

# We need your help!

## Project Overview

We are a small group recently relocated to the Brunswick Recreation club. We have a woodworking shed and are looking to get a crafting shed up and running soon. We are supporting veterans and their families, also the local community, to combat social isolation, bring people together and support mental health.

## What support is needed:

We need help and advice on either installing solar power or a small wind turbine to provide power and lighting to the sheds and some way of heating the sheds for year round use. We have no experience of these things so any help and advice would be appreciated very much.

## Community Skills Workshop CIC

## What difference it would make to our project?

It would enable us to work all year round and be as self-sufficient as possible. Having a source of power and heating would help us to be able to have full use of the sheds all year round.
