Request	Response
1. Does your local authority currently use, or is it currently piloting, any such systems within Housing Services? If yes, for each system, please provide: the name of the system/software; the supplier/vendor; whether it is currently in use or being piloted.	1. The Council does not currently use, nor is it piloting, any Artificial Intelligence (AI) systems within Housing Services for predicting homelessness, assessing housing need, allocating housing, matching applicants to properties, identifying housing fraud, predicting tenancy risk, or other housing-related decision-making functions. The Council does utilise a number of housing management systems to administer housing services. However, these systems operate through standard data processing, business rules and officer-led decision making and are not considered Artificial Intelligence systems for the purposes of this request.
2. What is each system used for? Please indicate whether it is used for any of the following: predicting homelessness or identifying households for early intervention; assessing or prioritising housing need or vulnerability; housing register or social housing allocation decisions; matching applicants to properties; allocating or placing households in temporary accommodation; predicting rent arrears, tenancy risk or tenancy sustainment; identifying housing fraud; repairs, maintenance or property management; any other related purpose (please specify).	2. N/A
3. Does the system produce a score, ranking, recommendation, match or flag that is used to inform a decision about an individual or household? If yes, please briefly state what decision it informs.	3. N/A
