January or February one of the first works completed was a new footpath running behind my property. Shortly afterwards there was a break in, someone drove a vehicle down that new path to access the site and steal materials. The following Monday I visited the site office to inform the manager [redacted] and suggested they check for missing tools and strengthen the fencing. During our chat I asked what was being built as I had never received a consultation letter. His reply was “Don’t worry, you will only see the roof of these warehouses from your bedroom window.”

That was completely untrue. From my garden patio I can see the entire warehouses including the main entrance. Multiple residents have asked [redacted] what will be planted on the bunds; he gives different answers each time, “trees”, “wildflowers”, and so on. It is clear he has not checked the plans. The soil being used also does not meet the specification of 600 mm subsoil plus 300 mm

topsoil. It appears to be dumped material from May. Yet we are told the Council is satisfied with progress which cannot be correct.

You mentioned that residents have been given information on how to report breaches. I have not received any such guidance and have had to chase everything myself. I have contacted Andy Burnham, [redacted] the site manager, local councillors, Michael Wheeler MP, PLP the architects who did not respond, Tetra Tech who carried out the noise assessment, Tanro, your good self, BCA the landscaping contractors responsible for planting on the bunds who could not provide any information about what they were planting, Greater Manchester Fire and Rescue who initially did not even know the site existed when I contacted them in July, Socotec the building inspectors who provided very little help, Wigan Building Control and the Building Safety Regulator. Despite reaching out to so many parties I have received very little meaningful response or action.

Regarding Garrett Hall Primary School the Council should actively visit and speak with the Headteacher rather than leaving it to her to make contact. The school sits beside the site and the children face the same noise and disturbance as nearby residents. It is inconceivable that she would not wish to discuss the issue unless constrained by her employment with the Council.

Although the Planning Committee decision was made in a public meeting most affected residents did not know it was taking place. The consultation process failed to engage the community. Of the roughly 50 to 55 thousand words submitted in objection residents' views were reduced to a few bullet points. That is not a fair reflection of public sentiment. Consultation may not be a referendum but when the impact is literally in our back gardens proper effort should have been made to inform and involve us.

We are calling for an independent review because residents have no confidence that internal discussions with the same officers who approved the scheme, namely David Proctor and Aidan Thatcher, will produce a fair outcome. An independent review would bring transparency, accountability, and reassurance that the process has been properly scrutinised.

I also invite you personally to visit the site and walk along the residential boundaries on the Rowland, Eccleston, Withington, and Tanhouse estates. Please do not just tour the industrial side. Come and see what residents live with daily.

When Aidan and David met with us they gave us 45 minutes of their time. While we appreciated the meeting one question stood out: why did residents have to form a group and organise a meeting rather than the Council engaging proactively before work began? Had there been an open meeting in a community hall residents could have understood the plans and acted within the six week judicial review period. Instead by the time most of us learned of the plans it was too late.

Our position remains clear: these warehouses are completely out of scale with their surroundings and have had an unacceptable impact on our community. We are asking for the warehouses to be removed and for future projects to not be allowed to operate 24 hours a day seven days a week.

Thank you for taking the time to read this response. The residents' group would welcome a meeting with you directly or your visit to the site to see first hand the scale and impact of this development. We hope the Council will now take meaningful steps to review the situation and work toward a fair and just resolution.

Kind regards

[redacted]

Dear [redacted]

Thank you for emailing me regarding the warehousing development in Astley. I understand the level of interest that this development has prompted, and I am sorry that I have not had the opportunity to reply until now. I have read the emails that you sent as well as a number of the enquiries submitted by other people, and I have also spoken with Aidan and David following their meeting with the residents' steering group.

I understand that the group have submitted a list of questions for the Council to answer, and I hope that you will find the answers useful when this has been done. I also pick up some key points from your email below.

Before turning to these points however, I did want to seek clarification as to the outcome that the group is asking for. Planning permission was granted for the development last summer and was not challenged legally at that time, so as far as I am aware the group are not asking for it to be revoked at this stage. If my understanding on this point is correct, then I would be grateful if the group could set out what it wants to achieve, as that will help the Council to respond with appropriate information and advice going forward.

I am sorry to hear about the disruption that residents are experiencing while the development is under construction. Regrettably a degree of disruption can never be completely avoided, however it is important that the developer is held accountable for complying with the conditions on their planning permission. The Council has been proactively monitoring the development and has liaised closely with the site manager to ensure that the conditions are being complied with. The site is still under construction as you know, but I can confirm that at this stage we are satisfied that the development, including the bunds, is being built in accordance with the planning permission. We have provided residents with details of how to report any breaches, and my team have also (via ward Councillors) offered a discussion to the head of Garrett Hall Primary School – this offer has not been taken up to date but remains open.

Turning to the decision to grant planning permission, this was taken by the Council's Planning Committee made up of elected Councillors, in a meeting that was open to (and attended by) the public. The issues that had been raised through consultation on the application were reported to Committee, who had the opportunity to ask questions of officers before debating the proposal and voting on a decision. The Committee operates on a quasi-judicial basis and is tasked to consider whether planning applications conform to the Council's adopted policies; if they do then the default position set out in national policy is that applications should be approved. The role of public consultation in this process is to identify areas where particular attention needs to be paid to whether a proposal complies with policy; it is not a referendum, although the number of comments on a particular topic is relevant and forms part of officers' reports to Committee. I entirely respect the fact that you disagree with the decision and the steps that the Council took in consulting on the application, however in line with my earlier comments I would welcome the group's view on what it would like an independent review to achieve, so that we can determine next steps.

In relation to engagement and communication with the group, I am aware that Aidan and David met them and have committed to responding to a list of questions that the group would collate. This is an important next step and I have asked to be kept informed on progress and the key points that emerge.

Thank you again for taking the time to write to me. I hope you will find this useful in understanding how the Council is responding to the concerns being raised, while also being open and honest about where we are in the process given Committee's decision last summer. Our specific next steps will be informed by the questions that the group wants to ask, as well as the confirmation of the outcomes it is seeking, so I look forward to my team receiving both of those in the near future.

Kind regards

Alison

Subject: Follow-up: Request for Acknowledgment and Independent Review of Astley Parkway Development

Dear Alison Mackenzie Folen, OBE,

I hope you are well. I am writing again to follow up on my previous emails regarding the B8 warehouses on Astley Parkway. I completely understand that you may not have had the opportunity to respond yet, but I would be very grateful if you could at least confirm that my messages have been received.

As residents of the Astley Action Group, we continue to be deeply concerned about the way this development has been handled. In our recent Teams meeting with Aidan Thatcher, David Proctor, and several councillors, residents were told we had only 45 minutes to discuss this issue of major importance. Although the meeting slightly overran, 25 minutes were taken up by a slideshow one that we had previously requested not to be shown because we knew time would

be limited. As a result, we were left with very little opportunity to ask even a fraction of the hundreds of questions gathered from residents.

The lack of meaningful communication and consultation from the council and the planning department has only deepened the community's frustration. For a development of this magnitude classified as a major planning application, it is astonishing that only 99 letters were sent out and a few A4 notices were placed on lampposts. That cannot be considered proper public engagement. Surely a development of this scale should have involved a public meeting, perhaps in a local community hall or church, where residents could ask questions and express their concerns directly.

When a planning application receives over 90 objections, this should trigger a deeper review, not simply be noted and set aside. What was the purpose of asking for residents' feedback if those objections were effectively ignored? Why was it left to volunteers like us to form an Action Group and act as the go between for the entire community? We are ordinary residents trying to represent our neighbours, yet the responsibility for engagement and transparency should rest squarely with the council.

Adding to this, we are still being asked to direct our concerns to Aidan Thatcher and David Proctor the very individuals most closely involved in the planning process. This cannot produce the independent or transparent answers that residents deserve. It feels as though we are being asked to seek accountability from those who have the most to defend.

For all these reasons, we are calling for a fully independent review of the planning process, the communication with residents, and the decision to allow warehouses of this scale to be built so close to family homes.

Please could you acknowledge receipt of this email and advise whether such an independent review can be commissioned.

With best regards,

[redacted]

Astley Action Group

Dear Allison Mackenzie Folen, OBE,

I am following up on my previous email regarding the B8 warehouses on Astley Parkway. We have not yet received a response, and the community remains deeply concerned about the ongoing impact of this development.

We would greatly appreciate it if you could let us know when we might expect a response. Our goal is simply to work with you and the planning team to find a way forward, as the current development is not acceptable to residents. We hope to come to some arrangement that addresses these serious concerns.

Thank you for your attention, and we look forward to your reply.

With best regards,

> Dear Allison Mackenzie Folen, OBE,
>
> The B8 warehouses currently under construction on Astley Parkway have taken residents completely by surprise. While the land was allocated for development, few of us

anticipated the scale of what is being built, leaving residents with far more questions than answers.

The rapid construction, combined with weeks of choking dust over the school summer holidays when children should have been able to play safely outdoors, this has caused significant distress. Alongside the loss of natural light, property values have been adversely affected. Despite raising our concerns, residents feel largely ignored.

We are particularly alarmed by the lack of respect shown by the builders. Dust suppression has been ineffective, and heavy machinery has routinely operated far outside the permitted hours of 9:00 a.m. to 3:30 p.m., running from 7:00 a.m. until 6:00 p.m., as our video evidence confirms. Builders have also tapped into the water supply, leaving residents without access in the mornings and preventing children from completing basic routines such as brushing their teeth before school. In some cases, verbal exchanges between builders and residents have increased stress and tension in the community.

The bunding around the warehouses does not align with the original plans. These bunds were intended to reduce noise and mitigate the visual impact on gardens and the estate. Without them, residents face unacceptable noise levels and a lasting negative effect on the character of the neighbourhood.

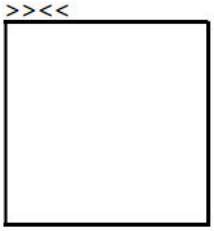
Safety is a further serious concern. The warehouses are constructed extremely close to residents' homes and just 30 metres from the school playground. In the event of a fire, particularly at night, the lack of adequate space for emergency services could have catastrophic consequences. Construction

noise is also negatively affecting children's learning and well-being.

This development has attracted significant public attention, including coverage on television, in newspapers, and on the radio. The Astley Residence Action Group maintains a Facebook page with over 2,000 members, with posts reaching millions online. The whole country is watching, as B8 warehouses have never before been built so close to residential homes.

We also wish to flag serious concerns about the planning process itself. Some plans submitted to councillors appear inconsistent, and Councillor Stuart Gerrard requested a stop notice due to these concerns.

As Chief Executive, you are ultimately responsible for ensuring planning processes are robust, transparent, and enforceable. In light of the issues outlined above, we respectfully request an immediate independent review of the planning process and any enforcement failures. We also ask that the planning team increase support and meaningful communication with the community, rather than relying solely on public statements about landscaping.



This Thursday, the Astley Residence Action Group will be meeting via Zoom with David Proctor to discuss these concerns further. We would greatly value your insight and support and hope to keep you informed of the discussion and any outcomes. Your leadership is crucial to ensuring that the concerns of local residents are taken seriously and acted upon.

With best regards,

Hi David,

The head of marketing and PR at PLP is [redacted].

You will probably already have established that PLP have not made any public comment regarding the current media interest as we have made the decision to continue to focus on delivering the scheme in line with the planning consent and any specific site enquires have been dealt with through TanRo our main contractor who we believe are doing a good job in the circumstances.

Whilst I would of course be happy to catch up I think it is useful to understand our position on this in advance.

I could do 10 am on Friday on Teams if this works.

Thanks,

Subject: Astley Coverage

Hello,

Here is the written article: Wigan warehouse development 'soul-destroying' for locals - BBC News

It was also on BBC NW over the weekend. The news coverage says that the plans were 'amended' which I don't think is accurate? But whether it's worth getting into a discussion about the intricacies of this one at this point. PLP didn't comment. They took the first part of your comment out which refers to the consultation which is frustrating.

We have had another enquiry from a news agency:

Good morning, I'm a reporter at SWNS and have been speaking to residents in Tyldesley, Wigan, about concerns they have regarding the warehouse development being constructed by PLP behind the Henford Estate. For context, the BBC published this report on Friday - https://www.bbc.co.uk/news/articles/c0r7lqjg4y4o Residents have raised concerns about the scale and impact of the development. Some have said that the industrial units are larger than the original plans, with many able to see the building work from their back gardens. They have commented on the visual impact of the site, which they said is affecting their enjoyment of outdoor spaces. It has also been said that noise, dust, and the expectation of hundreds of lorries have created distress. Some have reported difficulties selling their properties and feel the development has negatively impacted their long term plans. There were also concerns about insufficient consultation prior to approval, with residents feeling surprised by the scale of the final plans. We are putting together a report based on residents' concerns and would welcome a comment from Wigan Council addressing this issue. If possible, please send this to[redacted]@swns.com. Kind regards [redacted]

Are you happy if we send the same statement, unless there is anything additional to add:

Aidan Thatcher, director for place at Wigan Council, said: “This planning application went through our planning consultation and committee process.
“The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
“We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly.”
Ends

Thanks,

Subject: RE: Astley Warehouses - Chaddock Lane

Dear [redacted],

Visits and actions have been undertaken as follows:

- 15/05/2025 – To check compliance with Construction Environmental Management Plan (CEMP) in relation to complaints about dust during period of very dry weather

- 29/05/2025 - Follow up visit to check compliance with CEMP again to ensure the site manager was continuing to adhere to its requirements

- 25/07/2025 – To check height of the frames of the larger units (Units 1 and 2). Laser equipment used to confirm max building height of 18.3m in accordance with planning permission.

- 11/09/2025 – walked around all of site, including site boundaries to check landscaping bund which was largely complete at this point. Checked general siting of the buildings, checked the spread of materials/dust on site, checked complaints log held on site by site manager (CEMP requirement). Discussed the planting of the bund and agreed a start on this in November '25.

- 30/09/2025 (with Environmental Protection air quality specialist present) – to check compliance with the CEMP and get input on whether there were any other measures that the contractor should have in place. Content that they were complying with their CEMP and had extra mitigation measures in place that weren't required by the CEMP. No areas witnessed on site which could lead to the wider dispersal of materials.

I trust this assists. We have received a Freedom of Information request on this topic as well and will be responding with the same information.

Dear Aidan and David

Further to the Teams meeting last week with the Astley Warehouses Action Group, and the response which Michael received from David last week, there are still a couple of outstanding pieces of information which we are waiting for.

In his letter to Councillor Molyneux, Michael asked for proactive enforcement action to be taken to address the concerns being raised by residents about the site. In your presentation to the group last week, you mentioned that you and other members of your team had visited the site on several occasions over the past couple of weeks. Please can we ask for reports on the actions you have taken, the inspections you have carried out and any proactive enforcement taking place.

Michael is happy to share this information with the residents to ensure that they have up to date and accurate information about the development and operation of the site.

Kind regards

Dear David and Aidan

Thank you for coming back with information on the enforcement visits. Michael has asked if you can provide further clarification on the following:

- More detailed information on your findings in the most recent enforcement visits and particularly the methods used to assess compliance with the Construction Environmental Management Plan
- Precise information on where the bunding work is complete, including confirmation of the height of the bund which is in place
- Confirmation of where the bunding is not complete, and an agreed date of when it will be completed by
- Precise information on the planting - what kind of planting will take place e.g. will it be a mixture of saplings and mature trees, a mixture of evergreen trees and other kinds of trees, and what height will the trees be
- Following reports of children developing asthma since the site began construction, please can you confirm whether air quality meters can be installed to measure the impact of the build on air quality in the area

Michael would find it very useful to walk the perimeter of the site with you and discuss the issues. Please can you provide some dates of when this can be arranged. Thursdays or Fridays are better for Michael due to the requirement for him to be in Westminster earlier in the week.

Kind regards

Cc: Thatcher, Aidan; Jones, [redacted]); [redacted]; [redacted] n
Subject: RE: Astley Warehouses

Hi David

[redacted] and I visited the site this morning and met with [redacted], site manager. Here is a summary of our findings:

No particular high risk dust sources of concern at this point in construction. The earth mounds around the boundary are mostly compact and vegetated. One mound that is currently being added to will be compacted with priority after our suggestion (this is the section of the bund in the south east corner of the site which has not yet been complete) . This should minimise wind whipping of loose materials on the mound to the adjacent residential. No visual evidence of any dusts settled in the residential areas beyond the boundary, site was well dampened and trackout minimal. Aggregate piles are mostly stones, so not highly dust generating. I did notice one sand aggregate pile near the office that was in use for concrete mixing. I have advised that all fine particulate aggregates and other similar stocks are covered with sheeting. This was agreed.

The site manager produced evidence of daily visual inspections and PM10 monitoring was shown. This is being done three times a day (morning, midday, and afternoon). The Dust Management Plan was also shown to us. All other logs as per the CEMP are being kept and updated. A copy of the IAQM Risk Assessment recommendations (taken from the applicants AQ assessment submitted as part of the planning application) was discussed and this highlighted that, where practical, the stated measures are being undertaken. We discussed that the site has incorporated measures to control AQ and dust beyond and in addition to those in the CEMP – e.g the PM10 monitoring. On this basis, it was advised that the IAQM RA is reviewed and all measures that are being used on site are inserted into the CEMP as a revision of the live document via condition discharge.

We discussed the recent request for extended hours of operation for the specific purpose of power floating operations. The site manager confirmed that the activities would be internal only, carried out by two operatives using a machine which makes a similar sound to a generator. The wagons bringing the concrete on site would arrive during permitted hours (i.e. before 6pm) but the power floating operation would continue until midnight Monday-Friday for a period of 5 weeks, depending on site conditions. The site manager advised that the operators could park outside of the site so that no vehicles would enter or leave during the extended hours. From what we were told this morning, it sounds like the activities would have very little impact on the amenities of local residents and I was satisfied that the site manager had explored all other alternatives but given the nature of the process, none avoid working beyond the permitted hours. My view on this is to invite this amendment to be included in the application to discharge the CEMP again (as outlined above). Does this sound reasonable?

[redacted] and I were satisfied that there are no further measures required to minimise the stated impacts at this time. Furthermore, it was noted that the majority of higher risk works have been completed, and it is more a case of keeping on top of the measures in place, stepping up control measures where applicable, when direct/detailed complaints are received, and being vigilant during the remaining earthworks and concreting. The site manager was asked if they

had received direct complaints on this subject and they confirmed they had but they weren't specific to location/time etc but more of a general complaint. Also, the site manager confirmed that they had received no direct complaints from the local school.

Apologies for the detailed response but I hope this helps in advance of your meeting on Thursday.

Regards,

Hi all,

See the latest below from the residents' group at Astley. Can we pick up with the contractor / site manager please about measures to control dust / wind-borne material leaving the site? We want to be able to provide assurance that the CEMP is being complied with.

Our meeting is Thursday so before that please, let me know if any issues.

Thanks
David

Good morning Christine.
I just wanted to keep you informed of trends developing via the residents complaints of late.
More and more complaints of rat infestation.
Several parents have notified us of breathing problems developing in children. Parent speaking to [redacted] (MEN) re her daughter's recently diagnosed asthma.
Lagging from the site (dangerous if inhaled or touched) being blown onto pathways and into peoples gardens. (TANRO informed)
Thanks again for all your support. We have a Teams meeting with Proctor / Thatcher scheduled for October 2nd.
Regards

Hi David

[redacted] and I are going to try and arrange to go to site on Tuesday to discuss this further with the site manager and to go through the CEMP and make sure all measures are in place.

The CEMP is a live document as you know that has only been partially discharged for reasons such as this. If any additional measures can be included to assist, we could request that these are appended to the CEMP.

Regards,

Morning David

I'm not aware of any contact from the EA regarding this.

Do you know the specific points the residents have raised with the EA? I don't know what, if any, their regulatory remit would be for this site.

Thanks

Hi both,

Please see below the media enquiry we've received from Granada Reports re: the Astley warehouse. We've encouraged them to contact TanRo, but have also drafted the below from a council perspective. Would you be happy with this, or do you have any suggested amends?

A Wigan Council spokesperson said: "Local authority officers - including environmental protection air quality specialists - have been on-site and are in close communication with the developer and their construction partners.
"This is to ensure that all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, both for the development itself and while it is being built.
"We would encourage any residents who are concerned about any aspects of how the site is being delivered to report via our website."

Further information:

- *If residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times, and we will investigate where appropriate.*
- *The construction company has responsibilities to monitor conditions on site and will therefore be better placed to comment on day-to-day issues.*

Many thanks,

[redacted]

Hello,
I work for Granada Reports, the ITV regional news programme in the North West and we're returning to the subject of the Asley Warehouses tomorrow,
We have spoken to a number of residents who tell us they are now suffering with breathing difficulties and asthma since the building work began.
You may be aware that this matter is also being investigated by the Environment Agency.
Can you confirm please if the council is aware of these issues? Do you have anyone available for interview? We'll be back in the area tomorrow and perhaps an officer or councillor would be willing to tour the estate with my reporter and camera - that would be great if possible.
Let me know your thoughts,

We have spoken to a number of residents who tell us they are now suffering with breathing difficulties and asthma since the building work began.
You may be aware that this matter is also being investigated by the Environment Agency.
Can you confirm please if the council is aware of these issues? Do you have anyone available for interview? We'll be back in the area tomorrow and perhaps an officer or councillor would be willing to tour the estate with my reporter and camera - that would be great if possible.
Let me know your thoughts,

Hi both,

Please see below the media enquiry we've received from Granada Reports re: the Astley warehouse. We've encouraged them to contact TanRo, but have also drafted the below from a council perspective. Would you be happy with this, or do you have any suggested amends?

A Wigan Council spokesperson said: "Local authority officers - including environmental protection air quality specialists - have been on-site and are in close communication with the developer and their construction partners.
"This is to ensure that all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, both for the development itself and while it is being built.
"We would encourage any residents who are concerned about any aspects of how the site is being delivered to report via our website."

Further information:

- *If residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times, and we will investigate where appropriate.*
- *The construction company has responsibilities to monitor conditions on site and will therefore be better placed to comment on day-to-day issues.*

Many thanks,

Good morning,

For information, we have had an enquiry from BBC North West regarding the construction of four warehouses in Astley and resident's complaints that they are not reflective of what was agreed in the planning permission:

"Residents say that the plans were changed from low level units to something completely different without them being informed or given an opportunity to oppose them. They're concerned about the impact the size and proximity of the warehouses will have on residents houses, view and livelihoods."

I am agreeing a statement with the Planning team and Aidan, which I will share once finalised but it is a tight deadline as they are planning to cover this on the news this lunchtime and tonight, so I wanted to let you know in advance.

Many thanks,

Are you ok fronting this David? From the below, there won't be residents on the radio at the same time – as I think that could be a difficult process? If they are using pre-recorded clips of residents, then ideally we'd have sight (hearing) of them prior to ensure David knows what he is walking into.

Subject: FW: BBC Radio 4 You & Yours - Please can you confirm this email has been received

Hello,

Please see below for You and Yours on Radio 4- there is quite a long list of questions we've been asked to address.

[redacted] and David spoke yesterday- and agreed that we would put David up for interview- if you're still happy with that David? They are planning to air Wednesday, so please can you let me know a couple of times Monday/Tuesday that would be good for you?

Ahead of that though, I think there are quite a few of the questions we can push back on now which will hopefully help to clarify some issues ahead of the interview.

One thing I'm a bit confused on- he refers to a 2015 application, is that an error on his part?

Start of a suggested response, based on what we've said before below but theere are a few that are probably new questions to us- if there is anything else we can start to respond to today, or anything that came out of yesterday's meeting that we can include?

Happy to hop on a call if that would be easier.

Here is some background context for this site:

- *This land has been allocated as employment land since 2006.*
- *The outline planning application for this site approved the principle of industrial development on this site, which is an extension of Astley Business Park, in 2017.*
- *The outline planning permission did not set final size or layout of the buildings, but we appreciate this planning process may be the cause of some of the confusion.*
- *The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*
- *Ahead of this letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.*
- *We have met with representatives of the residents living nearby, alongside their local councillors and MP, to discuss the development, the point we are now at, and potential options moving forwards.*

ends

Thanks,

[redacted]

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

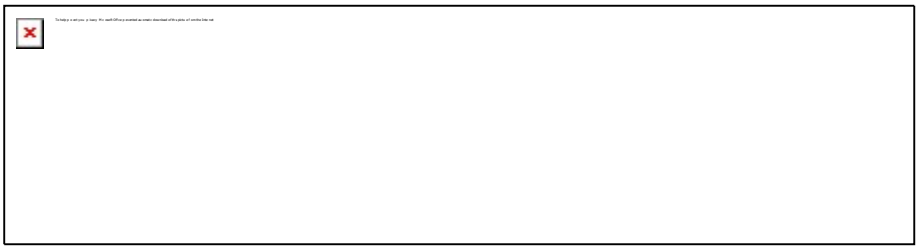
Hi,
Hope this email finds you well.
I'm one of the team that works on BBC Radio 4's You & Yours, a consumer and lifestyle programme. We are working on an item around large warehouses, or mega sheds as they are also known, and plan on that being on air Wednesday 8th of October. The item will feature audio with residents from and around the Henford Estate in Tyldesley, discussing their concerns and issues around the current PLP warehouse development. This will be part of a larger item around warehouse development in the UK.

We would like to invite a spokesperson from Wigan Council on to the programme to discuss the development with us, as well as discussing the concerns of residents.
If there isn't a spokesperson available, could we please get a statement addressing the concerns of residents, as well as addressing the following areas – our deadline is 5pm Tuesday 7th October 2025:

1. When did PLP first submit plans to develop the site and how have they been changed and altered to arrive at the plans that were granted permission by Wigan that are in current development?
2. Overall, how many plans have PLP submitted for permission on the site, been granted by Wigan Council, but lapsed?
3. How were residents informed about all PLP planning applications (regardless of outcome) and methods for them to engage?
4. Was any additional outreach to residents given after the 2015 granted planning permission lapsed, and new plans were submitted?
5. How many complaints were issued against the granted 2015 PLP plans?
6. How many complaints did the current PLP development have?
7. In the process of Wigan Council granting permission for the current plans in development what consideration and process was given to the impact on residents during and after development – mental and physical health, property damage and value, and general disruption to their lives, the environmental impact, impact on education and health of pupils at Garrett Hall Primary School, and loss, and local infrastructure?
8. The residents group Astley Warehouse Action are claiming that the submitted plans by PLP do not show a true representation of the housing in that area – how does Wigan Council respond?

9. Residents have claimed their properties have been damaged by these works - how does Wigan Council respond?
10. Residents are claiming that this has drastically reduced the value of their properties and making them difficult to sell - how does Wigan Council respond?
11. Residents claim that over 100 people complained about the PLP development by Wigan Council have only reported 70 - how does Wigan Council respond?
12. How are Wigan Council currently helping the residents impacted by the PLP development?

I am happy to discuss this over the phone if you wish.



Many thanks,

Thanks,

Just one thing – I know we said we'd take something to Planning Committee this time, but given the profile that this still has and the potential for Cllr G to use it as a platform again in front of the press, I've taken the view that we hold off until we've a clearer strategy. Trust that's OK. Deadline is today; Committee is next week which means I'm not there – [redacted] is happy to cover on the basis that it's business as usual.

From the emails last week it sounds as though we have some external advice being brought in – would be good to understand what that is and what we expect from it.

Thanks
David

Thanks

Unless Alson thinks otherwise, I'm happy for him to be invited – not sure he will be able to attend at that short notice – but I wouldn't want to delay any further to allow for his attendance as I think we just need to get this done.

Dear Mr Proctor.
I am writing to you in relation to a recent invitation I received to attend a Teams meeting on either 22nd or 24th September. Unfortunately both dates are not suitable for some members of the Steering Committee and Michael Wheeler MP, who we would like to attend but is on holiday next week. I have contacted his secretary and requested dates for w/b 29th September. Please note that several members of the Residents Steering Group would like to attend the meeting.
With Regards

Hi David
We were informed that a meeting with the steering group would be arranged for this week but as yet, we have not heard anything.
Also, I have not had an answer to the points I raised after last week's meeting.
Please can you sort these issues as soon as possible.

Best wishes

What were the best bits of the training sessions (and why)?	GREAT TO GET VIEWS FROM OTHER LOCAL AUTHORITIES. AND A CHANCE TO GET MEMBERS TO FOCUS ON COMPLIANCE WITH POLICIES AND NAAE.
What could have been improved to make the events more beneficial for you?	NOTHING
If you had one ask for PAS support over the next year, what would it be?	WIDER COMMUNICATION ON OUTCOMES OF PLANNING CTTE MEETINGS + APPEALS ACCROSS THE COUNTY
How were we at organising the events and communicating with you? Was the venue good?	FIRST CLASS PRE-PLANNING AND DELIVERY
Anything else you'd like PAS to know?	THANK YOU FOR ALL THE INPUT

What were the best bits of the training sessions (and why)?	Role Play Worked Well.
What could have been improved to make the events more beneficial for you?	A Bit More Pacy.
If you had one ask for PAS support over the next year, what would it be?	—
How were we at organising the events and communicating with you? Was the venue good?	Organised Well.
Anything else you'd like PAS to know?	—

What were the best bits of the training sessions (and why)?	Case study
What could have been improved to make the events more beneficial for you?	Nothing
If you had one ask for PAS support over the next year, what would it be?	Nothing
How were we at organising the events and communicating with you? Was the venue good?	Yes
Anything else you'd like PAS to know?	everything fine

What were the best bits of the training sessions (and why)?	CASE STUDY Discussion
What could have been improved to make the events more beneficial for you?	Copy of Presentation before hand on the day
If you had one ask for PAS support over the next year, what would it be?	
How were we at organising the events and communicating with you? Was the venue good?	Yes
Anything else you'd like PAS to know?	

What were the best bits of the training sessions (and why)?	—
What could have been improved to make the events more beneficial for you?	—
If you had one ask for PAS support over the next year, what would it be?	—
How were we at organising the events and communicating with you? Was the venue good?	Good.
Anything else you'd like PAS to know?	—

What were the best bits of the training sessions (and why)?	The Presentation was excellent.
What could have been improved to make the events more beneficial for you?	No improvements necessary
If you had one ask for PAS support over the next year, what would it be?	I will consult the website.
How were we at organising the events and communicating with you? Was the venue good?	Event was well organised. Venue was appropriate to the subject matter.
Anything else you'd like PAS to know?	Not at this stage.

What were the best bits of the training sessions (and why)?	
What could have been improved to make the events more beneficial for you?	
If you had one ask for PAS support over the next year, what would it be?	
How were we at organising the events and communicating with you? Was the venue good?	
Anything else you'd like PAS to know?	

What were the best bits of the training sessions (and why)?	Questions in second part.
What could have been improved to make the events more beneficial for you?	More Wigan specific
If you had one ask for PAS support over the next year, what would it be?	Not sure. Hadn't heard of PAS before today, sorry.
How were we at organising the events and communicating with you? Was the venue good?	
Anything else you'd like PAS to know?	

What were the best bits of the training sessions (and why)?	information Given
What could have been improved to make the events more beneficial for you?	none
If you had one ask for PAS support over the next year, what would it be?	
How were we at organising the events and communicating with you? Was the venue good?	Good
Anything else you'd like PAS to know?	Thank you for all your time

What were the best bits of the training sessions (and why)?	IN DEPTH INFORMATION
What could have been improved to make the events more beneficial for you?	
If you had one ask for PAS support over the next year, what would it be?	
How were we at organising the events and communicating with you? Was the venue good?	I ENJOYED MORE USEFUL INFORMATION
Anything else you'd like PAS to know?	THANKYOU FOR YOUR HELP

What were the best bits of the training sessions (and why)?	Debate following the Inspectorate's decision, which gave us the opportunity to discuss the implications of decision-making (which we don't usually encounter after approving/declining an app).
What could have been improved to make the events more beneficial for you?	Providing the slides beforehand, to give a better idea of the application and to make it more interactive.
If you had one ask for PAS support over the next year, what would it be?	To provide regular guidance on new planning policies to help us as a Committee when making decisions.
How were we at organising the events and communicating with you? Was the venue good?	Yes - no complaints.
Anything else you'd like PAS to know?	No.

Subject: RE: Enquiry: Online meeting between Aiden Thatcher, David Proctor and residents of the Astley Business Park Residents Action Group

Thank you- updated response, as discussed with [redacted]:

On point one, we will not be commenting on this. Here is a statement regarding the application and the wider process:

A Wigan Council spokesperson, said: "This planning application went through our planning consultation and committee process.
"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
"We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly."

On point two and Cllr Eastoe's comments, here are a few points for context:

- *There were two new members of planning committee for 2024.*
- *All new members of the committee are required to undertake mandatory training prior to being able to participate in committee meetings.*
- *At the start of the 24/25 municipal year, existing members of the committee were offered the opportunity to attend a refresher training session.*

Ends

Subject: Re: Enquiry: Tyldesley warehousing development

Hi guys,

Just checking you're both okay with the final statement before it's sent out this afternoon?

A Wigan Council spokesperson, said: "Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built.
"We will be meeting with residents later this week to discuss the development and their concerns."
For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.
- Work is ongoing on the landscaping and construction of the bund.
- We have had no reports of people experiencing breathing difficulties, but if residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times.
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

Thanks [redacted]
Councillors and MP Michael Wheeler (and possibly Andy Burnham) are also at the residents' meeting, but that's an unwieldy list and makes it sound political; I think it reads fine as it is just referring to residents.
On the breathing difficulties one, we don't want people to report breathing difficulties to us per se (surely they'd call 111 etc). What we want reported to us are any specific breaches of planning conditions, via our website. So could we adjust it to something like:

- We have had no reports of people experiencing breathing difficulties, but if residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times. [The page is https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/Enforcement-and-breaches.aspx in case we wanted to give that].

Give me a shout if you need anything else.
Thanks

Subject: Enquiry: Tyldesley warehousing development

Hello,

Please find enquiry below regarding the warehousing development.

I've had a chat to James who I think has spoken to you about this David, here is a first draft of a response:

Aidan Thatcher, director for place at Wigan Council, said: "Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built.

"Alongisde colleagues in our planning team, I will be meeting with representatives of nearby residents *(anyone else at that mtg- cllrs/Peel?)* later this week to discuss the development and their concerns."

For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.
- Work is ongoing on the landscaping and construction of the bund.
- We have had no reports of people experiencing breathing difficulties- we would urge anyone experiencing this to get in touch with us at ***how?***
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

Subject: Tyldesley warehousing development

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi there, I understand that Cllr Stuart Gerrard has emailed Wigan council officers to request that a stop notice be put on the Tyldesley warehousing development as a number of families with young children are experiencing breathing difficulties.
He says: "The scale and size of the scheme are not what was presented in the original planning application, and the required bunds and screening have not been implemented in advance as stipulated."
He wants the work to be halted while the council, developer and residents get round a table to plot the best way forward.
Comment on this by 4pm today, please. If you need more time, please let me know.

Subject: Re: Enquiry: Tyldesley warehousing development

Hi guys,

Just checking you're both okay with the final statement before it's sent out this afternoon?

A Wigan Council spokesperson, said: “Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built.
“We will be meeting with residents later this week to discuss the development and their concerns.”
For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.
- Work is ongoing on the landscaping and construction of the bund.
- We have had no reports of people experiencing breathing difficulties, but if residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times.
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

Councillors and MP Michael Wheeler (and possibly Andy Burnham) are also at the residents' meeting, but that's an unwieldy list and makes it sound political; I think it reads fine as it is just referring to residents.
On the breathing difficulties one, we don't want people to report breathing difficulties to us per se (surely they'd call 111 etc). What we want reported to us are any specific breaches of planning conditions, via our website. So could we adjust it to something like:

- We have had no reports of people experiencing breathing difficulties, but if residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times. [The page is https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/Enforcement-and-breaches.aspx in case we wanted to give that].

Give me a shout if you need anything else.
Thanks
David

Hi there, I understand that Cllr Stuart Gerrard has emailed Wigan council officers to request that a stop notice be put on the Tyldesley warehousing development as a number of families with young children are experiencing breathing difficulties.

He says: "The scale and size of the scheme are not what was presented in the original planning application, and the required bunds and screening have not been implemented in advance as stipulated."

He wants the work to be halted while the council, developer and residents get round a table to plot the best way forward.

Comment on this by 4pm today, please. If you need more time, please let me know.

Thanks very much Aidan,

Apologies for no notice of the meeting, it was organised at the very last minute, late on Thursday/Friday, the Mayor had been deliberating as to what to do for some time. As is common in these situations, we were not present at the meeting.

I will include the extra points you set out below, including amending the extract of the note accordingly (before resending to the Mayor's office), in particular to pick up your point about subsidence, but to reassure you, that has been an identified as an action from the meeting. However, I understand an action may be to contact Peel to request a meeting with the Mayor (and maybe the MP too), to discuss progress on the mitigation. It is unlikely that any officers will be invited and we may not even know it has happened until after the event, but I will say it would be good to be kept in the loop about any further meetings and I will update you if I hear anything.

Thanks again

Subject: RE: Follow up query from the GM Mayor re Astley Warehouses

Thanks [redacted]; copying Aidan and Alison in as I don't think we were aware this meeting was happening until it was referenced by a ward Councillor in a query to me yesterday.

The points in your email below are fine, a couple of extra bits:

- Q1 – we have committed to provide a response to a long list of questions compiled by the residents' group. This will be provided by the end of this week, and Michael Wheeler will be copied in. We'll send a copy to you as well.
- Property subsidence (mentioned in the note to the Mayor) – our position has been that the Council has no remit in relation to this issue and that residents need to raise any concerns through their insurance. The Council wouldn't instruct surveys.
- I'm told there were three sets of comments from GMEU, all on the website. The first provides an overview (dated 7/2/24), and the other two pick up issues identified in the first (dated 14/5/24 & 16/5/24). All three were summarised in our committee report.

Importance: High

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hello David,

I think you and [redacted] were in touch about the warehouses in Astley a few weeks ago and you kindly supplied the attached powerpoint which had been shared with your Members. We have briefed the Mayor and our CX a few times on this subject, most recently last week ahead of a meeting the Mayor had on 20th October (yesterday), with local councillors and Michael Wheeler MP (the body of that briefing note is attached for your information).

Further to that meeting, I have been asked for the following information and I propose to respond as set out under each question but, before I do, I wanted to check with you, if there is anything else I should include/be aware of? One thing it would be helpful for you to confirm is the GMEU reports, these seem to be emails, is that correct, was there nothing else?

I have sent a holding response back to the Mayor's office, to say I'm looking into this, but I will need to respond fully to them in the next day or so, so any comments you have would be appreciated asap, if possible,

1. Michael Wheeler MP would like a note on all available information regarding the warehouses do you have one to hand?
   We do not have such a note, other than the one provided to the Mayor last week. That said, I think the most appropriate document for us to supply in answer to this request is a copy of the officer report which summarises everything thoroughly. But, I have also attached a powerpoint presentation, which I understand was shared with Members and which Wigan officers agreed could be shared with local residents, so this could also be provided? It would also be worth pointing out to the MP that all the documents relating to the application can be found here: Planning Documents
2. Could we request a copy of the consultation process by Wigan Council that took place for the warehouses? The Cllrs do not believe this was followed.
   Wigan consultation process is set out in their Statement of Community Involvement: Statement of Community Involvement (September 2023) and is also governed by planning regulations.
   The consultation dates for this application are set out here: A/23/96226/MAJOR | Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works | Land At Astley Park Way Worsley
   For additional information, details of comments received are available here: A/23/96226/MAJOR | Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works | Land At Astley Park Way Worsley
   I am not aware of any evidence to suggest that the consultation was not carried out properly, no procedural challenge was brought in respect of the permission and as the note to the Mayor explains, that deadline has long since passed.
3. Do we have a copy of the report submitted by the Greater Manchester Ecology Unit? The Cllrs have requested to see it.
   There are two GMEU reports available via this link: Planning Documents (these will have been available to view by all, including planning committee members, before the application was determined at Committee)

Thanks

Subject: RE: Follow up query from the GM Mayor re Astley Warehouses

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hello again

As per my voicemail earlier, I am about to provide the Mayor's office with the information below. However, we received yesterday, sight of claims in relation to the consultation (or lack thereof) on recent amendments to the plans. I am therefore including an additional bullet point explaining this is not within the Mayor's jurisdiction. Instead, if Councillors have procedural issues/concerns with how the planning consultation process has been run, they should raise these with Wigan's Monitoring Officer and/or Chief Planning Officer. This is similar to our advice in relation to their earlier request for the Mayor to undertake a review of Wigan's planning service more generally.

Finally I have been informed that it is very likely that the Mayor will be meeting with the local residents in the next week or so. Again, I am very unlikely to be at that meeting, but if I hear anything more, I will let you know and if and when you are able to share the note being sent to the residents, that would be very helpful, so that I can share it with the Mayor's office. In the meantime, it would be useful to know if one of the questions addresses consultation on the recent amendments to plans.

Thanks

Subject: RE: Follow up query from the GM Mayor re Astley Warehouses

Thanks very much Aidan,

Apologies for no notice of the meeting, it was organised at the very last minute, late on Thursday/Friday, the Mayor had been deliberating as to what to do for some time. As is common in these situations, we were not present at the meeting.

I will include the extra points you set out below, including amending the extract of the note accordingly (before resending to the Mayor's office), in particular to pick up your point about subsidence, but to reassure you, that has been an identified as an action from the meeting. However, I understand an action may be to contact Peel to request a meeting with the Mayor (and maybe the MP too), to discuss progress on the mitigation. It is unlikely that any officers will be invited and we may not even know it has happened until after the event, but I will say it would be good to be kept in the loop about any further meetings and I will update you if I hear anything.

Thanks again

Subject: RE: Follow up query from the GM Mayor re Astley Warehouses

Thanks [redacted]; copying Aidan and Alison in as I don't think we were aware this meeting was happening until it was referenced by a ward Councillor in a query to me yesterday.

The points in your email below are fine, a couple of extra bits:

- Q1 – we have committed to provide a response to a long list of questions compiled by the residents' group. This will be provided by the end of this week, and Michael Wheeler will be copied in. We'll send a copy to you as well.

- Property subsidence (mentioned in the note to the Mayor) – our position has been that the Council has no remit in relation to this issue and that residents need to raise any concerns through their insurance. The Council wouldn't instruct surveys.
- I'm told there were three sets of comments from GMEU, all on the website. The first provides an overview (dated 7/2/24), and the other two pick up issues identified in the first (dated 14/5/24 & 16/5/24). All three were summarised in our committee report.

Importance: High

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hello David,

I think you and [redacted] were in touch about the warehouses in Astley a few weeks ago and you kindly supplied the attached powerpoint which had been shared with your Members. We have briefed the Mayor and our CX a few times on this subject, most recently last week ahead of a meeting the Mayor had on 20th October (yesterday), with local councillors and Michael Wheeler MP (the body of that briefing note is attached for your information).

Further to that meeting, I have been asked for the following information and I propose to respond as set out under each question but, before I do, I wanted to check with you, if there is anything else I should include/be aware of? One thing it would be helpful for you to confirm is the GMEU reports, these seem to be emails, is that correct, was there nothing else?

I have sent a holding response back to the Mayor's office, to say I'm looking into this, but I will need to respond fully to them in the next day or so, so any comments you have would be appreciated asap, if possible,

1. Michael Wheeler MP would like a note on all available information regarding the warehouses do you have one to hand?
   We do not have such a note, other than the one provided to the Mayor last week. That said, I think the most appropriate document for us to supply in answer to this request is a copy of the officer report which summarises everything thoroughly. But, I have also attached a powerpoint presentation, which I understand was shared with Members and which Wigan officers agreed could be shared with local residents, so this could also be provided? It would also be worth pointing out to the MP that all the documents relating to the application can be found here: Planning Documents
2. Could we request a copy of the consultation process by Wigan Council that took place for the warehouses? The Cllrs do not believe this was followed.
   Wigan consultation process is set out in their Statement of Community Involvement: Statement of Community Involvement (September 2023) and is also governed by planning regulations.
   The consultation dates for this application are set out here: A/23/96226/MAJOR | Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works | Land At Astley Park Way Worsley
   For additional information, details of comments received are available here: A/23/96226/MAJOR | Development of warehousing units (Use Class B2/B8) - including ancillary integral office space (Use Class E g), installation of PV panels to each unit, with associated car parking and service yards, internal access roads, diversion of footpaths 014/145/10, 014/152/10, 014/154/10 and 014/159/10 and associated engineering, infrastructure and landscaping works | Land At Astley Park Way Worsley
   I am not aware of any evidence to suggest that the consultation was not carried out properly, no procedural challenge was brought in respect of the permission and as the note to the Mayor explains, that deadline has long since passed.
3. Do we have a copy of the report submitted by the Greater Manchester Ecology Unit? The Cllrs have requested to see it.
   There are two GMEU reports available via this link: Planning Documents (these will have been available to view by all, including planning committee members, before the application was determined at Committee)

Thanks

Subject: GB News: Warehouses

Hello,

Just sharing the GB News enquiry:
I'm just reaching out as am hoping to obtain a comment regarding the Astley Business Park plans/ building work. I know there's been a lot of speculation and coverage both online and in the news, but was just wondering if it might be possible to interview someone from the council about this? Would be looking to do this on Friday afternoon if so! If not, could you please provide a statement responding to the following: - why was planning permission given? - what are you doing to support those residents who say their lives have been affected and are concerned about ever selling their homes?

Are you happy if I send the extended version of our response?
Alison – just confirming this is accurate? I know the report says 70 representations, but if it was 104 from individual people that's what I've used in the below if that's OK.

Aidan Thatcher, director for place at Wigan Council, said: "This planning application went through our planning consultation and committee process.
"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
"We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly."

For context:

- *This land has been allocated as employment land since 2006*
- *The outline planning application for this site approved the principle of industrial development on this site, which is an extension of Astley Business Park, in 2017.*
- *The outline planning permission did not set final size or layout of the buildings, but we appreciate this planning process may be the cause of some of the confusion.*
- *The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*
- *Ahead of this letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100*

individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.

- *The development will create around 500 on-site jobs, and another estimated 460 across Greater Manchester.*

Thanks,

Hi David,

I am well thank you and hope you are too.

Thanks for running this by us and I'm not sure of the answer off the top of my head tbh. So, I've emailed my colleague at Planning Aid England and will revert back when they respond.

Interestingly, I've had quite a few conversations recently about this issue, where opposing residents groups become abusive and aggressive to Planners and it really is something that needs to be addressed. We've been discussing some kind of event to talk about the safety and handling of such situations. If you have any thoughts on this, please do share them with us.

Will come back re Planning Aid support.

Kind regards

Hi [redacted],

Hope you're well.

We're trying to identify organisations or individuals that might be able to mediate / act as an independent interface between the Council and a residents' group, who are vehemently opposed to a development that the Council has granted planning permission for. The development in question is a warehouse development in Astley – you might have seen it in the news:
https://www.bbc.co.uk/news/articles/c0r7lqjg4y4o

We've thought about whether Planning Aid would be a route but this seems a very tall ask for volunteers, so we were wondering if you could suggest anyone who might be able to do this on a more professional footing, or signpost us to any other bodies to ask?

Any pointers would be much appreciated. I'm happy for this email to be forwarded on if you need to seek wider views in the RTPI.

Thanks in advance
David

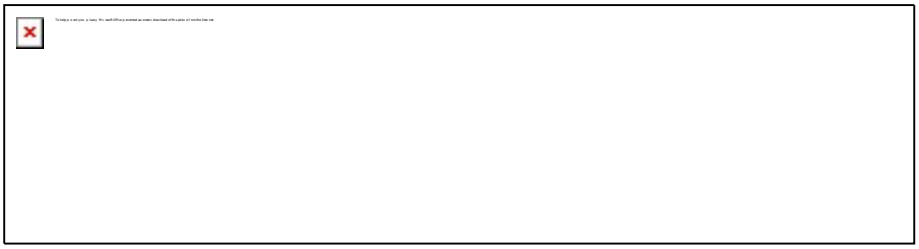
Subject: Planning Committee Formal Complaint

Hi Alison

I write to you to express my concerns regarding the planning committee's conduct and process in relation to a planning application approved in June 2024, which has since attracted local and national media attention.

While I recognise that all legal procedures were followed by the Local Planning Authority and the Planning Officer, I have serious concerns about the functioning of the planning committee itself.



1) Understanding of Application Details During a meeting with the Mayor of Greater Manchester, ward colleagues, and councillors from Astley, it was raised by an Astley councillor that one of the planning committee members did not realise how tall the warehouses were. The councillor suggested that, had they understood the height, they would have objected. My concern is how a committee member could be unaware of the scale of the development when the officer's report and the verbal presentation clearly set out these dimensions. This raises the question of whether the member read the documents provided, and whether there may be complacency in evaluating material facts. Such complacency is a serious issue given the potential impact of the decision.

2) Conduct and Professionalism During Meetings It has been reported that certain members of the committee are not fully attentive during proceedings; some are described as falling asleep, arriving late, or not listening when the committee is in progress. This behaviour is unprofessional and undermines public confidence in the decision-making process. Given these points, I request that the matter be taken seriously and that an internal review be carried out to assess: The level of preparation and engagement of planning committee members with the documentation provided for the application. The overall conduct of committee meetings, including punctuality, attentiveness, and adherence to appropriate procedural standards. Any need for additional training or guidance to ensure robust, transparent, and accountable decision-making.

I appreciate your attention to these concerns and look forward to a formal response detailing any steps planned or taken in response to this inquiry.

Best regards,
Councilor James Fish
Tyldesley and Mosley Common

Subject: FW: PLP development Astley

Hi Aidan and David

Please see email from [redacted] regarding the above development.

Alison responded to [redacted]s original email confirming that a meeting was being arranged. Can you please respond to Charlotte's email requesting further information.

Kind regards

[redacted]

[redacted]
Executive Assistant to Alison Mckenzie-Folan OBE Chief Executive of Wigan Council and Place Lead for Health and Care Integration (Wigan), NHS Greater Manchester Integrated Care

Senior Management Support Team – Strategy and Innovation Directorate Wigan Council Town Hall Library Street

Alison, can you please share when this is?

Cladding and toxic materials (very easily picked up by children) landed in my garden over on the redrow estate. This meant it has had to travel past the local primary school. It’s a matter of time until the council has blood on its hands. Do the right thing please!

Dear Councillor Roberts.
I have been copied into David Proctor's email where he states he's looking at coordinating diaries presumably to arrange a meeting with the residents.
Can you please inform him that after contacting the steering group , which is representative of all affected residents, that we have no intention of attending a meeting at the council offices if that is his intention.
The residents will only be satisfied if he walks around the affected areas and witnesses first hand the full impact and reality on people's houses that this decision has caused. After this we are more than willing to sit and meet at a suitable venue. Garrett Hall School or Holly Family School has been suggested.
Withington regards

Ok. I'll look out for emails about it.
Myself and Joanne Marshall would like to request a meeting too without, asap.

Kind regards,
Councillor Jess Eastoe
(She/her)
Tyldesley & Mosley Common ward

Please note that I have a full time job in addition to my councillor role, so replies maybe slower than expected.

Dear Cllr Eastoe

We have so much going on with this site, due to the national press interest, that we will be able to respond more quickly than that, but its just so there is a record of the request and the response that we'll channel it through the ME system.

Many thanks

Aidan Thatcher

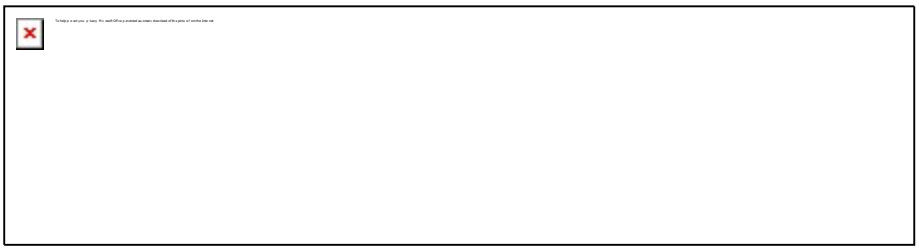
Subject: PLP industrial site

Hi Aidan

I am really concerned about the scale of the industrial site on Astley Business park. I'm concerned the trees won't have the effect you're looking for due to how large and tall the buildings are, and how close they are to some of the houses.
What's most concerning is the damage that's been done to people's houses. When we had the first heatwave the dust was across Tyldesley and Astley.
I also had to ask for vibration equipment for the houses near by - and the council so called went to the site about the two issues.
Amongst the press releases you'll see a few houses have big cracks on their house and flooring has cracked.



What can be done about this?
Are PLP and/or the council going to fix the damaged to houses or offer compensation?

I understand the route of insurances, but surely if this build was an appropriate distance away this wouldn't happen in the first place.
I don't think residents are taken seriously enough within this planning approval - and I'm disappointed in the lack of consultation considering how close it is.
I gather the planning permission on acknowledged its connections to the rest of the business park on Chaddock Lane and failed to make appropriate measures or care about the houses on the other side, just a few feet away.

What is going to be done to mitigate the issues?

Kind regards,
Councillor Jess Eastoe
(She/her)
Tyldesley & Mosley Common ward

Hi David,

We hope you've had a good two weeks since we last heard from you on email.

As today is the deadline you gave yourself to respond to our questions (and let us know a date for site visit meeting), could you please either send over those responses, or let us know what time today you'll be sending them.

Thanks,
Astley Warehouse Action Group

Hello,
Thank you for the email. I am afraid that neither Aidan nor I received the first one sent, so today is the first opportunity we have had to consider the points.
In relation to a site visit on the 15th, I am sorry but diaries do not permit this, and we would like to consider the questions in the first instance as we indicated at the meeting.
We will provide the response no later than Friday 24th October.
Thank you again for getting in touch.

Aidan and David,
Last week (7th October) we sent over the below email with a list of questions, a proposal to meet at the construction site on Wednesday this week and a request that you let us know that you have received the email.
We haven't had a response as yet, so we're checking that the email has been received and is being looked at?
Thanks,

David,

It's disappointing to hear that while others cc'd into the email did receive it, that both yourself and Aidan did not.

We appreciate that you want to take the time to review the questions, but we hope you will prioritise our concerns given the daily impact the warehouses are having on our community and will respond well in advance of the deadline you have added.

Please let us know suitable dates for a meeting at the construction site.

In addition, we note you have updated the CEMP for the construction site, including 'loud radios not to be played', and yet they are still not following them. Please find attached video which shows radios being played by the builders this afternoon, which breaches the latest measures you have put in place.

Thanks,
Astley Warehouse Action Group

Aidan and David,

Last week (7th October) we sent over the below email with a list of questions, a proposal to meet at the construction site on Wednesday this week and a request that you let us know that you have received the email.

We haven't had a response as yet, so we're checking that the email has been received and is being looked at?

Thanks,
Astley Warehouse Action Group

Questions for Wigan Council

• You told residents that you 'followed the process'. Do you accept that following process is not the same as following good practice?
• What lessons have you taken from how this application has affected trust in Wigan Council?
• Can you explain how you have come to the conclusion that you carried out an extensive local community consultation?
• Can you give a concise overview of what has happened on this application, what's outstanding, and what the next 12 months look like, including enforcement and monitoring?

• Who quality-assured and signed off the officer report before it went to committee? Who reviewed it and when. Please provide evidence of what was discussed during those reviews.
• Do you accept that the officer's report under-represented the scale and impact on homes and the school?
• Councillors depend on the officer's report, but public objections made up just 3.5% of that report. The evidence and real-life impact (94 objections on average 500 words long) were sterilised into a few bullet points. Does Wigan Council accept that this distorted the balance of information before the vote or are councillors expected to read 55,000 words of objection on the portal before the hearing in addition to the officers report?
• Were the planning drawings submitted before or after the planning officer attended the site. If the drawings were submitted before the site visit did the planning officer not notice the drawings were incorrect as houses were missing? If the drawings were submitted after the site visit did the planning officer make reference to this with the applicant to rectify the issue?
• Do you accept that housing being missing on planning maps within metres of the warehouse is a critical error?
• Was a video of the site shown to the committee. Did this indicate the height of the structures?

• What timeframe did the committee receive to review the application? How many other applications had to be reviewed in that time?
• You appear to have the view that the development is 'on-balance acceptable'. Why was the clear harm to the community not given enough consideration and what threshold would not have been acceptable?
• Research shows that warehouses of the scale you have approved create far fewer jobs per square metre (often one job per 130–150 m²), compared with smaller industrial units that generate up to five times more employment density. Was this considered when approving the 18 metre structure?
• What volume are the warehouses compared to the volume of those proposed in 2017.

• What negotiations took place between the planning officer and PLP to reduce the height, footprint or orientation of buildings prior to submitting plans to the public to ease the impact on the community? If none, why not?
• You stated there were 'iterations of plans' between public planning submission and the council decision meeting. What changes have improved the outcome for residents?

• Why was the industrial element of the 2017 outline plan allowed to lapse?
• Once the 2017 residential element was dispatched, why was the new full planning application of 2023 so unsympathetic and incongruous to the houses? What changed?
• Is Wigan Council aware of any motivation to let the industrial unit plans lapse to ensure the new surrounding houses were purchased at a high market value?

• Why was no Environmental Impact Assessment or LVIA required on a development within a few metres of so many homes and a school? Who made that decision, and how did you come to that decision?
• Why were drawings accepted that omitted existing homes? Was that error disclosed to the committee before the vote given it impacted on the reality of the plans? (Many public objections raised this issue and even those comments were misrepresented in the officer's report).
• Do you feel enough was done to educate the committee on the impact of the warehouses prior to their vote?

• Please provide the notification list, addresses, distances, and dates sent of the planning notifications. Was the school formally consulted?
• You said you followed legislation, do you agree that good practice required in-person engagement with affected residents?
• What provisions were made to ensure that blind, disabled, and elderly residents were properly informed about the development. Given the limited public notifications, it's important to know whether the council made any effort to make the consultation accessible to everyone in our community.
• If you say 99 letters were sent, and 94 objections submitted (a 95% rate of letters v objections), many citing clear errors in plans and seek further information - why did the planning officer who collated them not pick up on the errors / key issues / impact?
• Why were 70 objections reported when there were 94 objections + 2 neutral.
• Has Wigan Council communicated with or offered guidance to Garrett Hall School's employees in any way, relating to the Warehouse's development plans or external communications.

• Please provide details and dates of visits made to the site by the planning officer, any other council officials, prior to the planning permission being proposed.
• What criteria were used for the councillors to not hold a site visit? Did any member propose one? Given the knowledge and potential impact in the area, why did the planning officer or those signing it off not advice the Chair of the committee to recommend a site visit?
• Given councillors could not rely on first-hand context, is it possible they lacked a full understanding of scale and proximity?
• 2 Independent councillors objected, the remaining Labour councillors approved it. Were the Labour Councillors on the committee advised or whipped in any way to approve this development?

• Approved planning documents show 3-4m bunds, but residents report large gaps in bunds and a significant height difference in many places. Please provide details of the current plan with bunds. When will you complete an as-built survey and certify compliance?

• Given the clear impact that now exists within the community, what will Wigan Council do to compromise and find a solution to win back the trust of the community they represent?
• Current landscaping plans show that many of the trees planted will be much smaller when planted. What will be in place to ensure the community is protected from the visual, light, sound and pollutants in the 20-50 years it takes for those trees to grow?
• Many of the trees detailed are deciduous species, meaning they will have no leaves for 6 months of the year. Has the impact of this been considered?
• Does the proposed planting plan show rates of growth as trees planted on bunds take longer to get established because of water running off making growing conditions drier and therefore slowing growth? How long would it take for the trees to reach say ten metres in height?
• Does the landscaping plan require replanting of any failed trees and at what height?

• What enforcement has taken place by Wigan Council since building has commenced and when?
• What action has been / continues to be taken on dust control and water supply? Who is monitoring and how often?
• You said officers visited 'multiple times'. Please provide that site-visit log with dates and findings.

• What is the status of fire strategy and hydrant provision? Will occupation be prevented until GMFRS confirm compliance?
• The Fire Site Boundary Plans was drawn in 2021, but consultation with the Fire Service didn't start until 8th September 2025. Nearly four years later, by which time the warehouse structures were already built. GMFRS only have 15 working days to respond. These warehouses are dangerously close to our homes and the junior school, if a fire like the Cannock warehouse fire in May 2024 happened here, the consequences could be catastrophic. Can you explain this late consultation, do you accept responsibility for this late consultation, and do you recognise the danger it poses if a fire was to break out?
• Has United Utilities confirmed firefighting flows won't affect residential supply? Please publish the correspondence.

• You have permitted 24/7 operations and lighting. What reassurances will you give to the community that this will not impact their quality of life given the details provided about bunding and landscaping above?
• Will you require PLP to route HGVs via the A580 only and publish a routing plan?
• Will you implement parking permits on the residential streets surrounding the Business Park to prevent parking issues?

• How much weight did officers give to land-value or 'council revenue' versus community impact?
• Why was biodiversity offset money spent away from Astley? Will you review that allocation?
• How Bedford Colliery was chosen as the recipient?

• Given Bedford Colliery closed in the 1960's and the residents near to Green Lane couldn't tell us where Bedford Colliery was, please detail the specific area that will benefit of this biodiversity funding.

• Will you commission an independent review of this application's handling and publish it?
• If material errors are found, will you add conditions or pursue revocation if necessary?
• Will you co-operate fully with the Ombudsman and pause sign-offs pending outcome?

• Will you commit that no unit can be occupied until an independent 'as-built' compliance pack is verified?
• Will you fund independent air and noise monitoring at the nearest homes and school for 12 months and publish the results?
• Will you attend an on-site walkabout on Wednesday 15th October with residents and agencies to agree mitigations?
• Given the distress and evident harm caused to the community, will you issue a public apology and commit to training for officers, supervisors and committee members?
• Will you provide compensation to the residents affected by this development which has been built as a direct result of Wigan Council's approval.

• You said this decision 'followed the process'. But residents live in shadow with no empathy or support from Wigan Council. Do you still stand by your belief that this decision was the correct one?

Aidan,

We have just received an out of office for David Proctor returning 3rd November.

Can you please confirm that you will be handling this response today in his absence?

Thanks,
Astley Warehouse Action Group

Subject: RE: Re: Urgent Enforcement Request – Astley Business Park (Planning Application A/23/96226/MAJOR) – Consideration of Stop / Temporary Stop Notice

Importance: High

Hi Cllr Kenny,

As discussed yesterday, please see below for the proposed response from you to Cllr Gerrard, in relation to his e mail below and wanting to raise things under 'Urgent Business' on Tuesday.

Everyone copied in has had sight of the response – and if you're able to get it out to him as soon as you can, that would be great – just in case anything further needs to be picked up prior to the meeting.

Just let us know if you receive anything back and require any further advice/guidance in relation to things.

Kind regards,

[redacted]

Hi Cllr Gerrard,

Thank you for e mailing me to advise that you propose to raise the points outlined in your e mail below under Urgent Business at the meeting of Planning Committee on Tuesday. Please be aware though, that Urgent Business at Committee meetings is at the discretion of the Chairman of the meeting, and any Member wishing to raise urgent business, would need to notify and seek permission of the Chairman of the relevant Committee to do so.

Although you have notified me that you wish to do this with your e mail below – I am afraid that I cannot give my approval for what you've outlined below to be formally raised under Urgent Business at the meeting.

My reasoning for this is, you have stated that you wish to raise the matters because 'you have had no tangible response to the points raised' below - however, I was copied into the correspondences from senior Council officers to you, on the 30th September and the 1st October 2025, which advised that the site was being closely monitored and there had been no breach of planning control and therefore no justification for taking any enforcement action, with a copy of the Council's Planning Enforcement Policy also having been provided to you. The same correspondences also outlined what a 'stop notice' was and how/when this could be used and also outlined how there were currently no grounds or basis for the Council to service such a notice.

Although you may not agree with the responses that have been provided, responses have been provided nonetheless, which deal with the points/issues that you have raised.

It should also be noted that, given the ongoing situation and conversations between parties, the formal setting of a public Planning Committee meeting would not be the appropriate place to discuss these factors, with the Committee not being in the position to issue instruction to Council officers to deviate from Planning process.

I appreciate that this is an emotive issue for all concerned, but I have received assurances that appropriate dialogue with the relevant parties will continue, as well as proactive monitoring of the site, to ensure that the development is in line with the planning permission granted by the Committee and the Planning policies and procedures in place.

I trust therefore that I can rely on your co-operation in this matter and it will not be necessary for me to intervene at the meeting itself.

Subject: Urgent Enforcement Request – Astley Business Park (Planning Application A/23/96226/MAJOR) – Consideration of Stop / Temporary Stop Notice

Dear All

I am contacting you in my capacity as a member of the Planning committee, concerning Astley Business Park, under planning reference A/23/96226/MAJOR, approved in June 2024.

I have growing concerns that certain conditions of the permission are either not being adhered to or have not yet been properly discharged, and that ongoing works may be causing harm factors including but not limited to amenity, environmental, visual, traffic, health etc.

Adjacent residents have raised issues including visual impact, dust, noise, traffic, screening due to works proceeding before approved landscaping or screening is in place with concern that the risk of irreversible harm to local amenity and public health is increasing if enforcement does not act swiftly.

May I request the following.

1. That the Enforcement Team immediately review whether there is a breach of planning control, particularly in relation to conditions which have not been discharged but where works are underway.

2. That the Council consider issuing a Temporary Stop Notice or alternatively a Stop Notice, as continuing works are causing or will cause irreparable harm if not monitored.

3. That an officer report / briefing note be prepared and circulated to the Chair of the Planning Committee and members of the Planning Committee & Ward Councillors before the next Planning Committee meeting on the 7th of October outlining the enforcement status, recommended actions, and whether to defer any further works pending compliance. An update at the meeting would be welcome.

I believe these steps align with the Local Enforcement Plan and the Town Planning Enforcement Policy, as well as the Council's Customer Charter. Given the scale of Astley Business Park and its impact, prompt action is warranted.

Please acknowledge receipt and advise what actions are being taken and expected timescales if any.

Regards
Councillor Gerrard

Good morning,

Please can this be changed into a Stage 1 complaint.

Hi [redacted], [redacted]

This relates to the Astley Business Park site; the complainant has contacted us through various methods. My responses to Cllr Roberts are attached, along with two MP responses on the same issues.

To help with responding, I've included some comments in red below.

Please note that two potential enforcement matters have been raised – 1) height of bund and 2) hours of construction work – I have referred both of these to [redacted] so that they can be set up formally.

Thanks

Please provide details of your complaint:I have received three responses since I enquired about the PLP Construction site in Astley, communication by myself through my local MP and Councillor. In each reply I get the same response without answering the questions and issues I have raised. I was very disappointed in [redacted] reply as said she didn't want to repeat herself. I replied to her email because she didn't answered the questions I had asked, Therese also said she had responded to Councillor Roberts but this wasn't the case (I have responded to Cllr Robers twice – attached). I would say that I have answered her queries which is why, in my last direct email to [redacted] I advised that she may wish to submit a formal complaint, as I don't seem to be able to provide the answers she is looking for.

Why did the building of the units commence after all the houses were built and sold if planning permission has always been there? An outline planning permission was granted in 2015 for mixed use of the wider site (residential and industrial) (A/15/81365/OUTMAJ) – two parcels of land received detailed approval (reserved matters) for housing, but detailed approval was never sought for the industrial element of the approved outline scheme. The approved Outline scheme did not include any restrictions on the timing of how each element came forward, the land designation of the site has never changed, and Officer's assessment of the proposal was carried out in full cognisance of the proximity of housing around the site.

Planning was adapted after a lot of houses were built, why was this allowed and the surrounding residential area not taken into consideration? The nature of the surrounding area was taken into

account and this is clearly outlined in the Officer's report which was presented to the Planning Committee in June 2024 (a link for which has previously been sent). The approved application sought full planning permission for the development, this was not an application which was bound to follow the details shown in the 2015 Outline permission and as such the planning proposal was not adapted.

Why were units of this size allowed to be built in a residential area, original plans were for much smaller units and offices. As above, the approved application was not bound by the details shown in the 2015 outline application which sought only to establish the principle of development and not the detail. The approved units are located in a Primary Employment Area which is adjacent to a residential area, and they were deemed to be acceptable due to the reasons outlined in the Officer's report presented to Members in June 2024 which included the location of the units in respect of adjacent boundaries and the mitigation proposed in the intervening areas, i.e. the bund and associated landscaping.

How can planning be granted and not take into consideration the financial impact of hundreds of properties surrounding them? Our neighbours have been refused a mortgage, another can't sell her house because she has shared ownership. Lots of residents were offered these schemes to buy a property in your area. What happens when families can't afford to pay their mortgage? It's a fact that these units have already devalued the surrounding houses significantly? The impact of the financial effect on local properties as a result of an approved development is not a material planning consideration in cases such as this and cannot be taken into account when making a balanced planning decision. This is because planning decisions must be based on a wide range of factors that prioritise the public interest rather than private financial concerns. In this regard, a planning decision must consider such matters as the compliance of a scheme with its land designation, the benefits it may bring to the local economy, and the impact on local amenity. National Planning Practice Guidance confirms this position, stating that "*the protection of purely private interests such as the impact of a development on the value of a neighbouring property or loss of private rights to light could not be material considerations*". It is fully acknowledged in the Officer's report for this development, which was presented to Members of the Planning Committee, that local residents were very concerned about the impact of the proposal on their amenity. A balanced assessment of this impact was undertaken, and the proposal was ultimately found to be in accordance with both local and national planning policy, subject to the conditions attached to the decision.

What trees and shrubs are going to be plated and who is responsible for the up keep of them? Condition 30 of the approved development required details of the proposed landscaping to be submitted and determined under a condition application. Such details were submitted under application reference A/25/098808/CON and details of the planting can be viewed on the approved plans through the following link: Planning Documents. As planning permission goes with the land, I can confirm that the land owner(s) will be responsible for its upkeep.

Who is buying/renting the units? The use of the buildings forms part of the planning approval and in this respect, they are authorised for Class Use B2 and B8 which means general industrial use and storage and distribution use. Information on the particulars of the end users are unknown to the Council as it is only the use that can be controlled by the planning consent. Any future end users must abide by the terms of the approved planning permission.

What will be the working hrs of the units, 24hrs? Large noisy vehicles, floodlit carpark? Yes, the planning permission permits 24-hour use of the units and impact of these operating hours was fully considered in the Officer's report presented to Members in June 2024.

Why were only 99 letters issued when this site effects hundreds of houses? In accordance with statutory requirements and Wigan Council's Code of Practice for the Publicity of

Planning Applications, a total of 99 neighbour notification letters were sent to properties in the vicinity of the site. In addition, 2 site notices were displayed at prominent locations around the development site, one near the access of the site and the other within Thistlecroft estate. These notices remained in place for the statutory consultation period. A press notice was also published by the Council.

There were 70 objections why was this allowed to go ahead on this scale? The views of neighbouring residents is a very important part of the planning process and the above public consultation process was carried out to gather such views. Whilst each and every one was taken into account in the Officer's assessment, Officer's must take a balanced judgement in determining the acceptability of planning applications and this judgement is outlined clearly in the Officer's report which was presented to Members in June 2024.

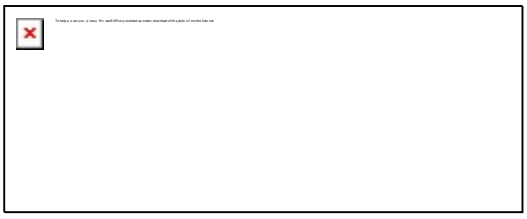
Please tell us how you think we can make things right:Please answer my questions and concerns. You need to take into account the wellbeing and welfare of the local residents as these units are causing a lot of stress and anxiety.Are you monitoring the site? I fully appreciate the concerns raised by residents living close to the site, particularly during the construction phase when the unfinished development can appear stark and intrusive. Officers within both the Planning and Enforcement teams are aware of these concerns and are actively monitoring the situation to ensure compliance with the approved plans.

The bund running around the units should be 3 metres in height ours is only 2 meters. As advised in the most recent response to Cllr Roberts, this matter has been referred to the Council's Planning Enforcement Team so investigate this on site.

We have a security risk as there is a footpath right at the back of our house, what are you going to do about that? Due to the location of the buildings approved, the existing footpaths had to be diverted to ensure they remained available for use by local residents. The footpaths are located on the other side of the approved bunds (from the neighbouring boundaries) and as such were not considered to be located in such a way that would create a security risk for local residents. There are many examples of existing footpaths in the local area that run much closer to local residential properties, such as public right of way 162 which runs along the immediate rear of properties on Withington Drive or no. 160 which runs alongside properties on Tanhouse Avenue and Riding Close.

The site is sometimes running from 7.30 and last night didn't stop until after 6.30. Thank you for bringing this to our attention. The approved Construction Environmental Management Plan restricts the working hours on site from 08:00 to 18:00 Monday to Friday and 08:00 to 13:00 on Saturdays. This will be forwarded to the Council's Planning Enforcement Team for further investigation.

Have you been out to the site to see the impact on the local area? I quote [redacted] and [redacted] will also be able to view the approved landscaping proposals which, when finalised/matured, will provide a significant level of screening from surrounding residential areas' These bunds will not provide significant screening to hide these monstrosities the scale and proportion is not acceptable. The landscaping projection is 15yrs! What do we do in the meantime? As mentioned above Officer's have visited the site on numerous occasions. It is appreciated that the construction phase, when the development is unfinished, can appear stark and intrusive, however it remains the Council's view that the once the temporary construction phase is complete and the



approved landscaping in place, the impact of the development on local residents will be acceptable.

My priority is the well-being of my family and you are putting it at risk. My 9yr old daughter has recently been diagnosed with asthma and now requires an inhaler. The amount of dust that was flying around was clearly visible. We were unable to open windows or hang washing out as the garden was covered in thick orange dust. This is not acceptable. It is acknowledged that there was a particular issue with dust a number of months ago when the weather was particular warm; such concerns were dealt with by the Council's Planning Enforcement Team and the developer put in place a number of measures to mitigate the impact which appeared to resolve the issue. If you have any continuing concerns in this regard, please let the planning enforcement team know through this link - Planning Enforcement Reporting Form | Instructions – Wigan Council and this matter can be investigated further.

The amount of stress you are putting on myself and my husband is unbearable, he is going to work and coming home to this eyesore consequently worrying all night about the impact it will have on us financially. I'm worried that it will make my husband ill and that will impact myself and my children and this is not acceptable.

Subject: Re: Stop Notice, Astley Business Park

David.

Thank you for your reply regarding the concerns raised about the Astley Business Park development. While I note your comments, I must respectfully disagree with the conclusion that there are no grounds to consider serving a stop notice.

Firstly, although you state there is "no evidence whatsoever of a breach," local residents and committee members have raised legitimate concerns that the development is not in keeping with the approved plans, particularly in relation to its scale, massing, and impact on adjacent residential properties. The visual and environmental harm caused by the works as they currently stand is significant, and there remains reasonable doubt as to whether the development is proceeding in accordance with the spirit and detail of the approval. Where doubt exists, the Council does have the power and indeed the duty to intervene in order to prevent potential irreversible harm.

Secondly, you highlight that members were provided with drawings and cross-sections during the presentation, yet it is clear from subsequent feedback that the extent of the impact was not fully appreciated. The fact that no site visit was requested does not mean members fully understood the implications, but rather that the information presented at committee did not sufficiently illustrate the development's relationship with surrounding housing and the local environment. If members had

been misinformed or inadvertently misled—even unintentionally—that constitutes grounds for reconsideration.

Thirdly, the planning system is designed to balance development with the protection of existing communities. Given the strength of local opposition and the concerns regarding potential non-compliance, it would be premature to allow construction to continue unchecked. A stop notice would not be punitive but precautionary, ensuring that the development can be reviewed in detail before further potentially damaging works proceed.

In light of the above, I urge the Council to reconsider its position and issue a stop notice on the Astley Business Park development until the situation is clarified. This would help restore confidence in the planning process and demonstrate that the Council is acting in the best interests of both residents and proper planning procedure.

Subject: RE: Stop Notice, Astley Business Park

Councillor Gerrard,

Thank you for your email. As I said in my earlier response, there is no evidence whatsoever of a breach, whether in relation to conformity with the approved plans or otherwise, and so the Council has no basis in the legislation to consider serving a stop notice.

In relation to whether Committee members were misled or did not fully understand what was being proposed, the officer's presentation clearly showed the relationship between the development and adjacent houses, with scaled cross sections being shown relating to Tanhouse Avenue and Norton Nook. Members do of course also have access to the full online planning file including all drawings and assessments. If Members had felt that it was not possible to understand the development from the available information then I would have expected there to be a vote for a site visit – as you know this did not happen.

I hope this is of assistance.

Subject: Re: Stop Notice, Astley Business Park

David.

I don't believe the development is being g carried out in accordance with the application, im also angered that a full section of housing wasn't even present on the slides from the meeting.

I don't believe all councillors on the committee had all the full and accurate details on the day as is evident with the missing houses.

The scale is disproportionate to the slides we were presented with and I feel we was misled even though I voted against it.

I understand you are reluctant to issue a stop notice against a company like peel, however no matter what the scale of the application be it a garden fence or a building development, a stop notice should be issued if we believe the application isn't being adhered too.

This would also give an opportunity for the developers to adjust their plans and add features such as a living wall on the side of the warehouses if needed.

I urge you to reconsider and take some positive action for the council rather than being passive and allow this monstrosity to continue in its current form.

Regards
Cllr Gerrard

Subject: RE: Stop Notice, Astley Business Park

Councillor Gerrard,

Thank you for your email.

A stop notice is a tool that the Council has to prevent development from continuing, where there is evidence of a breach of planning control that is causing severe harm. In this instance, while we understand the concerns being expressed, there is no evidence of any breach and so the Council has no basis to serve a stop notice.

Our team have visited the site on numerous occasions to carry out proactive monitoring, and we are content that the bunds (and the rest of the development) are being constructed in line with the planning permission. As you know the development is still under construction, and so there is further work for the developer to do to install fencing and the landscape planting.

I've attached a copy of the Council's planning enforcement policy as background. I trust this assists.

Subject: Stop Notice, Astley Business Park

Good Afternoon

Considering the negative coverage of the building activity at Astley Business Park and as a member of the planning committee, I would like a stop notice to be issued immediately so that all concerns that residents, councillors, MP and Mayor are raising are fully investigated, the main ones being the bunds not being installed as per the planning applications and that I believe that the committee was misled in regards to the size and scale of the development is much larger than what was perceived at the application meeting. This emphasises the importance of site visits on sites such as this given the scale and proximity to residents.

Please take this email a formal request that a stop notice is served immediately under TCPA1990 s.171e and if possible, an enforcement notice be brought back before the committee.

Regards
Councillor Gerrard

Introduction

Effective and proportionate enforcement of planning controls is essential in protecting the quality of our local environments, and is important in maintaining the public's confidence in the planning system.

Wigan Council has published this Local Enforcement Plan to explain how we will deal with alleged breaches of planning control, so that all parties are clear on what to expect in terms of our response times and the process involved. The Plan should be read alongside the Council's corporate Enforcement Policy, which can be viewed here.

Background

Legal background

The legislative background for planning enforcement is the Town and Country Planning Act 1990 as amended ("the Act"). Section 171A of the Act defines a breach of planning control as:

- *the carrying out of development without the required planning permission; or*
- *failing to comply with any condition or limitation subject to which planning permission has been granted.*

This includes any contravention of the limitations on, or conditions belonging to, permitted development rights.

The Act provides a range of tools that authorities can use to take "formal" enforcement action. These include:

- Breach of Condition Notices (s187 of the Act)
- Planning Enforcement Notices (s172 of the Act)
- Stop Notices and Temporary Stop Notices (s183 and s171E of the Act)
- Injunctions (s187B of the Act)

In addition to these definitions and powers relating to development, Section 215 of the Act also gives authorities the ability to take action where land is in a condition that impacts on the amenity of their area. Under this power authorities can serve notice on landowners specifying the steps to be taken to address the impact.

The Act also requires authorities to consider when it is "expedient" to take enforcement action, having regard to the development plan (their local planning policies) and other material planning considerations.

National policy and guidance

The National Planning Policy Framework (NPPF) and Planning Policy Guidance (PPG) set out how the Government expects authorities to approach potential breaches of planning control. The NPPF and PPG also expand on the ways that authorities should use "informal" approaches to resolving planning breaches where appropriate, without the need to initiate the "formal" steps available through the legislation.

The role of the Enforcement Plan

This Plan sets out how the Council will deal with alleged planning breaches at each stage of the process, from initial reporting of a breach through (if necessary) to prosecution in court. It also explains how, in appropriate cases, the Council will offer its services to work positively with property owners to support them in what they are trying to achieve, while still securing rectification of any breach.

How the Council will deal with alleged planning breaches

Reporting a concern

Any report of a planning breach must be made in writing. The form on which this should be done is on the Council's website at https://www.wigan.gov.uk/Resident/Planning-and-Building-Control/Planning/Enforcement-and-breaches.aspx Reports made only by telephone cannot be accepted and will not be investigated. For customers who do not have access to the internet there are self-service facilities at the Wigan Life Centre and in libraries; if these are unavailable then friends or family may be able to help.

The Council will only investigate alleged breaches where **all** the following information is supplied:

- Address of the alleged breach
- Details of the alleged breach, including:
    - Nature and location of any new building, alteration or structure alleged to have been created without planning permission
    - Nature of any use alleged to be under way without planning permission, including times when such a use is occurring if intermittent
    - Nature of any contravention of a planning condition, including times if intermittent
    - Nature of any impact on amenity arising from the condition of land, including specific information about what is causing the impact, details of where the land can be seen from, and the length of time the land has been in the condition described.

- Name, address (postal and email) and telephone number of the person reporting the breach (this will be kept strictly confidential but anonymous reports cannot be accepted and will not be investigated)

If photographs of the alleged breach are available, these may assist the Council. They can be uploaded alongside the form, via the web page above. Under no circumstances should complainants place themselves in any danger or expose themselves to any risk in an attempt to obtain photographs.

The Council may itself become aware of a breach without a report being received from an external party. These cases will be logged and acted upon in the same way as any other breach, in accordance with this Plan.

Categorisation of reported breaches

On receiving a report of a planning breach, the Council will assign it to a category according to the degree of harm that appears to be being caused to planning interests. Reported breaches will be categorised as follows:

Category	Description
P0	Extremely severe harm to planning interests or planning breach resulting in risk to public safety
P1	Significant harm to planning interests: • Operational development without planning permission (other than as P2 below) • Change of use causing material impact on surrounding area with respect to amenity or the intensity of the activity • Development started without discharging pre-commencement planning conditions • Breach of condition leading to irreversible harm or significant impact on amenity
P2	Material breach of planning control but limited harm: • Operational development in excess of permitted development rights • Development not in accordance with approved plans • Breach of condition but not irreversible impact or significant impact on public safety • Development constituting a breach of planning control but also subject to other legislation, eg the Party Wall Act or civil processes dealing with encroachment Land in a condition leading to impact on amenity: • Impact due to presence of physical features on the site, eg mounds of earth / rubble, dilapidated structures • Land visible from public vantage points • Impact not due to a temporary situation, eg active demolition or development site
P99	Trivial breach of planning control, no material harm, eg fence marginally exceeding permitted height Land in poor condition but visible only from one or a small number of private properties, eg domestic rear gardens Land that is in poor condition but where the only impact arises from overgrown vegetation (in extreme instances such cases may be classified as P2) Land that is in poor condition but where other legislation (for example the Building Act 1984) provides more appropriate powers for securing a lasting solution – such cases will be passed to the relevant Council service for further consideration

Timescales for investigation

Other than in exceptional circumstances, the Council will carry out its initial investigation into reported breaches within the following timescales:

- P0 – within 1 working day
- P1 – 7 working days
- P2 – 15 working days
- P99 – breaches in this category will be recorded but will not be investigated further

The Council will normally provide an update to the person reporting the breach within three working days of carrying out its investigation, and no later than three working days beyond the timescales set out above.

Investigation of ongoing breaches

Where a report relates to an ongoing breach (for example a construction site working outside permitted hours, or a business operating from a domestic property that is receiving visits), the alleged breach will be assigned to a category in line with the above, and the person making the report will be provided with log sheets on which to keep a record over a period (normally 21 days) of the activity constituting the breach. If the log sheets are not returned, or are returned but do not contain sufficient information to clearly determine that a breach is occurring, the case will be recategorised as P99, and will not be investigated further.

Retrospective planning applications

Where the Council considers there to be a reasonable prospect that the development that has occurred would comply with the Council's planning policies, the property owner will be invited to submit a retrospective planning application, which may be for the development in its entirety or for part of it.

If a retrospective application is invited, a valid application must be submitted within 28 days of the Council requesting it. If a valid application is not submitted within this timescale the Council will normally proceed to enforcement action, subject to confirmation that is expedient to do so. No reminders will be sent.

A retrospective application will not be invited in circumstances where the development that has occurred is clearly contrary to the Council's planning policies. The Council will continue its enforcement process in relation to these cases even if an application is submitted. If a retrospective application is submitted and refused, applicants have a right of appeal to the Planning Inspectorate against this refusal. If no retrospective application is made, applicants wishing to make a case that the development being enforced against should have been granted planning permission, will be expected to do so via a Ground A appeal against any Enforcement Notice. Where appropriate the Council will seek to invite the Planning Inspectorate to deal with all relevant appeals concurrently.

More details on the appeals process can be found on the Planning Inspectorate's website.

If the property owner believes that the development constituting the alleged breach has been in place for sufficient time to be "immune" from enforcement action (normally 4 years for building works and

10 years for changes of use), they have the option under the Act to submit an application for a Certificate of Lawful Development.

Resolution by negotiation

In some cases the steps needed to rectify a planning breach are simple for the property owner to achieve. This is normally the case in respect of land in poor condition. Where it appears that the breach can readily be rectified, the Council will attempt to secure the required steps through negotiation with the property owner. In respect of land in poor condition, the steps required will be those that would result in a sustainable solution to the amenity impact and minimise the possibility of repeat cases, for example the permanent clearance and levelling of land or, where appropriate, the erection of a substantial hoarding in place of temporary fencing. The Council will write to the property owner once, setting out the steps required and the timescale for completing them, which will normally be 28 days. If the breach has not been fully rectified within this timescale, the Council will normally proceed to enforcement action or the service of a Section 215 notice. No reminders will be sent. The Council will not entertain protracted negotiation or repeated submissions that incrementally adjust what is proposed.

"Formal" enforcement action

The Council will normally move directly to "formal" enforcement action in the following circumstances:

- Where a retrospective application has been refused – in these circumstances the Council will serve the enforcement notice at the same time as refusing the application
- Where a breach has not been resolved by negotiation in the required timescale
- Where the extent or nature of the breach means that the works that have been carried out are clearly not in accordance with the Council's policies and / or it appears that resolution by negotiation is unlikely

In determining whether "formal" enforcement is appropriate, the Council will make an initial assessment of whether it would be likely to be in the public interest for the case to be prosecuted should any notice not be complied with. The final decision on any prosecution will be made at the appropriate time.

Many of the types of action that the Council can take come with a right of appeal.

Prosecution

Although carrying out development without planning permission is not normally a criminal offence, the Act creates a number of offences relating to failure to comply with formal Notices, including all the types listed on page 2. A range of penalties apply, including in some cases unlimited fines.

The Council will make its decisions as to the prosecution of any planning enforcement related offence, in line with its corporate Enforcement Policy.

Works in default / direct action

The Act provides the Council with powers to take direct action to remedy planning breaches. The Council will make its decisions as to any use of these default powers on a case by case basis, having regard to:

- The degree and type of harm being caused by the breach, including to the wider community and to the public's confidence in the planning system
- The likelihood of the breach being resolved by any other means
- The effective use of public resources

Cases where assistance from other Council services may help remedy a breach

The Council recognises that there are situations in which property owners have breached planning control unintentionally or with the best of intentions. Although this does not alter the fact that a breach has occurred and will need to be remedied, the Council will also consider whether there is any other assistance that it can offer the property owner to achieve their overall aim.

In particular the Council will aim to assist individuals who are seeking to establish a small business by operating from their home, and who in doing so have changed the use of their property so as to include a component of business use. These types of activities change the character of the property and can have a significant effect on the wider residential area.

Businesses encountering these types of issues are often reaching a point where they are ready to progress into their own accommodation, in a commercial area appropriate for the use. If this is the case the Council's Economic Development service will work with the business owner with the aim of identifying a suitable premises. This service will also explore whether the business owner requires any other support.

Offering this support does not mean that the Council is not concerned about the breach of planning control that has taken place. The Council will continue to seek rectification of the breach through its planning powers, in line with the approach set out in this Plan. The Council will consider whether it is appropriate to allow longer periods to comply with its requirements: this will depend on the severity of the impact that the business is having on the surrounding residential area, and will be kept under review.

Enforcement aligned to other activity

This Plan sets out the basis for a consistent and transparent approach to planning enforcement, which will apply in all cases, including those reported by external parties and those that it identifies itself.

From time to time the Council may, in line with a corporate priority or as part of a package of coordinated activity, adopt an approach of actively seeking to identify breaches in a specific geographical area or of a particular type. Breaches identified in this way will be categorised and dealt with in line with this Plan.

Sources of further information and assistance

The following sources of information may assist property owners in understanding the planning system, and their rights and options:

- Wigan Council website www.wigan.gov.uk – information about Wigan Council's planning policies, how to apply for planning permission, and how to get further advice
- The Planning Portal www.planningportal.co.uk – information about what does and does not require planning permission, how to apply, and an online portal to submit planning applications
- The Planning Inspectorate www.gov.uk/government/organisations/planning-inspectorate - information about the appeals process
- The Royal Town Planning Institute's "Planning Aid" service https://www.rtpi.org.uk/planning-aid/ – a source of free advice from qualified planners via the industry's professional body
- Planning consultants who are chartered members of the Royal Town Planning Institute (MRTPI) – via an internet search

Subject: Fw: That's TV Request - Right of Reply

Good morning,

We have had another enquiry about the Astley warehouses from That's TV, similar to what we have been asked before. I've drafted a suggested response if you're happy with this?

A Wigan Council spokesperson said: "This application went through our planning consultation and committee process, which included letters being sent to neighbouring properties.

"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.

"We will continue to monitor the site throughout construction, ensuring this development brings new jobs and investment to the area is delivered properly."

Background information:

- *This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*
- *Ahead of this Planning Committee meeting, letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of around 70 addresses in the area. All objections raised were fully considered during the decision-making process.*
  • *Local authority officers have been on site and are in close communication with the developer and their construction partner to ensure all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, and will continue to do so throughout the duration of the development .*

Some people who received this message don't often get email from [redacted]@thats.tv. Learn why this is important

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Good morning,

I'm a reporter with **That's TV Manchester**. We're preparing a segment for **Freeview Channel 7** about residents' concerns over the industrial development behind the **Henford Estate in Tyldesley**, currently under construction by PLP (part of Peel Group).

Residents have told us the project has had a severe impact on their quality of life and that they feel **consultation and engagement by the council were inadequate**, with some saying they were unaware of the full scale of the approved plans.

We'd like to give Wigan Council a **right of reply** to ensure our coverage is balanced. Specifically, we'd appreciate your response to:

1. Claims that **residents were not fully consulted** or informed about the scale of the approved development.
2. How the council is **monitoring the ongoing construction** to ensure planning conditions are met.
3. Any measures being implemented to **mitigate the impact** on neighbouring properties (screening, landscaping, etc.).

If possible, please provide a response or statement by **3:30pm today.**

Please let me know if Mr. Aidan Thatcher or another spokesperson is available for a short on-camera or phone interview.

Best regards,

[redacted]

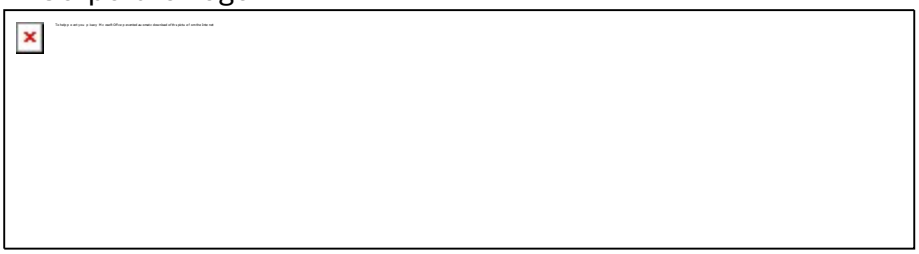
To: [redacted]; Proctor, David
Cc: Thatcher, Aidan; [redacted]
Subject: RE: Tyldesley warehouses

Thanks [redacted]

@Proctor, David would you be happy for the below to be sent to the Journal? We'll also remind them of Aidan's previous comment, rather than providing a new one.



- *We are proactively monitoring the development and the conditions on site, and are liaising with the developer about the timing and efficacy of the screen landscaping measures.*
- *These measures will significantly mitigate the impact on residents. Although the approved landscaping scheme will naturally take years to fully mature, a level of screening will be achieved immediately and will be enhanced year-on-year. The developer has confirmed that planting will commence within the next planting season, which begins in November.*
- *All elected members receive a weekly list of planning applications from across the borough, allowing them to check for applications that may impact their ward – whether from within their own ward itself, or in neighbouring wards. This list is also available online along with other planning application information.*
- *Members are not notified of an application in their ward going to planning committee as a matter of course. However, all residents who had commented were notified and the committee date was indicated on the website.*
- *Letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal.*
- *The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.*
- *The need for a site visit is a matter for the members of the planning committee, who can defer an application if they consider a site visit is necessary.*
- *The Section 106 money was based on the applicant's need to provide a 10% biodiversity net gain (a requirement of Places for Everyone, a part of the Council's Development Plan at the time of determination). The costs were calculated by the council's Greenheart team and a site in the locality was identified as being suitable for providing the required biodiversity habitat units. No suitable sites within the Astley ward were identified.*
- *All the potential implications and risks of the development were fully considered. The planning officer's report to elected members includes a dedicated section on both noise and air quality. No evidence was found that such matters would have a detrimental impact on local residents, including children.*
- *We take all residents' concerns seriously and have carried out site visits to check compliance, and met with the site manager to discuss concerns.*

Many thanks,

Subject: FW: Tyldesley warehouses

Hi David,

As I believe you're aware, we've received an enquiry from the Leigh Journal following complaints from elected members about the Chaddock Lane warehouse (see email below).

Based on the recent presentation to residents and information already provided to members, I've been drafting some bullet points in response to the questions raised. Please could you take a look at the below and let me know your thoughts? There are also a couple of points for clarification highlighted in red if you're able to assist with those please.

Tree planting plans will not block the warehouses, could damage properties, and will take years to make any difference. The bunds are not reaching the required 3m, and residents themselves are having to measure them.

- We are proactively monitoring the development and the conditions on site, and are liaising with the developer about the timing and efficacy of the screen landscaping measures.
- These measures will significantly mitigate the impact on residents. Although the approved landscaping scheme will naturally take years to fully mature, a level of screening will be achieved immediately and will be enhanced year-on-year. The developer has confirmed that planting will commence within the next planting season which begins in November.

Councillors were kept in the dark – the application was logged in November 2023 under Tyldesley, not Astley, and we were not informed about the June 2024 planning meeting. Had we known, we'd have attended in person.

- All elected members receive a weekly list of planning applications from across the borough, allowing them to check for applications that may impact their ward – whether from within their own ward itself, or in neighbouring wards. This list is also available online along with other planning application information.
- Members are not notified of an application in their ward going to planning committee as a matter of course. However, all residents who had commented were notified and the committee date was indicated on the website. This information is provided 5 working days in advance of a meeting. (can you confirm this please? Might be good to include!)
- Letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal.
- The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.

Lack of consistency in the planning regulations - residents often get their extension rejected at planning for reasons ignored within this application - air quality, reduction of light, impact on

neighbours. The planning committee never visited the area to see the true scale of the development.

- The need for a site visit is a matter for the members of the planning committee, who can defer an application if they consider a site visit is necessary.

Section 106 Money: £200,000 has been allocated to Bedford Colliery, but why is Astley – directly impacted – seeing no benefit?

- The Section 106 money was based on the applicant's need to provide a 10% biodiversity net gain (a requirement of the Places for Everyone, a part of the Council's Development Plan at the time of determination). The costs were calculated by the council's Greenheart team and a site in the locality was identified as being suitable for providing the required Biodiversity Habitat Units. No suitable sites within the Astley ward were identified. (not sure on these acronyms – excuse my ignorance! Can you clarify please?)

The planning report's claim that 60ft units are "not detrimental" to residents is indefensible - and offensive.

Subjective opinion. Suggest we ignore. Agree

Noise, dust, air quality, 24/7 operations and risks to children have not been properly considered - damages to houses are now ignored by the council and PLP, without support to the residents.

- All the potential implications and risks of the development were fully considered. The planning officer's report to elected members includes a dedicated section on both noise and air quality. No evidence was found that such matters would have a detrimental impact on local residents, including children.
- We take all residents' concerns seriously and have acted to confirm and ensure ongoing compliance.

(How have we acted? Can we say anything else about supporting residents? – carried out site visits to check compliance, met with the site manager to discuss concerns,

Many thanks,

[redacted]

Subject: Tyldesley warehouses

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi guys,

I've had an email from Cllr Eastoe regarding the warehouse development in Tyldesley. She said she's attended community meetings with other councillors and is unhappy about aspects of the planning application.

It's quite long so I'll copy over their concerns, to see if the council wanted to address any of these specifically or add any further comments about the development?

At meetings with council officers and through residents' concerns, councillors have challenged the way this application has been handled. Key issues include:

Tree planting plans will not block the warehouses, could damage properties, and will take years to make any difference. The bunds are not reaching the required 3m, and residents themselves are having to measure them.

Councillors were kept in the dark – the application was logged in November 2023 under Tyldesley, not Astley, and we were not informed about the June 2024 planning meeting. Had we known, we'd have attended in person.

Lack of consistency in the planning regulations - residents often get their extension rejected at planning for reasons ignored within this application - air quality, reduction of light, impact on neighbours. The planning committee never visited the area to see the true scale of the development.

Section 106 Money: £200,000 has been allocated to Bedford Colliery, but why is Astley – directly impacted – seeing no benefit?

The planning report's claim that 60ft units are "not detrimental" to residents is indefensible - and offensive.

Noise, dust, air quality, 24/7 operations and risks to children have not been properly considered - damages to houses are now ignored by the council and PLP, without support to the residents.

Thanks,

Subject: **URGENT** - Astley business park, address consultation list
Importance: High

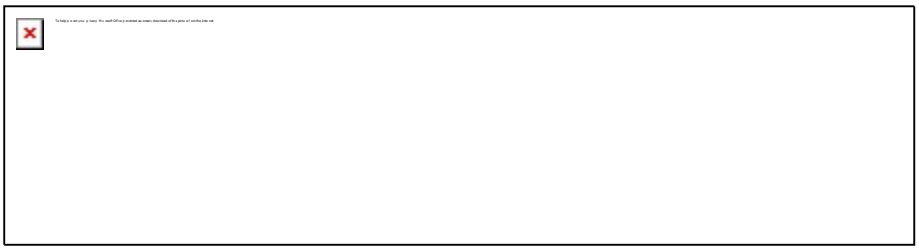
[redacted], [redacted]e,

Really urgent request please – [redacted] has contacted me and requested a 'list', as an attachment, of all the addresses we wrote to on the Astley Business Park planning application consultation.

I've seen the responses that have been prepared, and within those responses it states that..... *in accordance with statutory requirements and Wigan Council's Code of Practice for the Publicity of Planning Applications, a total of 99 neighbour notification letters were sent to properties in the vicinity of the site*..... in preparing those responses, I assume [redacted] / [redacted] (on behalf of David), that we've created a document with a list of the 99 addresses we wrote to be able to confirm this statement?

Can you confirm a. if we did create an address list, and hopefully if we did, one of you has a copy that you can share with [redacted] please. If not, I'll need to get Business Support to run this from scratch from the Uniform database (which is a bit more complex than it sounds as the database will include comments from residents who we didn't necessarily consult formally, i.e. they found out about the application through site notice, word of mouth, etc.)

If you could let [redacted] and myself know urgently, please. with what the position is on this, that would be appreciated.



Many thanks

Hi [redacted], if this is a political meeting between the Mayor and ward members then I'd suggest it is arranged and we will confirm later whether officer attendance is needed.

The details you've got for the ward councillors are correct.

Regards
David

Hi David
Thank you for coming back to me.
Andy has made a public commitment to meet with the Councillors, so I think we need to get that arranged if that's OK please.
Can you confirm the details below are correct and I'll send an invite out. If you feel one of your officers needs to be present, please let me know.
Many thanks,

Subject: Re: URGENT REQUEST FROM ANDY BURNHAM: Industrial units in Astley

Hi [redacted],

We met all 6 of the ward Councillors last week (the site spans two wards), and a further meeting with the residents' steering group and Michael Wheeler MP is in the process of being arranged.

Mindful to avoid duplication so we wondered if a briefing just with Wigan officers and the Mayor might be a helpful first step.

If you could let us know how you want to proceed with the above in mind.

Thanks

David

Hi David

Thank you for providing the attached information.

Andy's asked that a arrange a meeting with the relevant councillors on Monday to discuss this issue.

I'm looking at 6 – 6.30 pm on Monday, 22nd September via teams.

Could you let me know who I should invite?

Many thanks,

[redacted],
Response from Wigan is that there are no concerns about the process (below). The decision was made a long time ago. I have attached some slides which have been sent to councillors and residents. These hopefully provide context for the Mayor but get back to me if there are any questions.
Many thanks,

Thanks,
Residents certainly disagree with the decision (taken by Planning Committee), but there are no concerns here whatsoever about due process, and the timeframe for JR elapsed months ago.
The attached set of slides gives a bit more background (the ward members have this already and I've just agreed for them to send it on to residents), perhaps if you have a look at this and then give me a shout if you need a further catch up.
Regards
David

Dear Michael,

Thank you for your recent correspondence on behalf of your constituents regarding the development of warehousing units at Astley Park Industrial Estate, under planning permission reference: 'A/23/96226/MAJOR'.

I fully appreciate the concerns raised by residents living close to the site, particularly during the construction phase when the unfinished development can appear stark and intrusive. Officers within both the Planning and Enforcement teams are aware of these concerns and are actively monitoring the situation to ensure compliance with the approved plans.

Following a recent site inspection by one of our Planning Enforcement Officers, I can confirm that Unit 1 is currently under construction. During the visit, the Officer used a measuring tool to verify the height of the structure, which was recorded at 18.3 metres, a height consistent with the height of the unit on the approved plans. The unit is also correctly positioned in accordance with the approved site layout.

In direct response to your request, I have attached the following approved documents for reference:

- The site layout plan, showing the location of all approved units.
- The elevational drawing for Unit 1.
- The landscaping scheme for the area surrounding Unit 1, including details of the bund and proposed tree planting.

While the bund identified within the drawings has already been formed on site, the necessary landscaping works have not yet commenced due to the ongoing construction. Once implemented, the landscaping will provide additional screening and help soften the visual impact of the development on neighbouring properties.

In response to previous enquiries on this development, links to the approved plans and guidance on how to access them have been shared with residents. I acknowledge that the constituents who contacted you may not be aware of this facility. For ease of access, the

approved plans can be viewed on the Council's website using the application reference number A/23/96226/MAJOR via the following link:

Search and comment on planning applications

Monitoring of the site by the Council's Planning Enforcement Officers is ongoing and will continue throughout the construction period. Further visits will be undertaken as necessary to ensure that the development is being carried out in accordance with the approved plans and conditions.

I hope this response provides clarity and reassurance to both you and your constituents that the ~~Planning Department~~Council remains committed to working constructively with local residents and the developer to ensure the delivery of a high-quality scheme, in full accordance with the approved planning permission.

Yours sincerely,

David Proctor

Just to advise that there was a meeting of around 200 residents yesterday to which councillors and Michael Wheeler, the MP attended. The residents have contacted the BBC and I understand the MP has an interview with them tomorrow.
Please could you advise whether the effect on visual impact was dealt with and also advise why there was not a site visit so that the committee could appreciate the impact these 15m monstrosities would have on the houses.

Best wishes

Dear Cllr Roberts,

Thank you for your email.

Alison has explained things very clearly from a planning perspective.

This planning application was allowed because the Council's Planning Committee was satisfied that it was policy compliant and therefore approved it. Committee considered both the reasons for granting permission and the objections that had been made against the application in reaching their decision. Due and legal process was followed.

I'm afraid there is very little else that can be added. Anyone who at the time believed Committee's decision was flawed legally had an opportunity to challenge it via the courts. No such challenge was made. The result of this is that there exists a valid and lawful planning permission for the development as set out in the application.

Hi [redacted]
Please would you read below.
The residents have asked the MP to become involved why this planning application was allowed.
As you can see they are large monstrosities overlooking recently built houses.
I wonder if you could advise on why this was allowed to happen.
Some residents are in financial difficulty after taking a help to buy scheme and now needing to remortgage. Residents are saying building societies won't re mortgage but where they do, they are asking for 7%!
The residents were under the impression that the employment units would be single storey and not 10 to 15 metre monstrosities overlooking their properties.

Best wishes

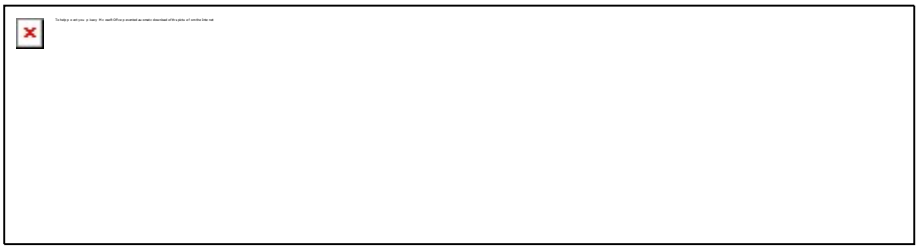
Subject: RE: Astley PLP

Good Afternoon Cllr Roberts
Apologies, I hadn't appreciated the urgency.
The committee report for the more recent approval (A/23/96226/MAJOR) is available online at: Agenda for Planning Committee on Tuesday, 11th June, 2024, 2.00 pm
It includes full details of the approved units, as follows:
Unit 1 measures 15.8 metres x 8.4 metres with a total height of 18.3 metres and located close to the northern boundary of the site.
Unit 2 as proposed is located to the west of the site and would measure 13.6 metres x 9 metres with a maximum height of 18.3 metres.
Units 3 and 4 as proposed are located to either side of the main accessway. Unit 3 measures 8 metres x 3.6 metres with a maximum height of 13.7m.
Unit 4 is the smallest of the proposed units, measuring 7.6 metres x 3.7 metres with a maximum height of 13.6 metres.
The committee report also sets out the careful consideration that was given to the visual and amenity impacts in relation to neighbouring occupiers and the measures that will be in place to mitigate against the impacts including a landscaped bund planted with both deciduous and evergreen trees. The report also summarises and addresses the c. 70 objections that were received.

It is important to note that the earlier planning permission (A/15/81365/OUTMAJ) granted in 2017 was in outline, meaning no details were approved of the size or siting of the employment buildings.
Having read the officer's report and Design and Access Statement (available online: A/15/81365/OUTMAJ | Outline application for a mixed use development comprising up to 28,000 SQM of employment floor space (use classes B1, B2 and B8), up to 165 dwellings, land for community use, open space, landscaping and association

infrastructure (all matters reserved except employment access from Chaddock Lane; residential access from Garrett Hall Road and Garrett Lane) | Land Off Chaddock Lane Tyldesley), there was reference to the potential for the employment units to be smaller in scale to suit local businesses, and this was shown on an indicative Masterplan. However, the only document formally approved was the Parameters Plan, which identified the general location of employment and residential development, but didn't include details of the size of the employment buildings.

On the face of it, this may explain why the issue has been raised over the scale of the units. However, for clarity, the more recent application was a full application so would not have been bound by the parameters of the previous outline approval in any case.



I hope this helps to clarify the position.

Kind regards

Hi [redacted]
Please could you advise the difference between the early planning approval and the 2024 one.
The residents are saying that although they knew it was always earmarked for employment use, the size of the structures has altered significantly from single storey to around 10 to 20 metres high.
Also, they are saying they were never informed of the 2024 application
As you may be aware, the MP is involved in this.
I realise house values are not a consideration but surely monstrosities of this size are unfair.
Residents are saying they are unable to get mortgages now because of this.

Best wishes

Hello there, I hope you're well?

We'd like to request an interview/statement from Wigan Council about concerns residents have raised about planning permission that's been granted for four warehouses in Astley. Residents say that the plans were changed from low level units to something completely different without them being informed or given an opportunity to oppose them. They're concerned about the impact the size and proximity of the warehouses will have on residents houses, view and livelihoods.

Please can we request an interview or statement tomorrow.

Subject: Stop Notice, Astley Business Park

Good Afternoon

Considering the negative coverage of the building activity at Astley Business Park and as a member of the planning committee, I would like a stop notice to be issued immediately so that all concerns that residents, councillors, MP and Mayor are raising are fully investigated, the main ones being the bunds not being installed as per the planning applications and that I believe that the committee was misled in regards to the size and scale of the development is much larger than what was perceived at the application meeting. This emphasises the importance of site visits on sites such as this given the scale and proximity to residents.

Please take this email a formal request that a stop notice is served immediately under TCPA1990 s.171e and if possible, an enforcement notice be brought back before the committee.

Regards
Councillor Gerrard

Subject: Urgent Enforcement Request – Astley Business Park (Planning Application A/23/96226/MAJOR) – Consideration of Stop / Temporary Stop Notice

Dear All

I am contacting you in my capacity as a member of the Planning committee, concerning Astley Business Park, under planning reference A/23/96226/MAJOR, approved in June 2024.

I have growing concerns that certain conditions of the permission are either not being adhered to or have not yet been properly discharged, and that ongoing works may be causing harm factors including but not limited to amenity, environmental, visual, traffic, health etc.

Adjacent residents have raised issues including visual impact, dust, noise, traffic, screening due to works proceeding before approved landscaping or screening is in place with concern that the risk of irreversible harm to local amenity and public health is increasing if enforcement does not act swiftly.

May I request the following.

1. That the Enforcement Team immediately review whether there is a breach of planning control, particularly in relation to conditions which have not been discharged but where works are underway.

2. That the Council consider issuing a Temporary Stop Notice or alternatively a Stop Notice, as continuing works are causing or will cause irreparable harm if not monitored.

3. That an officer report / briefing note be prepared and circulated to the Chair of the Planning Committee and members of the Planning Committee & Ward Councillors before the next Planning Committee meeting on the 7th of October outlining the enforcement status, recommended actions, and whether to defer any further works pending compliance. An update at the meeting would be welcome.

I believe these steps align with the Local Enforcement Plan and the Town Planning Enforcement Policy, as well as the Council's Customer Charter. Given the scale of Astley Business Park and its impact, prompt action is warranted.

Please acknowledge receipt and advise what actions are being taken and expected timescales if any.

Regards
Councillor Gerrard

Hi [redacted]

Here's a response for you…

A Wigan Council spokesperson said: "We remain in dialogue with the group and fully acknowledge the concerns raised regarding the development. Our commitment is to continue working with both the group and the developer to address these issues wherever possible.
"We are confident that the decision to grant planning permission aligns with national planning policy. Nonetheless, to ensure additional transparency, we have agreed to commission an independent audit of the planning process.

Further information:
The final plans incorporate landscaping intended to screen, soften the appearance, and mitigate effects on nearby properties. As part of recent discussions with the developer they have agreed to bring the tree planting schedule forward to November this year rather than Spring 26.

Kind regards,

[redacted]

Message / Comment: Good morning, I'm a reporter at SWNS and have been following up on the ongoing story about the large warehouse development in Tyldesley - and the recent resignation of Cllr James Fish from Wigan Council's planning committee. Cllr Fish told the Bolton News and the Local Democracy Reporting Service that he was the only member to vote against the Tyldesley warehouse plans and that he has now stepped down, citing frustration with the planning system. He also claimed that some councillors have since said privately they "didn't realise how tall the warehouses were going to be" and "wish they'd voted against it". Could the council provide a response to Cllr Fish's resignation and concerns about the planning process, as well as any details of whether a review of procedures is being considered? Best regards, [redacted]

Hi [redacted]

Here you go…

Re: Cllr Fish and the planning process

A Wigan Council spokesperson said: “We acknowledge the comments of Cllr Fish following his decision to resign from the Planning Committee.
“It is important to reiterate that elected members receive introductory and regular training and guidance to enable them to make sound decisions in line with local and national planning policy.
“They also have the opportunity during the committee meeting to ask questions and request site visits to ensure they fully understand all aspects of the development they are making a decision on. This includes matters such as the scale and potential impact of developments in local areas.
“If a member doesn’t feel equipped to make these decisions, then they should raise this during the meeting where officers can provide additional clarity and information to ensure members are fully supported. No members raised such concerns during the committee meeting.”

Re: the petition and calls for independent investigation

A Wigan Council spokesperson said: “We remain in dialogue with the group and fully acknowledge the concerns raised regarding the development. Our commitment is to continue working with both the group and the developer to address these issues wherever possible.
"We are confident that the decision to grant planning permission aligns with national planning policy. Nonetheless, to ensure additional transparency, we have agreed to commission an independent audit of the planning process.
"It is also important to clarify that several statements contained within the petition are inaccurate. In the interests of transparency, we would encourage these to be amended to accurately reflect the facts.”

Further information:

The final plans incorporate landscaping intended to screen, soften the appearance, and mitigate effects on nearby properties. As part of recent discussions with the developer they have agreed to bring the tree planting schedule forward to November this year rather than Spring 26.

Best wishes,

[redacted]

I've also just been made aware of this petition - https://www.change.org/p/suspend-astley-warehouses-launch-independent-review-of-wigan-council-planning-department

It's calling for an independent investigation into Wigan Council planning department's handling of the Astley Business Park warehouse development, if the authority also wanted to respond to those concerns in any statement.

Best regards,
[redacted]

Hello,

I'm a producer for Granada Reports. On our programme today we're covering the Astley Business Park controversy.

Residents say the huge warehouses continue to take shape, just a stone's throw from their gardens, and they are determined to fight for them to be taken down. They say they are unable to sell their homes, or had thousands of pounds knocked off the value. The families are meeting with Andy Burnham this afternoon to voice their concerns.

Is anyone from the council available for an interview today? If not, please could you provide your latest statement on the issue so we can include it in our coverage.

Many thanks,

[redacted]

Hi [redacted]

I'm taking this over from my colleague [redacted]
I'd really need a statement as soon as possible please.
As [redacted] mentioned local residents are really concerned.
We'll be speaking to numerous people who have described the situation as 'soul destroying'.
As you probably know there is a meeting with Andy Burnham and the residents scheduled this week.
If there is any way you could reconsider our bid that would be greatly appreciated.
Please do let me know.
We will be broadcasting this item between 0700 and 0800 and between 0900 and 0930.
And so there is ample broadcasting opportunities to include the council within our coverage.
Thanks ever so much.
Best wishes,
[redacted]

Hi [redacted]

For full transparency, we are chatting to a few residents on the Henford estate today (several seem alarmed by the scale of the warehouse).

we'd likely want a council spokesperson to explain the planning process and how the impact on residents will be mitigated.

Not got a definitive time just yet but we're on air from 6 AM.
My colleague [redacted] (cc'd in this email) will be able to confirm a specific time a bit later.

Hope this helps.

Thanks,

Good morning !

[redacted] here - a journalist at BBC Breakfast.
I've tried the press office numbers listed on the Wigan.gov website but all keep going to vodafone.. I just wondered if someone might be able to help me?

On our programme tomorrow morning we are looking into the warehouse that has gone up behind the Henford Estate in Tyldesley (Wigan).
I understand it's a PLP development.
I was hoping someone from the council might speak to us LIVE about the project (and the impact on residents)?

Hope to hear from you soon.

Best wishes,
[redacted]

Subject: RE: FAQs - Astley warehouse

Update from BBC Breakfast:

I'd really need a statement as soon as possible please.
As [redacted] mentioned local residents are really concerned.
We'll be speaking to numerous people who have described the situation as 'soul destroying'.
As you probably know there is a meeting with Andy Burnham and the residents scheduled this week.
If there is any way you could reconsider our bid that would be greatly appreciated.
Please do let me know.
We will be broadcasting this item between 0700 and 0800 and between 0900 and 0930.
And so there is ample broadcasting opportunities to include the council within our coverage.

Subject: BBC Breakfast: Tyldesley development

Hello,

Apologies for not sharing this earlier- BBC Breakfast will be doing a piece on the warehouses tomorrow morning.

Here is our statement:

A spokesperson for Wigan Council said :

"While the decision to grant planning permission is consistent with national planning policy, we recognise and understand the concerns expressed by residents. We are committed to engaging constructively to address these issues wherever possible and to ensure that residents' voices are heard throughout this process.

"To that end, we are maintaining open and ongoing communication with the developer and will be seeking further assurances and detailed responses in relation to the matters raised by local residents. Our priority is to work together to find practical solutions and to minimise any adverse impact on the community."

For info:
The final plans incorporate landscaping intended to screen, soften the appearance, and mitigate effects on nearby properties. As part of recent discussions with the developer they have agreed to bring the tree planting schedule forward to November this year rather than Spring 26.

Many thanks,

[redacted]

Re: That's TV Request - Right of Reply

From [redacted]
Date Wed 2025-10-22 2:40 PM
To [redacted] Chief Exec Public Relations <pr@wiganmbc.gov.uk>

Hi [redacted]

Have got a response for you below.

Thanks,
[redacted]

A Wigan Council spokesperson said: “This application went through our planning consultation and committee process, which included letters being sent to neighbouring properties.

“The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.

“We will continue to monitor the site throughout construction, ensuring this development brings new jobs and investment to the area is delivered properly.”

Background information:

- *This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.*
- *Ahead of this Planning Committee meeting, letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of around 70 addresses in the area. All objections raised were fully considered during the decision-making process.*
- *Local authority officers have been on site and are in close communication with the developer and their construction partner to ensure all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, and will continue to do so throughout the duration of the development.*

Good morning,
I'm a reporter with **That's TV Manchester**. We're preparing a segment for **Freeview Channel 7** about residents' concerns over the industrial development behind the **Henford Estate in Tyldesley**, currently under construction by PLP (part of Peel Group).
Residents have told us the project has had a severe impact on their quality of life and that they feel **consultation and engagement by the council were inadequate**, with some saying they were unaware of the full scale of the approved plans.
We'd like to give Wigan Council a **right of reply** to ensure our coverage is balanced. Specifically, we'd appreciate your response to:

1. Claims that **residents were not fully consulted** or informed about the scale of the approved development.
2. How the council is **monitoring the ongoing construction** to ensure planning conditions are met.
3. Any measures being implemented to **mitigate the impact** on neighbouring properties (screening, landscaping, etc.).

If possible, please provide a response or statement by **3:30pm today.**

Please let me know if Mr. Aidan Thatcher or another spokesperson is available for a short on-camera or phone interview.
Best regards,

[redacted]

RE: Online meeting between Aiden Thatcher, David Proctor and residents of the Astley Business Park Residents Action Group

From [redacted]
Date Fri 2025-10-17 3:35 PM
To [redacted] Chief Exec Public Relations <pr@wiganmbc.gov.uk>

Hi [redacted]

On point one, we will not be commenting on this. Here is a statement regarding the application and the wider process:

A Wigan Council spokesperson, said: “This planning application went through our planning consultation and committee process.
“The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
“We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly.”
Ends

On point two and Cllr Eastoe’s comments, here are a few points for context:

- There were two new members of planning committee for 2024.
- All new members of the committee are required to undertake mandatory training prior to being able to participate in committee meetings.
- At the start of the 24/25 municipal year, existing members of the committee were offered the opportunity to attend a refresher training session.

Many thanks,

[redacted]

Subject: Online meeting between Aiden Thatcher, David Proctor and residents of the Astley Business Park Residents Action Group

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi there, a video of the above meeting was shown at last meeting of the residents' action group. I am informed that Mr Thatcher and Mr Proctor were not informed that the meeting was being recorded. However, as it has now been shown in front of about 300 people and in

front of TV cameras from GB News, we consider that it is now in the public domain and therefore we can report its contents. Would Wigan council like to comment on the following:

1. The accusation from members of the group that the planning officers and the committee 'fucked up'.

2. Cllr Jess Eastoe's comments which are as follows: "There are people on the plannign committee who regret the decision [to approve the application]. The application was decided after James Grundy had announced his decision not to stand in the General Election and there were new councillors on the planning committee following the May local elections in 2024. I'm so unhappy with the leadership of the planning team. They've not gone out of their way to be helpful and they completely lack empathy."

Please can you indicate if you wish to comment on the above? My deadline for this is 4pm today. Please feel free to call me if you wish to discuss.

Hello,
I work for Granada Reports, the ITV regional news programme in the North West and we're returning to the subject of the Asley Warehouses tomorrow,
We have spoken to a number of residents who tell us they are now suffering with breathing difficulties and asthma since the building work began.
You may be aware that this matter is also being investigated by the Environment Agency.
Can you confirm please if the council is aware of these issues? Do you have anyone available for interview? We'll be back in the area tomorrow and perhaps an officer or councillor would be willing to tour the estate with my reporter and camera - that would be great if possible.
Let me know your thoughts,

Hi [redacted]

Here's a statement for you…

A Wigan Council spokesperson said: "Local authority officers - including environmental protection air quality specialists - have been on-site and are in close communication with the developer and their construction partners.
"This is to ensure that all conditions of the Construction Environmental Management Plan (CEMP) are being followed and adhered to, both for the development itself and while it is being built.
"We would encourage any residents who are concerned about any aspects of how the site is being delivered to report via our website."

Further information:

- *If residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times, and we will investigate where appropriate.*
- *The construction company has responsibilities to monitor conditions on site and will therefore be better placed to comment on day-to-day issues.*

Best wishes,

Re: Tyldesley warehouses

From [redacted]
Date Mon 2025-10-13 5:31 PM
To [redacted]
Cc Chief Exec - Public Relations <pr@wiganmbc.gov.uk>

Hi [redacted]

Thanks for your patience on this. Have got an approved statement for you below:

A Wigan Council spokesperson said: "This application went through our planning consultation and committee process, which included letters being sent to neighbouring properties.

"The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.

"We will continue to monitor the site throughout construction, ensuring this development brings new jobs and investment to the area is delivered properly."

For context and timeline:

- *Any questions around damage caused by the building works are to be discussed by the construction company and the residents/their insurance. It wouldn't be appropriate for the Council to be involved in those conversations.*
- *The Council is only able to take 'material planning considerations' into account when assessing planning applications, in line with national legislation. Potential changes to house prices is not included.*
- *This land was allocated as employment land in 2006, in the Council's 'Unitary Development Plan, and is an extension of Astley Business Park with this development expected to create around 500 on-site jobs, and another estimated 460 across Greater Manchester.*
- *The first 'outline planning application' went to Planning Committee in 2017. Permission was granted to the principle of industrial development on this site, but this did not set the final size or layout of the buildings. We appreciate that this part of the planning process may have caused some misunderstanding of what had been permitted on the site at this point in time.*
- *The full planning application went to Committee in June 2024, at which point the size, footprint and height of the units was set and agreed. There has been no fundamental change to those since permission was granted. Agenda for Planning Committee on Tuesday, 11th June, 2024, 2.00 pm*
- *In line with policy and national legislation, ahead of this Planning Committee meeting, letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of around 70 addresses in the area. All objections raised were fully considered during the decision-making process.*

Press Query – Biodiversity Investment to Bedford Colliery

From [redacted]
Date Wed 2025-10-08 9:19 AM
To Chief Exec Public Relations <pr@wiganmbc.gov.uk>

Some people who received this message don't often get email from [redacted] Learn why this is important

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Good morning,

I am a student currently on work placement with the Wigan Observer and am looking into a possible article regarding a biodiversity fund linked to the Astley warehouse development.

A local campaign/pressure group (@astleywarehouseaction) has claimed that £199,000 from PLP, given as a condition of planning approval and allocated to the "Bedford Colliery" biodiversity site, appears not to have been spent by the council.

Could you please clarify what has happened to this money? Has work begun and people just haven't noticed yet or has it yet to be spent? If the latter is the case, when will locals begin to see the difference and what form will the work take?

Thank you in advance for your help and I look forward to hearing from you soon.

Yours faithfully

[redacted]

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi,
Hope this email finds you well.
I'm one of the team that works on BBC Radio 4's You & Yours, a consumer and lifestyle programme.
We are working on an item around large warehouses, or mega sheds as they are also known, and plan on that being on air Wednesday 8th of October. The item will feature audio with residents from and around the Henford Estate in Tyldesley, discussing their concerns and issues around the current PLP warehouse development. This will be part of a larger item around warehouse development in the UK.

We would like to invite a spokesperson from Wigan Council on to the programme to discuss the development with us, as well as discussing the concerns of residents.
If there isn't a spokesperson available, could we please get a statement addressing the concerns of residents, as well as addressing the following areas – our deadline is 5pm Tuesday 7th October 2025:

1. When did PLP first submit plans to develop the site and how have they been changed and altered to arrive at the plans that were granted permission by Wigan that are in current development?
2. Overall, how many plans have PLP submitted for permission on the site, been granted by Wigan Council, but lapsed?
3. How were residents informed about all PLP planning applications (regardless of outcome) and methods for them to engage?
4. Was any additional outreach to residents given after the 2015 granted planning permission lapsed, and new plans were submitted?
5. How many complaints were issued against the granted 2015 PLP plans?
6. How many complaints did the current PLP development have?
7. In the process of Wigan Council granting permission for the current plans in development what consideration and process was given to the impact on residents during and after development – mental and physical health, property damage and value, and general disruption to their lives, the environmental impact, impact on education and health of pupils at Garrett Hall Primary School, and loss, and local infrastructure?
8. The residents group Astley Warehouse Action are claiming that the submitted plans by PLP do not show a true representation of the housing in that area – how does Wigan

Council respond?
9. Residents have claimed their properties have been damaged by these works - how does Wigan Council respond?
10. Residents are claiming that this has drastically reduced the value of their properties and making them difficult to sell - how does Wigan Council respond?
11. Residents claim that over 100 people complained about the PLP development by Wigan Council have only reported 70 - how does Wigan Council respond?
12. How are Wigan Council currently helping the residents impacted by the PLP development?

I am happy to discuss this over the phone if you wish.

Many thanks,

[redacted]

Cc: [redacted]
Subject: Enquiry: Tyldesley warehousing development

Good afternoon,

We have received the enquiry below regarding the warehouses, a request for a 'stop notice' and complaints regarding air quality.

Here is the suggested response:
A Wigan Council spokesperson, said: "Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built.
"We will be meeting with residents later this week to discuss the development and their concerns."

For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.

- Work is ongoing on the landscaping and construction of the bund.
- We have had no reports of people experiencing breathing difficulties, but if residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times.
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

Ends

Our current deadline to respond is 4pm today- apologies for the short notice- please could you let me know if there are any issues with the above asap?

Many thanks,

[redacted]

Subject: Tyldesley warehousing development

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi there, I understand that Cllr Stuart Gerrard has emailed Wigan council officers to request that a stop notice be put on the Tyldesley warehousing development as a number of families with young children are experiencing breathing difficulties.

He says: "The scale and size of the scheme are not what was presented in the original planning application, and the required bunds and screening have not been implemented in advance as stipulated."

He wants the work to be halted while the council, developer and residents get round a table to plot the best way forward.

Comment on this by 4pm today, please. If you need more time, please let me know.

Hello,

I've just been chatting to [redacted] on the phone, who advised to contact you detailing our discussion.

It's in regards to the warehouses in Tyldesley. I know when we first reported on this a couple of weeks ago you very kindly gave us a statement.

I'm sure you're well aware this is being picked up by the nationals now too and I just feel like it would be really good to hear from either Cllr Molyneux or Cllr Prescott to put the record straight.

We can do this as a sit down interview, but I just fear the longer we don't hear from someone the worse it's going to get.

We'd need to do this asap ideally. Do you think this can be arranged?

I'm available to chat over any other details. My number is [redacted].

Many thanks,

[redacted]

Outlook

Warehouses

From [redacted]
Date Fri 2025-09-05 1:07 PM
To [redacted] Chief Exec Public Relations <pr@wiganmbc.gov.uk>

Hi [redacted]

As discussed with [redacted] please see below:

Aidan Thatcher, director for place at Wigan Council, said: “This planning application went through our planning consultation and committee process.
“The final plans include landscaping which will help to screen and soften the appearance, and mitigate the impact on nearby properties.
“We will continue to monitor the site throughout construction, ensuring this development bringing new jobs and investment to the area is delivered properly.”

Ends

For context:

- This land has been allocated as employment land since 2006.
- The outline planning application for this site approved the principle of industrial development on this site, which is an extension of Astley Business Park, in 2017.
- The outline planning permission did not set final size or layout of the buildings, but we appreciate this planning process may be the cause of some of the confusion.
- The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.
- Ahead of this letters were sent to 99 neighbouring properties, site notices were displayed, and a press notice was published in the Leigh Journal. The application received approximately 100 individual responses from the residents of approximately 70 addresses in the area. All objections raised were fully considered during the decision-making process.
- The development will create around 500 on-site jobs, and another estimated 460 across Greater Manchester.

Thanks,

[redacted]

Hi Aidan, [redacted] and Sonia,

Hope you're well.

One of the residents who lives at one of the properties at Henford Estate in Tyldesley appeared on This Morning to talk about the construction site that has been put up behind his house. He has claimed that the letters of objection were ignored and it has impacted the prices of the properties.

I was wondering if you would like to add any comment to the piece, or if you would be able to put me in the right direction on who would be able to.

Thanks so much

Hello there, I hope you're well?

We'd like to request an interview/statement from Wigan Council about concerns residents have raised about planning permission that's been granted for four warehouses in Astley. Residents say that the plans were changed from low level units to something completely different without them being informed or given an opportunity to oppose them. They're concerned about the impact the size and proximity of the warehouses will have on residents houses, view and livelihoods.

Please can we request an interview or statement tomorrow.

Cc: [redacted]
Subject: TV: BBC North West- Astley Warehouses

Good morning,

For information, we have had an enquiry from BBC North West regarding the construction of four warehouses in Astley and resident's complaints that they are not reflective of what was agreed in the planning permission:

"Residents say that the plans were changed from low level units to something completely different without them being informed or given an opportunity to oppose them. They're concerned about the impact the size and proximity of the warehouses will have on residents houses, view and livelihoods."

I am agreeing a statement with the Planning team and Aidan, which I will share once finalised but it is a tight deadline as they are planning to cover this on the news this lunchtime and tonight, so I wanted to let you know in advance.

Many thanks,

[redacted]

If you could help with a response that would be great?

Thanks
[redacted]

Absolute scum bags you lot are with what you doing to the Henford estate in tydlesley or however the hell you spell it, you should be ashamed of your selves ruining a lovely little street with them massive warehouses. If it was me living there I'd find out who you are and make it so it's a nightmare to live where you are by any means possible, imagine if it was you who was living on that street now with your house being ruined and the value of it being destroyed.

When are you going to address the absolute cock up you have made approving the monstrous industrial units just off chaddock lane? Sold the local residents down the river

Its terrible what you have done with Astley warehouses. Ruining innocent families and lives when you should actually be helping people and making their lives better. How do you sleep at night. Pathetic.

Re: Tyldesley warehousing development

From [redacted]
Date Wed 2025-10-01 09:24
To [redacted]

Morning [redacted]

Thanks for your patience, have got the OK from the final director this morning. Here you go:

A Wigan Council spokesperson, said: “Our teams have been on-site and are in close communication with the developer and their construction partners to ensure that all conditions are being followed and adhered to, both for the development itself and while it is being built.
“We will be meeting with residents later this week to discuss the development and their concerns.”

For context:

- A stop notice is a tool that the Council has to prevent development continuing where there is evidence of a breach of planning control. In this instance, while we understand the concerns being expressed, there is no evidence of such a breach and so the Council has no basis to serve a stop notice at this time.
- Work is ongoing on the landscaping and construction of the bund.
- If residents believe that the required dust control measures are not being followed, they can report this via our website with details of dates and times, and we will investigate where appropriate.
- The construction company has responsibilities to monitor conditions on site- so they will be better placed to comment on day-to-day issues.
- This planning application went through our planning consultation and committee process. The full planning application went to committee in June 2024, which set out the size, footprint and height of the units and there has been no fundamental change to those since permission was granted.

CAUTION External E-Mail: Take extra care before clicking links, attachments and actioning requests. Think Before you Click

Hi there, I understand that Cllr Stuart Gerrard has emailed Wigan council officers to request that a stop notice be put on the Tyldesley warehousing development as a number of families with young children are experiencing breathing difficulties.

He says: "The scale and size of the scheme are not what was presented in the original planning application, and the required bunds and screening have not been implemented in advance as stipulated."

He wants the work to be halted while the council, developer and residents get round a table to plot the best way forward.

Comment on this by 4pm today, please. If you need more time, please let me know.
