Request	Response
1. Current GIS data Please provide your current native Public Rights of Way dataset, or a Council-controlled download or feed, in a reusable GIS format such as Shapefile, GeoPackage or GeoJSON. Please include the snapshot date, available classifications and field/code definitions, particularly for Byways Open to All Traffic and Restricted Byways.	The requested information is exempt from disclosure under Section 43(2) of the Freedom of Information Act 2000, which applies where disclosure would, or would be likely to, prejudice the commercial interests of any person or organisation. The Council considers that disclosure of this information would be likely to enable third parties to commercially exploit the data, including for the development, marketing, or resale of products and services. Releasing the information into the public domain could undermine the value of the information and prejudice the commercial interests of those involved in its creation, maintenance, and use. In applying the public interest test, the Council recognises the general public interest in openness and transparency. However, in this instance, the Council considers that the public interest in protecting legitimate commercial interests outweighs the benefits of disclosure. Disclosure would provide limited additional transparency regarding the Council's functions while creating a risk of commercial exploitation of the information for private gain.
2. Dataset licence Please confirm the licence and version that apply to the supplied geometry and attributes, including whether the Open Government Licence (OGL) applies. I am seeking permission for the commercial processing, adaptation and hosted/offline redistribution described above. If another licence applies, please provide its terms and any conditions.	See response at Q1
3. Attribution and exclusions What Council/Ordnance Survey attribution and disclaimers are required? Please confirm any necessary OS-derived-data permissions or exemptions, and identify any excluded fields or third-party material.	See response at Q1
4. Updates and download access Are there separate website, portal or download terms, registration requirements or charges? Is occasional automated downloading of updates permitted with caching and appropriate request limits, and does the same licence cover subsequent releases?	See response at Q1

5. Published TRO information Is the Traffic Regulation Order information published on your website, including linked notices and orders, also reusable for commercial restriction summaries in the application? Please confirm the applicable licence/version, scope, required attribution and any separate conditions or exclusions. If another team handles this, I would be grateful if you could forward that part of the enquiry.	See response at Q1
I may later operate the application through a newly formed company. Please also confirm whether the licence would cover that company and technical service providers acting on my or its behalf. If permission is individual-specific rather than an open licence, would fresh permission or consent to transfer it be required?	See response at Q1
